Mt Stromlo Observatory Ragbir Bhathal, Ralph Sutherland, Harvey Butcher. 2013-12-02 This book tells the story of the Mt Stromlo Observatory in Canberra which began with W.G. Duffield's idealism and vision in 1905. The Observatory began life as a government department, later becoming an optical munitions factory producing gun sights and telescopes during the Second World War, before changing its focus to astrophysics – the new astronomy. In the ensuing years programs were introduced to push the Observatory in new directions at the international frontiers of astronomy. The astronomers built new, better and larger telescopes to unravel the secrets of the universe. There were controversies, exciting new discoveries and new explanations of phenomena that had been discovered. The Observatory and its researchers have contributed to determining how old the universe is, participated in the largest survey of galaxies in the universe, and helped to show us that the universal expansion is accelerating – research that led to Brian Schmidt and his international team being awarded the 2011 Nobel Prize in Physics. These and other major discoveries are detailed in this fascinating book about one of the great observatories in the world.

It is not by chance that Menachem Kellner has devoted so much to the study of Gersonides. Like Gersonides, Kellner has firmly in hand the knowledge of the Bible and of the traditional literature of Judaism, he is well trained in philosophy and science, and his broad interests make him the best and most penetrating champion of a great philosopher and an outstanding student of human thought. Teaching with Harry Potter Valerie Estelle Frankel.2013-02-06 The Harry Potter phenomenon created a surge in reading with a lasting effect on all areas of culture, especially education. Today, teachers across the world are harnessing the power of the series to teach history, gender studies, chemistry, religion, philosophy, sociology, architecture, Latin, medieval studies, astronomy, SAT skills, and much more. These essays discuss the diverse educational possibilities of J.K. Rowling's books. Teachers of younger students use Harry and Hermione to encourage kids with disabilities or show girls the power of being brainy scientists. Students are reading fanfiction, splicing video clips, or exploring Rowling's new website, Pottermore. Harry Potter continues to open new doors to learning.

Griffith Park E. J. Stephens,Marc Wanamaker.2011 Carved from the former Spanish land grant known as Rancho Los Feliz, Griffith Park, a rugged, 4,300-acre wilderness located in the heart of Los Angeles, has been the principal playground for Angelenos for over a century. Since 1896, when the land was donated to the city by controversial philanthropist Col. Griffith J. Griffith, generations of weekenders have picnicked, camped, golfed, ridden horses, hiked, bicycled, and played ball in the park. To this day, visitors still climb aboard its mini-train and merry-go-round and explore its zoo, museums, amphitheater, and world-famous observatory. The park, which lies in the shadow of the Hollywood sign, has been a frequent filming site for legendary movies like Back to the Future, Birth of a Nation, and Rebel Without a Cause.

An Introduction to Practical Astronomy W. Pearson.1829
Report on the Work of the Adelaide Observatory Adelaide
Observatory.1932

The Telescope in the Ice Mark Bowen.2017-11-14 IceCube
Observatory, a South Pole instrument making the first actual
observations of high-energy neutrinos, has been called the
“weirdest” of the seven wonders of modern astronomy by
Scientific American. In *The Telescope in the Ice*, Mark Bowen
tells the amazing story of the people who built the instrument and
the science involved. Located near the U. S. Amundsen-Scott
Research Station at the geographic South Pole, IceCube is unlike
most telescopes in that it is not designed to detect light. It
employs a cubic kilometer of diamond-clear ice, more than a mile
beneath the surface, to detect an elementary particle known as
the neutrino. In 2010, it detected the first extraterrestrial high-
energy neutrinos and thus gave birth to a new field of astronomy.
IceCube is also the largest particle physics detector ever built. Its
scientific goals span not only astrophysics and cosmology but also
pure particle physics. And since the neutrino is one of the
strangest and least understood of the known elementary
particles, this is fertile ground. Neutrino physics is perhaps the
most active field in particle physics today, and IceCube is at the
forefront. *The Telescope in the Ice* is, ultimately, a book about
people and the thrill of the chase: the struggle to understand the
neutrino and the pioneers and inventors of neutrino astronomy.

promoting constructive discussions between the actors of this science ? the astronomers, meteorologists, physicists of the atmosphere and the experts in adaptive optics and interferometry techniques whose main goal is to correct, in real-time, the wavefront perturbations induced by atmospheric turbulence to restore at the telescope foci the best available image quality.

Astronomy: A Physical Perspective Marc L. Kutner.2003-07-31

This fully revised and updated text is a comprehensive introduction to astronomical objects and phenomena. By applying some basic physical principles to a variety of situations, students will learn how to relate everyday physics to the astronomical world. Starting with the simplest objects, the text contains explanations of how and why astronomical phenomena occur, and how astronomers collect and interpret information about stars, galaxies and the solar system. The text looks at the properties of stars, star formation and evolution; neutron stars and black holes; the nature of galaxies; and the structure of the universe. It examines the past, present and future states of the universe; and final chapters use the concepts that have been developed to study the solar system, its formation; the possibility of finding other planetary systems; and the search for extraterrestrial life. This comprehensive text contains useful equations, chapter summaries, worked examples and end-of-chapter problem sets.

advances in technology: large-scale detector arrays, new designs for cooling in space, lightweight mirror technologies. Scientific cases for observing the cold universe are outstanding.

