Global Perspectives of Nanoscience and Engineering Education Kurt Winkelmann, Bharat Bhushan. 2016-06-28 This book presents the perspectives of nanotechnology educators from around the world. Experts present the pressing challenges of teaching nanoscience and engineering to students in all levels of education, postsecondary and informal environments. The book was inspired by the 2014 NSF workshop for Nanoscience and Engineering Education. Since nanotechnology is a relatively new field, authors present recommendations for designing nanotechnology education programs. The chapters describe methods to teach specific topics, such as probe microscopy, size and scale, and nanomaterial safety, in classrooms around the world. Other chapters describe the ways that organizations like NNIN and the NISE Network have influenced informal nanotechnology education. Information technology plays a growing role in all types of education and several chapters are devoted to describing ways how educators can use online curricula for teaching nanotechnology to students from preschool to graduate school.

Superação de um Obstáculo Epistemológico Alexandre Geraldo Viana Faria,Maria Celina Piazza Recena.2020-04-30 O conceito de Obstáculo Epistemológico é bastante conhecido em ciências, especialmente no ensino de Química. Gaston Bachelard, epistemólogo francês que propôs esse conceito, incomodado com entraves que impedem o progresso das ciências, descreveu em detalhes como esses obstáculos foram se estabelecendo ao longo do tempo e como poderemos identificá-los. Porém não foi objeto de sua investigação a ruptura e a transposição desses obstáculos, a qual nos daria uma sensação de que a obra desse pensador estaria por ser acabada. É justamente nessa questão que este livro pretende colaborar. Aqui, não só descrevemos a identificação de um obstáculo, conforme a epistemologia de Bachelard, como demonstramos a sua fragilização e posterior superação.

Explore Atoms and Molecules! Janet Slingerland.2017-04-11 Atoms and molecules are the basic building blocks of matter. Matter is every physical thing around us in the universe, including our own bodies! In Explore Atoms and Molecules! With 25 Great Projects, readers ages 7 to 10 investigate the structure of atoms and learn how atoms fit together to form molecules and materials. If everything is made out of atoms and molecules, why do people look different from dogs and doorknobs? In Explore Atoms and Molecules, readers discover that the characteristics of a material are determined by the way the atoms and molecules connect, and study how chemical reactions change these connections to create everything we know. This book discusses the elements on the periodic table and why they are grouped into families, encouraging the exploration of meaningful classification systems. States of matter and mixtures and compounds round out the exploration of atoms and molecules! This book supports the maker movement with lots of hands-on activities that illuminate the concepts of chemistry. Readers build 3-D models of molecules and create a periodic table guessing game. Fascinating sidebars offer opportunities for readers to connect the text with real-world science, and cartoon illustrations provide a fun foundation for learning.

Chemistry in Primetime and Online National Research Council, Division on Earth and Life Studies, Board on Chemical Sciences and Technology, Chemical Sciences Roundtable. 2011-08-01 It is critical that we increase public knowledge and understanding of science and technology issues through formal and informal learning for the United States to maintain its competitive edge in today's global economy. Since most Americans learn about science outside of school, we must take advantage of opportunities to present chemistry content on television, the Internet, in museums, and in other informal educational settings. In May 2010, the National Academies' Chemical Sciences Roundtable held a workshop to examine how the public obtains scientific information informally and to discuss methods that chemists can use to improve and expand efforts to reach a general, nontechnical audience. Workshop participants included chemical practitioners (e.g., graduate students, postdocs, professors, administrators); experts on informal learning; public and private funding organizations; science writers, bloggers, publishers, and university communications officers; and television and Internet content producers. Chemistry in Primetime and Online is a factual summary of what occurred in that workshop. Chemistry in Primetime and Online examines science content, especially chemistry, in various informal educational settings. It explores means of measuring recognition and retention of the information presented in various media formats and settings. Although the report does not provide any conclusions or recommendations about needs and future directions, it does discuss the need for chemists to connect more with professional writers, artists, or videographers, who know how to communicate with and interest general audiences. It also emphasizes the importance of formal education in setting the stage for informal interactions with chemistry and chemists.

New York's Nanotechnology Model Committee on Competing in the 21st Century: Best Practice in State and Regional Innovation Initiatives, Board on Science, Technology, and Economic Policy, Policy and Global Affairs, National Research Council. 2013-11-28 New York's Nanotechnology Model: Building the Innovation Economy is the summary of a 2013 symposium convened by the National Research Council Board on Science, Technology, and Economic Policy and members of the Nano Consortium that drew state officials and staff, business leaders, and leading national figures in early-stage finance, technology, engineering, education, and state and federal policies to review challenges, plans, and opportunities for innovation-led growth in New York. The symposium participants assessed New York's academic, industrial, and human resources, identified key policy issues, and engaged in a discussion of how the state might leverage regional development organizations, state initiatives, and national programs focused on manufacturing and innovation to support its economic development goals. This report highlights the accomplishments and growth of the innovation ecosystem in New York, while also identifying needs, challenges, and opportunities. New York's Nanotechnology Model reviews the development of the Albany nanotech cluster and its usefulness as a model for innovation-based growth, while also discussing the New York innovation ecosystem more broadly.

The PSI Handbook of Virtual Environments for Training and Education [3 volumes] Joseph V. Cohn,Dylan Schmorrow,Denise Nicholson.2008-11-30 The increasingly complex environment of the 21st century demands unprecedented knowledge, skills and abilities for people from all walks of life. One powerful solution that blends the science of learning with the technological advances of computing is Virtual Environments. In the United States alone, the Department of Defense has invested billions of dollars over the past decade to make this field and its developments as effective as possible. This 3-volume work provides, for the first time, comprehensive coverage of the many different domains that must be integrated for Virtual Environments to fully provide effective training and education. The first volume is dedicated to a thorough understanding of learning theory, requirements definition and performance measurement, providing insight into the human-centric specifications the VE must satisfy to succeed. Volume II provides the latest information on VE component technologies, and Volume III offers discussion of an extensive collection of integrated systems presented as VE use-cases, and results of effectiveness evaluation studies. The text includes emerging directions of this evolving technology, from cognitive rehabilitation to the next generation of museum exhibitions. Finally, the handbook offers a glimpse into the future with this fascinating technology. This groundbreaking set will interest students, scholars and researchers in the fields of military science, technology, computer science, business, law enforcement, cognitive psychology, education and health. Topics addressed include guidance and interventions using VE as a teaching tool, what to look for in terms of human-centered systems and components, and current training uses in the Navy, Army, Air Force and Marines. Game-based and long distance training are explained, as are particular challenges such as the emergence of VE sickness. Chapters also highlight the combination of VE and cybernetics, robotics and artificial intelligence.
