Destination Mars Andrew May.2017-07-06 Mars is back. Suddenly everyone – from Elon Musk to Ridley Scott to Donald Trump – is talking about going to the Red Planet. When the Apollo astronauts walked on the Moon in 1969, many people imagined Mars would be next. However NASA's Viking 1, which landed in 1976, was just a robot. The much-anticipated crewed mission failed to materialise, defeated by a combination of technological and political challenges. Four decades after Viking and almost half a century after Apollo technology has improved beyond recognition – as has politics. As private ventures like SpaceX seize centre stage from NASA, Mars has undergone a seismic shift – it's become the prime destination for future human expansion and colonisation. But what's it really like on Mars, and why should anyone want to go there? How do you get there and what are the risks? Astrophysicist and science writer Andrew May answers these questions and more, as he traces the history of our fascination with the Red Planet.

Last Stand Todd Wilkinson,Ted Turner.2013-03-21 Entrepreneur and media mogul Ted Turner has commanded global attention for his dramatic personality, his founding of CNN, his marriage to Jane Fonda, and his company's merger with Time Warner. But his green resume has gone largely ignored, even while his role as a pioneering eco-capitalist means more to Turner than any other aspect of his legacy. He currently owns more than two million acres of private land (more than any other individual in America), and his bison herd exceeds 50,000 head, the largest in history. He donated \$1 billion to help save the UN, and has recorded dozens of other firsts with regard to wildlife conservation, fighting nukes, and assisting the poor. He calls global warming the most dire threat facing humanity, and says that the tycoons of the future will be minted in the development of green, alternative renewable energy. Last Stand goes behind the scenes into Turner's private life, exploring the man's accomplishments and his motivations, showing the world a fascinating and flawed, fully three-dimensional character. From barnstorming the country with T. Boone Pickens on behalf of green energy to a pivotal night when he considered suicide, Turner is not the man the public believes him to be. Through Turner's eyes, the reader is asked to consider another way of thinking about the environment, our obligations to help others in need, and the grave challenges threatening the survival of civilization.

Forces of Nature Barry A. Vann.2012-03-20 As long as the human species has existed, men and women have had to contend with the unpredictable forces of nature. Geographer Barry A. Vann brings a unique perspective to this age-old struggle in this illuminating overview of human population shifts and their precarious relationship with climate change and geography. Vann takes us on a journey along the migration routes of the earliest modern humans and tells why our ancestors chose to settle down in places that can be best described as natural utopias. In the religiously oriented worldview of ancient peoples, such places took on a sacred aura of divine favor. Similarly, destructive events such as volcanic eruptions and earthquakes were interpreted as expressions of divine wrath. Vann shows how the ancient texts of the Bible and the Qur'an offer glimpses of past climates that were distinctly different from the climate of our time. He also discusses the rise of technology as a means of controlling the threatening features of the natural world. Though technology has enabled humanity to cope with hostile climates, it has also created a false sense of security. Vann notes that population clusters are increasing in dangerous areas and that no technology can protect vulnerable groups from major-category hurricanes, tornadoes, or earthquakes. Finally, he considers our current anxieties regarding global warming, pointing out that this focus has obscured a good deal of historical and geological evidence for a return of another ice age. The Forces of Nature offers a challenging perspective on the precarious balance between fragile human communities and their often-threatening environments.

Planet Quest John Beavers.2017-06-27 The Alpha Physics Enterprise has grown and evolved in its scope and charter. It has embraced the ultimate in globalization and off-shoring. I guess it should be called galaxization and off-planeting. This move also warrants a name change. Our group now becomes the Beta Physics Enterprise--partly because of major step to finding goldilocks planets but mostly because BPE is more businesslike than APE.The quest is for a planet among the fabulous clouds of the Orion Nebula, over a thousand light years away. A small team of Vertex Riders continue to pioneer the galaxy for planets large enough to provide the magnetosphere to plant a one to two hundred light-year hop, called a Parabolic Portal. Yet, the planet must be small enough to plant the equipment on the polar surface without crushing the planters. Their little planet of Glisterra doesn't provide much in the way of building materials and industry is too new for their colony--but there is enough gold in them there hills to buy all they need from Earth. The trick is to maintain absolute secrecy. That is not an easy trick when so much can go wrong.The quest is for planets but also for life. Instead of listening for unnatural radio signals on Earth, BPE can actually go out and search for them, as well as get their hands dirty doing it. Both journeys drive their mission into danger and discovery.