Observations in the FIR/Submm range will provide answers to such fundamental questions as: What is the spectrum of the primordial fluctuations? How do primeval galaxies look? What are the first stages of star formation? Most of the international space missions that have been triggered by these questions are presented in detail here. Technological issues raised by these missions are reviewed, as are the most recent achievements in cooling and detector technologies.

throughout the Universe. By bringing our understanding of other galaxies nearly up to our understanding of our own, the Modern Universe Space Telescope could illuminate how the chemical elements are created and dispersed, how normal galaxies form and evolve, and how stars and planetary systems form.

Generation-X mission could detect the first black holes formed when the Universe was only a few hundred million years old.

Advanced Compton Telescope is a wide-field gamma-ray spectrometer designed to uncover how supernovae and other stellar explosions create the chemical elements through an all-sky survey of nuclear line emissions. Far-Infrared/Submillimeter Interferometer in Space would use a two-element array to study the formation of the earliest-born stars and galaxies in the Universe and to probe the structure of the disks of gas and dust collapsing today to form a new generation of stars and planets.

Single Aperture Far Infrared Observatory would be a single-spacecraft large space telescope for observing the early chemical history of the Universe and the structure of young planetary systems, tracking the chemistry needed for life from interstellar clouds to young solar systems. A final chapter describes an analysis of directions for future technology development inspired by this portfolio of mission concepts.--Publisher description.

Observatory Daragh Carville.2014-02-14 A gothic science-fiction thriller, *Observatory* details the entangled lives of four people across two centuries *Observatory* is set at the Armagh Observatory and Museum for Astronomy and Natural Philosophy, in both 1799 and 1999. Historian Jon McKenna, hired to compile a computerised catalogue of the Observatory archives, finds his life becoming entangled with that of Nicola McLoughlin, assistant astronomer at the Observatory. Together they work to uncover the two-hundred-year-old story of astronomer Archibald Hamilton and his assistant Robert Hogg - man of science, man of God, and revolutionary. The Observatory, a symbol of both science and religion, becomes the setting for a powerful exploration of nationhood and revolution, love and betrayal. Big and Bright David S. Evans,John Derral Mulholland.1986-10 By day, every year over 40,000 visitors pour in. Across the Rio Grande, a hundred miles away, Mexican mountaineers use the white domes as landmarks. By night, perched almost 7,000 feet above the sleeping, earthbound world, astronomers probe the secrets of the night sky. This is the University of Texas McDonald Observatory, one of the world's largest university-operated astronomical installations. Big and Bright: A History of the McDonald Observatory is the story of a remarkable collaboration between two major universities, one a prestigious private school, the other a growing southwestern state institution. The University of Chicago had astronomers, but its Yerkes Observatory was aging and underfunded; the University of Texas had money for an observatory but no working astronomer to staff it. Out of their mutual need, they formed a thirty-year compact for a joint venture. Unusual in its day, the Yerkes-McDonald connection presaged the future. In this arrangement, one can see some of the beginnings of today's consortium big science. Now the McDonald Observatory's early history can be put in proper perspective. Blessed with a gifted and driving founding director, the world's (then) second-largest telescope, and an isolation that permitted it to be virtually the only major astronomical observatory that continued operations throughout World War II, the staff of McDonald Observatory helped lay the foundations of modern astrophysics during the 1940s. For over a decade after the war, a lonely mountaintop in West Texas was the mecca that drew nearly all the most important astronomers from all over the world. Based on personal reminiscences and archival material, as well as published historical sources, Big and Bright is one of the few

Jesuit Meteorologists - Forgotten Men Frank Le

Blancq.2022-12-14 The Jesuits made important contributions to the development of science, including meteorology, particularly by establishing observatories in various countries during the 19th century including Jersey. However, over the years the contribution of the observatories and the highly intelligent and dedicated scientists who worked in them have been neglected and largely forgotten. This work aims to put the principles of the Jesuit order into scientific context, then outlines the career and contribution to meteorology of one individual in particular, Père Marc Dechevrens. He arrived at the Zi-ka-weï Observatory in Shanghai, China in 1873 and was its Director from 1875 until 1887. Later he came to Jersey where he was Director of the Maison St. Louis Observatory for the 30 years from 1894 until 1923. This work is a revised and much expanded version of an unpublished paper written in 2005.

The Evolution of Galaxies Marc Sauvage,Grazyna Stasinska,D. Schaerer.2013-06-29 Galaxies have a history. This has become clear from recent sky surveys which have shown that distant galaxies, formed early in the life of the Universe, differ from the nearby ones. New observational windows at ultraviolet, infrared and millimetric wavelengths (provided by ROSAT, IRAM, IUE, IRAS, ISO) have revealed that galaxies contain a wealth of components: very hot gas, atomic hydrogen, molecules, dust, dark matter ... A significant advance is expected due to new instruments (VLT, FIRST, XMM) which will allow one to explore the most distant Universe. Three Euroconferences have been planned to punctuate this new epoch in galactic research,
