External Embeddedness of Subsidiaries Swantje Hartmann. 2011 In the research fields of International Business and International Management it is stated that product innovations are not only developed by headquarters (HQs) but also by foreign subsidiaries. Subsidiaries thereby apply the knowledge they obtain in inter-organizational business relationships with stakeholders like customers, suppliers, competitors, research institutions or governmental organizations. After being finished, product innovations are either exclusively employed by the creative subsidiaries or they are also transferred in intra-organizational business relationships to other units of the MNC, i. e. HQs or other subsidiaries. This book deals with both the product innovation process in foreign subsidiaries and the innovation transfer process to other units of the MNC. Using the example of the pharmaceutical industry it demonstrates which stakeholders affect the development of a product innovation. For the first time, stakeholders, business relationships and knowledge flows are analyzed at each stage of the product innovation process. The study proves that during the innovation process different stakeholders - other than the often analyzed customers and suppliers - play a crucial role for the foreign subsidiary. Above that, the book depicts the sophisticated structures and processes that MNCs in the pharmaceutical industry have established to transfer the newly created product innovations within their companies. The book addresses researchers and students in the fields of International, Strategic or Innovation Management that are interested in inter-organizational and intra-organizational embeddedness and knowledge flows of MNCs. It is also helpful for managers to

control product innovation and transfer processes and the related business relationships and knowledge flows.

Ethics, Aesthetics and the Historical Dimension of Language Hans-Georg Gadamer.2022-02-10
Ethics, Aesthetics and the Historical Dimension of Language collects together Gadamer's most important untranslated writings on ethics, aesthetics and language. With a substantial introduction by the editors exploring Gadamer's ethical project and providing an overview of his aesthetic work, this book collects Gadamer's writings on ancient ethics, including the moral philosophy of Aristotle, and on practical philosophy (first section). In the second section, Gadamer's writings on art are collected, including his examination of poetry, opera and painting among other art forms. The third section comprises Gadamer's essays on language in its historical dimension. This important collection is a useful resource for scholars in philosophy, studying hermeneutics, continental, 20th-century and German philosophy.

Discovery and Invention Charles T. Stewart Jr..2019-06-12 The history of humanity can be written in terms of discovery and invention. They are very different cognitive processes—search for order and problem solving. This book is a search for explanation of the Scientific and Industrial Revolutions. It surveys seven civilizations in terms of both their achievements and their failures. What were the characteristics they shared that promoted progress? What prevented or discouraged progress in discovery and or in invention? Sumer was creative, the mother of civilizations. Egypt was not. In Sumer, authority was divided, and it was a trading economy. Egypt was authoritarian and closed. Rome and Islam inherited the Greek legacy. Rome was not interested; it had a different agenda. Islam progressed, but civilization conflicted with religion and then regressed. China led in inventions but then stagnated and always lagged in discovery. Its ultimate failure has multiple explanations that include the scope of authority, structure of society and economy, and of language and script. But so was its preference for intuition over logic or evidence as the method of seeking the truth. It is Greek capacity for abstraction origin a mystery that was essential for its achievements: discoveries of the structure of the universe and the cognitive approach to truth seeking. Much invention was a byproduct of discovery. It is Greek achievements in discovery and abstract reasoning that Europe adopted and advanced, leading to the scientific and subsequent industrial revolutions. Ours is a new phase in human history. What were some of its consequences, and what are its prospects?

Patent Management and Valuation Grid Thoma.2016-06-23 Research on patent valuation has become increasingly important in academic and policy circles in the last few decades. In part, this is the outcome of the wide consensus that innovation is a crucial ingredient for growth at various

levels. On the other hand, there has also been an overcoming of growth models unilaterally focused on technological-oriented approaches. This book presents novel and original research on patent value determinants, which are intrinsic or extrinsic to the innovator's business model. Grid Thoma has undertaken a long study on the strategic factors affecting patent valuation, bringing extensive quantitative evidences across various geographical and institutional contexts. Beforehand, the valuation of the patent real options is appraised when the innovator can postpone the additional investment required for the patent's successful exploitation. Then, he analyses what other complementary IP strategies are combined with patenting that in turn directly affect the value of patents. Moreover, the book scrutinizes the so-called 'strategic patenting' hypothesis according to which innovators obtain patents for other reasons beyond gaining IP protection. A second order of strategic factors affecting the value of patents resides at the outset of the invention process. These are constituted by knowledge spillovers, which are typically mediated by the local geographical context where the invention process takes place. The analysis shows that the contribution of knowledge spillovers from business and nonbusiness organizations to the value of the patented R&D constitutes a relevant aspect for an innovator's decision making. This thoughtful, cutting-edge research book is vital reading for researchers, academics, and policy decision makers in the area of in market valuation, management of technology, innovation management, and economic geography.