Earth Energies Serge Kahili King.2015-06-15 Examinations and accounts of experimentation with subtle energies. In addition to the scientifically accepted forces of electricity, magnetism, and gravity, there are, according to the author, psychoenergetic forces, those that interact with the mind as well as the body. His research deals with the energies behind extraordinary phenomena like non-physical healing, levitation, telekinesis,

superstrength, and many others in which the mind is always an important factor. He touches on pyramid power, dowsing, feng shui, and the use of magnets for healing. These, and many more sources may have a single energy in common; the same way different physical elements all have electrons in common. Leave skepticism behind, and be fascinated by his examples and observations that may someday prove to be of practical value, and no more strange than bread mold being used to cure disease.

Planetary Dreams Robert Shapiro.2008-05-02 The Quest To Discover Life Beyond Earth. The 'dreams' that I write of are not the usual ones, the images that come up in our minds involuntarily during certain stages of sleep, but rather the hopes and expectations that we have lavished upon other worlds around us.-from the Preface. The surprisingly long history of debate over extraterrestrial life is full of marvelous visions of what life out there might be like, as well as remarkable stories of alleged sightings and heated disputes about the probability that life might actually have arisen more than once. In *Planetary Dreams*, acclaimed author Robert Shapiro explores this rich history of dreams and debates in search of the best current answers to the most elusive and compelling of all questions: Are we alone? In his pursuit, he presents three contrasting views regarding how life might have started: through Divine Creation, by a highly unlikely stroke of luck, or by the inevitable process of a natural law that he terms the Life Principle. We are treated to a lively fictional dinner debate among the leading proponents of these schools of thought-with the last named group arguing that life has almost surely formed in many places throughout the universe, and the others that life may well be entirely unique to our own blue planet. To set the stage for a deep exploration of the question, the author then leads us on a fantastic journey through the museum of the cosmos, an imagined building that holds models of the universe at different degrees of magnification. We then journey deep into inner space to view the astonishingly intricate life of a single cell, and learn why the origin of such a complex object from simple chemical mixtures poses one of the most profound enigmas known to science. Writing in a wonderfully entertaining style, Shapiro then reviews the competing theories about the start of life on Earth, and suggests the debate may best be settled by finding signs of life on the other worlds of our solar system. He takes us on a guided tour of the most likely sites, from the underground hot springs of Mars to the ice-covered oceans of Jupiter's airless moons. Along the way, he shares a wealth of fascinating stories about the ways in which our views of the heavens have changed, from the theories of ancient philosophers, who argued that the Moon was inhabited, to the current Origins and Astrobiology initiatives of NASA. He describes the probes that will be sent out in the near future in pursuit of the first compelling physical evidence of life beyond Earth, and concludes with a radical suggestion about how this quest might be supported through the next millennium. As we launch into an exciting new era of space exploration, *Planetary Dreams* offers a thoughtful and entertaining exploration of both the history of our hopes and expectations and a vision of a possible future in which the discovery of life elsewhere will provide a new view of our place in the universe.

The Quest Jay J. Drummond.2015-08-13 So here we are, soaring through the depths of space as if we belong here. Twelve years ago, we had no deep space program and we'd never ventured past the moons of Jupiter. We were forced into this sci-fi existence. Scientists from all around the world had warned us to take care of our fragile environment, which had already been suffering from rising sea levels and global extremes. They tried to prepare us for the consequences of neglect and the cost of our ruthless consumption of the planet's natural resources, but greed is a powerful thing, as is lack of foresight. Our planet went into a global whiteout that began during the 21st century. It was expected to cause the annihilation of all advanced life

on planet earth. In an attempt to save humanity, an enormous self-contained spaceship, lovingly christened The Enterprise, set off for the Orion nebula in January of the year 2120 in the hopes of finding an inhabitable planet to claim as our own. Able to make great leaps into the galaxy, through an induced wormhole, this vessel enabled us to be found by a Federation of different species of advanced humanoids inhabiting planets in over one hundred solar systems. We now know for sure that we are not alone in this universe. We were invited to join this federation. We also found a planet we could inhabit. There are also two dangerous and surprisingly advanced reptilian adversaries, the Palchek and the Crau, who have terrorized the Federation for several millenia. After thousands of years of this aggression, Kotar, the leader of the Federation, declares an all out war.... --Commander Robert Manning, First Mate of New Earth's Flagship, The Elusive.
