**Multimodal Literacies Across Digital Learning Contexts** Maria Grazia Sindoni,Ilaria Moschini.2021-11-29 This collection critically considers the question of how learning and teaching should be conceived, understood, and approached in light of the changing nature of learning scenarios and new pedagogies in this current age of multimodal digital texts, practices, and communities. The book takes the concept of digital artifacts as being composed of multiple meaning-making semiotic resources, such as visuals, music, and design, as its point of departure to explore how diverse communities interact with these tools and develop and explore their understanding of digital practices in learning contexts. The first section of the volume examines different case studies in which involved participants learn to grapple with the introduction of digital tools for learning in children's early years of schooling. The second section extends the focus to secondary and higher education settings as digital learning tools grow more complex as do students, parents, and teachers' interactions with them and the subsequent need for new pedagogies to rethink these multimodal artifacts. A final section reflects on the implications of new multimodal tools, technologies, and pedagogies for teachers, such as on teacher training and community building among educators. In its in-depth look at multimodal approaches to learning as meaning-making in a digital world, this book will be of interest to students and scholars in multimodality, English language teaching, digital communication, and education.

**EcoKids** Dan Chiras.2005-06-01 To forge a sustainable future, we need citizens who care for the Earth. We need citizens who understand that planet care is the ultimate form of self-care. But we also need generations who live according to their values and convictions and who can effect positive change in their lives and the lives of others. Because public schools and the popular media cannot be counted on to produce an Earth-friendly citizenry, the task falls to parents. Yet even aware parents often lack the understanding and resources to take on such a task. EcoKids addresses this gap by presenting a coherent plan that will help parents foster love for nature, teach children the importance of environmental protection, and promote environmental values and inspire action - actions that will last a lifetime. A hopeful and inspiring guide for parents, topics covered include ways to: avoid gloom and doom in favor of positive solutions foster love and empathy for nature develop environmental values put values into action help children discover the roots of problems and be part of lasting solutions walk the talk counter the consumer culture, starting in your own home and community generate hope and combat apathy. Each chapter includes an inspiring case study of a child who's making a difference, short pieces that highlight serious problems such as global warming, along with positive solutions that can be read aloud to children, and activities for children. A resource guide lists helpful books, articles, videos, and organizations.

**Greening through IT** Bill Tomlinson.2012-02-10 How the tools of information technology can support environmental sustainability by tackling problems that span broad scales of time, space, and complexity. Environmental issues often span long periods of time, far-flung areas, and labyrinthine layers of complexity. In Greening through IT, Bill Tomlinson investigates how the tools and techniques of information technology (IT) can help us tackle environmental problems at such vast scales. Tomlinson describes theoretical, technological, and social aspects of a growing interdisciplinary approach to sustainability, "Green IT," offering both a human-centered framework for understanding Green IT systems and specific examples and case studies of Green IT in action. Tomlinson describes many efforts toward sustainability supported by IT—from fishers in India who maximized the sales potential of their catch by coordinating their activities with mobile phones to the installation of smart meters that optimize electricity use in California households—and offers three detailed studies of specific research projects that he and his colleagues have undertaken: EcoRaft, an interactive museum exhibit to help children learn principles of restoration ecology; Trackulous, a set of web-based tools with which people can chart their own environmental behavior; and GreenScanner, an online system that provides access to environmental-impact reports about consumer products. Taken together, these examples illustrate the significant environmental benefits that innovations in information technology can enable.