Patricia Johanson and the Re-invention of Public Environmental Art, 1958-2010 Xin

Wu.2013 Impeccably researched and richly detailed, this book addresses the issue of translation between visual arts and landscape design in the 50-year career of American painter and environmental artist Patricia Johanson. Exploring the artist's search for an art of the real as a member of the postwar New York art world, it demonstrates that visual translation cannot be

understood solely through the works of art, instead attention must be paid to the process of creation. This book is an insightful attempt to confront a crucial question in the history of art through the work of a contemporary artist.

The Dimension Machine Rudi Merom.2011-01-01 The Dimension Machine is different than a time machine. With a time machine you can travel to the past or the future. Traveling to the future or past does not guarantee changing anything. It s more like observing events. With a time machine when you come back to the present you know the future to come and you can try to change it. With a Dimension machine you open a door in the future. You bend the future time and you bring it to the present. You not only see the future as in time travel but you bring the future to you and live in it.

Time travel is more a straight line like from point A to point B similar to the 3D world. You travel through the many layers of time fabric in a straight line. While in a Dimension machine you can choose to open any layer of future time and live in it. You function as today. The future is today. You still have a past, present and future. There are people that can see the future. These are time travelers. There are people that can make the future. They are the ones that can bend time and connect with other dimensions. There are people that can see an invention and there are people that can make an invention. There are people that can see/hear the music and there are people that can create the music. With a dimension machine you can skip events as you bend time. With a Dimension machine you can avoid negative events that could happen. Each event has multi-dimensions as an option. Each option will have a different outcome and with a dimension machine you can choose one scenario out of all possibilities. You can do all this when you know how a dimension machine works

Behavior and Culture in One Dimension Dennis Waters.2021-03-08 Behavior and Culture in One Dimension adopts a broad interdisciplinary approach, presenting a unified theory of sequences and their functions and an overview of how they underpin the evolution of complexity. Sequences of DNA guide the functioning of the living world, sequences of speech and writing choreograph the intricacies of human culture, and sequences of code oversee the operation of our literate technological civilization. These linear patterns function under their own rules, which have never been fully explored. It is time for them to get their due. This book explores the one-dimensional sequences that orchestrate the structure and behavior of our three-dimensional habitat. Using Gibsonian concepts of perception, action, and affordances, as well as the works of Howard Pattee, the book examines the role of sequences in the human behavioral and cultural world of speech, writing, and mathematics. The book offers a Darwinian framework for understanding human cultural

evolution and locates the two major informational transitions in the origins of life and civilization. It will be of interest to students and researchers in ecological psychology, linguistics, cognitive science, and the social and biological sciences.

Dimensions of Learning Teacher's Manual, 2nd ed. Robert J. Marzano, Debra J.

Pickering. 2011-05-01 The premise of *Dimensions of Learning* an instructional framework founded on the best of what researchers and theorists know about learning is that five types, or dimensions, of thinking are essential to successful learning. These are (1) positive attitudes and perceptions about learning, (2) thinking involved in acquiring and integrating knowledge, (3) thinking involved in extending and refining knowledge, (4) thinking involved in using knowledge meaningfully, and (5) productive habits of mind. *Dimensions of Learning* is a valuable tool for reorganizing curriculum, instruction, and assessment. The authors discuss each of the five dimensions in detail and describe hundreds of teaching strategies that support them for example, how to help students construct meaning for declarative knowledge, internalize procedural knowledge, and see the relevance of what they are expected to learn. The authors provide many examples at the elementary and secondary classroom levels. Teachers of grades K-12 can use this information to improve teaching and learning in any content area. The Third Dimension of Invention E.W. Bliss Co.1948

The Invention of Time and Space Patrice F. Dassonville.2016-09-30 This investigation of time and space is motivated by gaps in our current understanding: by the lack of definitions, by our failure to appreciate the nature of these entities, by our inability to pin down their properties. The author's approach is based on two key ideas: The first idea is to seek the geo-historical origins of time and space concepts. A thorough investigation of a diversified archaeological corpus, allows him to draft coherent definitions; it furthermore gives clues as to whether time and space were discovered or invented. The second idea is to define the units before trying to define space and time. The results presented here are unexpected: Time and space were not discovered in nature, but they were invented; time is not a phenomenon and space has no materiality; they are only concepts. This runs contrary to the opinion of most scientific and the philosophical authorities, although one would seek in vain for a theoretical validation of the conventional position. This book will provide much food for thought for philosophers and scientists, as well as interested general readers.

