Young Children and Families in the Information Age Kelly L. Heider, Mary Renck Jalongo. 2014-12-05 This edited book presents the most recent theory, research and practice on information and technology literacy as it relates to the education of young children. Because computers have made it so easy to disseminate information, the amount of available information has grown at an exponential rate, making it impossible for educators to prepare students for the future without teaching them how to be effective information managers and technology users. Although much has been written about information literacy and technology literacy in secondary education, there is very little published research about these literacies in early childhood education. Recently, the National Association for the Education of Young Children and the Fred Rogers Center for Early Learning and Children's Media at Saint Vincent College published a position statement on using technology and interactive media as tools in early childhood programs. This statement recommends more research "to better understand how young children use and learn with technology and interactive media and also to better understand any short- and long-term effects." Many assume that today's young children are "digital natives" with a great understanding of technology. However, children may know how to operate digital technology but be unaware of its dangers or its value to extend their abilities. This book argues that information and technology literacy include more than just familiarity with the digital environment. They include using technology safely and ethically to demonstrate creativity and innovation; to communicate and collaborate; to conduct research and use information and to think critically, solve problems and make decisions.

Supporting Reading in Grades 6-12 Sybil M. Farwell, Nancy L. Teger. 2012-06-11 This book presents a curricular framework for students grades 6-12 that school librarians and teachers can use collaboratively to enhance reading skill development, promote literature appreciation, and motivate young people to incorporate reading into their lives, beyond the required schoolwork. *Supporting Reading Grades 6-12: A Guide* addresses head-on the disturbing trend of declining leisure reading among students and demonstrates how school librarians can contribute to the development of lifelong reading habits as well as improve students' motivation and test scores. The book provides a comprehensive framework for achieving this: the *READS* curriculum, which stands for Read as a personal activity; Explore characteristics, history, and awards of creative works; Analyze structure and aesthetic features of creative works; Develop a literary-based product; and Score reading progress. Each of these five components is explained thoroughly, describing how school librarians can encourage students to read as individuals, in groups, and as school communities; support classroom teachers' instruction; and connect students to today's constantly evolving technologies. Used in combination with an inquiry/information-skills model, the *READS* curriculum enables school librarians to deliver a dynamic, balanced library program that addresses AASL's Standards for the 21st-Century Learner.
