Sorted Books Nina Katchadourian. 2013-02-08 A witty and thought-provoking collection of visual poems constructed from stacks of books. Delighting in the look and feel of books, conceptual artist Nina Katchadourian's playful photographic series proves that books' covers—or more specifically, their spines—can speak volumes. Over the past two decades, Katchadourian has perused libraries across the globe, selecting, stacking, and photographing groupings of two, three, four, or five books so that their titles can be read as sentences, creating whimsical narratives from the text found there. Thought-provoking, clever, and at times laugh-out-loud funny (one cluster of titles from the Akron Museum of Art's research library consists of: Primitive Art /Just Imagine/Picasso/Raised by Wolves), Sorted Books is an enthralling collection of visual poems full of wry wit and bookish smarts. Praise for Sorted Books "Katchadourian's project . . . takes on a weight beyond its initial novelty. It's a love letter to books, book collecting and the act of reading." —San Francisco Chronicle "As a longtime fan of [Katchadourian's] long-running Sorted Books project I'm thrilled for the release of Sorted Books—a collection spanning nearly two decades of her witty and wise minimalist mediations on life by way of ingeniously arranged book spines. . . . In an era drowned in periodic death tolls for the future of the physical book, her project stands as a celebration of the spirit embedded in the magnificent materiality of the printed page." —Brain Pickings "Katchadourian's stacks possess an understated sophistication; they are true to the intimate nature of books and yet reveal their dramatic features and unexpected potential." —Publishers Weekly

Highlights in Condensed Matter Physics and Future Prospects Leo Esaki.2013-11-27 This volume contains the proceedings of the first NATO Science Forum Highlights of the Eighties and Future Prospects in Condensed Matter Physics (sponsored by the NATO Scientific Affairs Division), which took place in September, 1990, in the pleasant surroundings provided by the Hotel du Palais at Biarritz, France. One hundred distinguished physicists from seventeen countries, including six Nobellaureates, were invited to participate in the four and a half day meeting. Focusing on three evolving frontiers: semiconductor quantum structures, including the subject of the quantumHall effect (QHE), high temperature superconductivity (HiTc) and scanning tunneling microscopy (STM), the Forum provided an opportunity to evaluate, in depth, each of the frontiers, by reviewing the progress made during the last few years and, more importantly, exploring their implications for the future. Though serious scientists are not prophets, all of the participants showed a strong interest in this unique format and addressed the questions of future prospects, either by extrapolating from what has been known, or by a stretch of their educated imagination.