Innovation—The Missing Dimension Richard K. Lester,Michael J. Piore.2004 Amid mounting concern over the loss of jobs to low-wage economies, one fact is clear: America's prosperity hinges on the ability of its businesses to continually introduce new products and services. But what makes for a creative economy? How can the remarkable surge of innovation that fueled the boom of the 1990s be sustained? For an answer, Richard K. Lester and Michael J. Piore examine innovation strategies in some of the economy's most dynamic sectors. Through eye-opening case studies of new product development in fields such as cell phones, medical devices, and blue jeans, two fundamental processes emerge. One of these processes, analysis-rational problem solving-dominates management and engineering practice. The other, interpretation, is not widely understood, or even

recognized--although, as the authors make clear, it is absolutely crucial to innovation. Unlike problem solving, interpretation embraces and exploits ambiguity, the wellspring of creativity in the economy. By emphasizing interpretation, and showing how these two radically different processes can be combined, Lester and Piore's book gives managers and designers the concepts and tools to keep new products flowing. But the authors also offer an unsettling critique of national policy. By ignoring the role of interpretation, economic policymakers are drawing the wrong lessons from the 1990s boom. The current emphasis on expanding the reach of market competition will help the analytical processes needed to implement innovation. But if unchecked it risks choking off the economy's vital interpretive spaces. Unless a more balanced policy approach is adopted, warn Lester and Piore, America's capacity to innovate--its greatest economic asset--will erode.

Renewing Cities Ross J. Gittell. 2014-07-14 The cities of Lowell and New Bedford in Massachusetts, Jamestown in New York, and McKeesport in Pennsylvania have all undergone years of adversity and decline, their economic bases having been badly damaged by structural changes in the national economy, particularly in the manufacturing sector. In situations like these, can local development efforts make a difference? Ross Gittell answers in the affirmative. This interdisciplinary work focuses on comparative case studies of the four cities. The book reveals how public, private, and community-based local economic development initiatives affect local economic performance: what works and what does not work. City leaders and institutions can help reorganize and reshuffle local resources, with results that include increased investment, greater effort by local individuals and institutions, more cooperation among different development interests, and improvement in city economic positioning relative to the regional economy and local development cycles. Gittell emphasizes the possibility of shifting from a zero-sum game (attracting jobs from elsewhere) toward the goal of

converting underutilized local resources to higher-value uses through alternative forms of economic and political organization. Originally published in 1992. "Patricia Johanson and the Re-Invention of Public Environmental Art, 1958?010 " Xin Wu.2017-07-05 Impeccably researched and richly detailed, this book addresses the issue of translation between visual arts and landscape design in the 50 more years career of Patricia Johanson, an important artist in the second half of the twentieth-century. Examining the artist?s search for an art of the real as a member of the post-World War II New York art world, and how such pursuit has led her from painting and sculpture to public garden and environmental art, Xin Wu argues for the significance of the process of art creation, challenging the centrality of art objects. This book is an insightful study to confront a crucial question in the history of art through the work of a contemporary artist. It therefore converses with art historians and critics alike, as well as advanced readers of twentieth-century art. Following Johanson's artistic development, from its formation in the 1960s American art scene to the very present day, across the fields of art,

architecture, garden, civil engineering and environmental aesthetics, it investigates the process of creation in a transdisciplinary perspective, and reveals a view of art as a domain of exploration of key issues for the contemporary world. The artist's concept of nature is highlighted, and particular impacts of Chinese aesthetics and thought unveiled. Based on extensive analysis of unpublished private archives, Xin Wu offers us the first ever comprehensive scholarly interpretation of Patricia Johanson's oeuvre, including drawings, paintings, sculptures, installations, garden proposals, and built and unbuilt projects in the United States, Brazil, Kenya, and Korea.

