Transforming the Workforce for Children Birth Through Age 8 National Research Council,Institute of Medicine,Board on Children, Youth, and Families,Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success.2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

Middle School Matters Phyllis L. Fagell.2019-08-06 A counselor and popular Washington Post contributor offers a new take on grades 6-8 as a distinct developmental phase--and the perfect time to set up kids to thrive. Middle school is its own important, distinct territory, and yet it's either written off as an uncomfortable rite of passage or lumped in with other developmental phases. Based on her many years working in schools, professional counselor Phyllis Fagell sees these years instead as a critical stage that parents can't afford to ignore (and though middle school includes different grades in various regions, Fagell maintains that the ages make more of a difference than the setting). Though the transition from childhood to adolescence can be tough for kids, this time of rapid physical, intellectual, moral, social, and emotional change is a unique opportunity to proactively build character and confidence. Fagell helps parents use the middle school years as a low-stakes training ground to teach kids the key skills they'll need to thrive now and in the future, including making good friend choices, negotiating conflict, regulating their own emotions, be their own advocates, and more. To answer parents' most common questions and struggles with middle school-aged children, Fagell combines her professional and personal expertise with stories and advice from prominent psychologists, doctors, parents, educators, school professionals, and middle schoolers themselves.

Handbook of Children with Special Health Care Needs David Hollar.2012-07-15 Children with chronic conditions, developmental disorders, and birth defects represent a sizeable minority of American children—as many as one in five. Often their families have financial or other issues limiting their access to appropriate care, thus limiting their adult prospects as well. Compounding the problem, many valuable resources concerning this population are difficult to access although they may be critical to the researchers, practitioners, and policymakers creating standards for quality care and services. In response, the Handbook of Children with Special Health Care Needs assembles research, applied, and policy perspectives reflecting the range of children's problems requiring special services. Widely studied conditions (e.g., communication disorders, substance abuse) and those receiving lesser attention (e.g., tuberculosis) are covered, as are emerging ideas such as the “medical home” concept of continuity of care. Its interdisciplinary outlook makes the Handbook of Children with Special Health Care Needs a vital, forward-looking text for developmental

psychologists, pediatricians, early childhood and special education researchers and practitioners, disability researchers, policymakers, and advocates, and providers for children with special health care needs.

Parenting Matters National Academies of Sciences, Engineering, and Medicine,Division of Behavioral and Social Sciences and Education,Board on Children, Youth, and Families,Committee on Supporting the Parents of Young Children.2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well- being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.