Edison Paul Israel. 1998-09-07 From the preeminent Edison scholar . . . The definitive life of the inventor of the modern age The conventional story is so familiar and reassuring that it has come to read more like American myth than history: With only three months of formal education, a curious and hardworking young man beats the odds and becomes one of the greatest inventors in history. Not only does he invent the phonograph and the first successful electric light bulb, but he also establishes the first electrical power distribution company and lays the technological groundwork for today's movies, telephones, and sound recording industry. Through relentless tinkering, by trial and error, the story goes, Thomas Alva Edison perseveres-and changes the world. In the revelatory Edison: A Life of Invention, author Paul Israel exposes and enriches this one-dimensional view of the

solitary Wizard of Menlo Park, expertly situating his subject within a thoroughly realized portrait of a burgeoning country on the brink of massive change. The second half of the nineteenth century witnessed the birth of corporate America, and with it the newly overlapping interests of scientific, technological, and industrial cultures. Working against the common perception of Edison as a symbol of a mythic American past where persistence and individuality yielded hard-earned success, Israel demonstrates how Edison's remarkable career was actually very much a product of the inventor's fast-changing era. Edison drew widely from contemporary scientific knowledge and research, and was a crucial figure in the transformation of invention into modern corporate research and collaborative development. Informed by more than five million pages of archival documents, Paul Israel's ambitious life of Edison brightens the unexamined corners of a singularly influential and triumphant career in science. In these pages, history's most prolific inventor-he received an astounding 1,093 U.S. patents-comes to life as never before. Edison is the only biography to cover the whole of Edison's career in invention, including his early, foundational work in telegraphy. Armed with unprecedented access to Edison's workshop diaries, notebooks, and letters, Israel brings fresh insights into how the inventor's creative mind worked. And for the first time, much attention is devoted to his early family life in Ohio and Michigan-where the young Edison honed his entrepreneurial sense and eye for innovation as a newsstand owner and editor of a weekly newspaper-underscoring the inventor's later successes with new resonance and pathos. In recognizing the inventor's legacy as a pivotal figure in the second Industrial Revolution, Israel highlights Edison's creation of the industrial research laboratory, driven by intricately structured teams of researchers. The efficient lab forever changed the previously serendipitous art of workshop invention into something regular, predictable, and very attractive to corporate business leaders.

Indeed, Edison's collaborative research model became the prototype upon which today's research firms and think tanks are based. The portrait of Thomas Alva Edison that emerges from this peerless biography is of a man of genius and astounding foresight. It is also a portrait rendered with incredible care, depth, and dimension, rescuing our century's godfather of invention from myth and simplification. Advance Praise for Edison: A Life of Invention Familiar Edison stories come alive with fresh insight . . . Israel's scholarship is impeccable while his deceptively easy grace transforms a challenging story into a page turner. One hundred years of history texts have been right all along. Thomas Edison, a protean actor on the American landscape, requires our attention. Paul Israel has given us a book to satisfy that requirement for a long time to come.- John M. Staudenmaier, S.J., Editor, Technology and Culture

Theoretical Studies in Computer Science Jeffrey D. Ullman. 2014-05-10 Theoretical Studies in Computer Science focuses on the field of theoretical computer science. This book discusses the context-free multi-languages, non-membership in certain families of context-free languages, and single tree grammars. This text likewise covers the datalog linearization of chain queries, expressive power of query languages, and object identity and query equivalences. Other topics include the unified approach to data and meta-data modification for data/knowledge bases, polygon clipping algorithms, and convex polygon generator. This publication is intended for computer scientists and researchers interested in theoretical computer science.

That Other Hemingway James D. Brasch.2009-11-25 *That Other Hemingway* provides a referenced handbook to accompany Hemingway's online Library (11981) as it demonstrates Hemingway's dependence on his massive library as a basis for what he called invention, in the manner of Henry James, Cezanne, and Tolstoy. The insights of his personal Doctor (Herrera) and his long-standing correspondence with Malcolm Cowley and Bernard Berenson reveal his desperate loneliness in Cuba and allow him an opportunity to analyze and promote his own theory of fiction. All three sources are not available to critics or the general public, this discussion provides profound insight into the last twenty years of his previously ignored life in Cuba.

Cyber-Physical-Social Intelligence Hai Zhuge.2020-11-12 This book explores next-generation artificial intelligence based on the symbiosis between humans, machines and nature, including the rules and emerging patterns of recognition, and the integration and optimization of various flows through cyberspace, physical space and social space. It unveils a reciprocal human-machine-nature symbiotic mechanism together with relevant rules on structuring and evolving reality, and also proposes a multi-dimensional space for modelling reality and managing the methodologies for exploring reality. As such it lays the foundation for the emerging research area cyber-physical-social intelligence. Inspiring researchers and university students to explore the development of intelligence and scientific methodology, it is intended for researchers and broad readers with a basic understanding of computer science and the natural sciences. Next-generation artificial intelligence will extend machine intelligence and human intelligence to cyber-physical-social intelligence rendered by various interactions in cyberspace, physical space and social space. With the transformational development of science and society, a multi-dimensional reality is emerging and evolving, leading to the generation and development of various spaces obeying different principles.

A fundamental scientific challenge is uncovering the essential mechanisms and principles that structure and evolve the reality emerging and evolving along various dimensions. Meeting this challenge requires identifying the basic relations between humans, machines and nature in order to reveal the cyber-physical-social principles.

Managing Innovation Sven B. Lundstedt, E. William Colglazier. 2013-10-22 *Managing Innovation: The Social Dimensions of Creativity, Invention and Technology* focuses on the relationship between inventions and innovations with industrial development and economic advancement. The book stresses the point that advancement in industries and economy can be more successful when these are in balance. Containing the works of various authors, the book proceeds by highlighting the social dimension of invention and innovation. The role of the government in the promotion of innovations

and inventions is also noted. The book also reiterates the point that human factors have definitely affected innovation and productivity. This stance is supported by the discussion on a case study in labor-management cooperation. Inventions and innovations in the social dimension are also established to be related with industrial productivity. The book also touches upon how education has influenced the advancement of technology in Japan. The text is best suited to those who are interested in pushing the role of inventions and innovations in shaping the society.

Political Responsibility Antonio Y. Vázquez-Arroyo. 2016-05-03 Scholars in the humanities and social sciences have turned to ethics to theorize politics in what seems to be an increasingly depoliticized age. Yet the move toward ethics has obscured the ongoing value of political responsibility and the vibrant life it represents as an effective response to power. Sounding the alarm for those who care about robust forms of civic engagement, this book fights for a new conception of political responsibility that meets the challenges of today's democratic practice. Antonio Y. Vázquez-Arroyo forcefully argues against the notion that modern predicaments of power can only be addressed ethically or philosophically through pristine concepts that operate outside of the political realm. By returning to the political, the individual is reintroduced to the binding principles of participatory democracy and the burdens of acting and thinking as a member of a collective. Vázquez-Arroyo historicizes the ethical turn to better understand its ascendance and reworks Adorno's dialectic of responsibility to reassert the political in contemporary thought and theory.

Rice Research in Asia Robert Eugene Evenson, Robert W. Herdt, Mahabub Hossain. 1996 In order to achieve economic efficiency, research organizations have established rigorous, quantitative methods for priority setting. One such organization, the Rockefeller Foundation, has drawn on this

report to help determine the research goals it should emphasize in its funding. A review of the problem of priority setting is presented followed by a discussion of approaches that have been used previously. Several chapters demonstrate how a number of areas of plant science research have contributed to gains in rice productivity and also assess the current challenges of genetic improvement and pest control. The economic framework for priority setting and previous methods are reviewed, followed by a series of country case studies which provide more practical applications.

Fiction, Invention and Hyper-reality Carole M. Cusack, Pavol Kosnáč. 2016-11-18 The twentieth century was a period of rapid change for religion. Secularisation resulted in a dramatic fall in church attendance in the West, and the 1950s and 1960s saw the introduction of new religions including the International Society for Krishna Consciousness (ISKCON), the Church of Scientology, and the Children of God. New religions were regarded with suspicion by society in general and Religious Studies scholars alike until the 1990s, when the emergence of a second generation of 'new new' religions – based on popular cultural forms including films, novels, computer games and comic books – and highly individualistic spiritualities confirmed the utter transformation of the religio-spiritual landscape. Indeed, Scientology and ISKCON appeared almost traditional and conservative when compared to the radically de-institutionalised, eclectic, parodic, fun-loving and experimental fiction-based, invented and hyper-real religions. In this book, scholarly treatments of cutting-edge religious and spiritual trends are brought into conversation with contributions by representatives of Duddism, the Church of All Worlds, the Temple of the Jedi Order and Tolkien spirituality groups. This book will simultaneously entertain, shock, challenge and delight scholars of religious studies, as well as those with a wider interest in new religious movements.
