

[The Politics of Patronage](#) Benjamin Márquez.2021-07-20 Founded in 1968, the Mexican American Legal Defense and Educational Fund (MALDEF) is the Latino equivalent to the NAACP: a source of legal defense for the Latina/o community in cases centered on education, state immigration laws, redistricting, employment discrimination, and immigrant rights. Unlike the NAACP, however, MALDEF was founded by Mexican American activists in conjunction with the larger philanthropic structure of the Ford Foundation—a relationship that has opened it up to controversy and criticism. In the first book to examine this little-known but highly influential organization, Benjamin Márquez explores MALDEF’s history and shows how it has thrived and served as a voice for the Latina/o community throughout its sixty years of operation. But he also looks closely at large-scale investments of the Ford Foundation, Rockefeller Foundation, and others, considering how their ties to MALDEF have influenced Mexican American and Latinx politics. Its story crafted from copious research into MALDEF and its benefactors, this book brings to light the influence of outside funding on the articulation of minority identities and the problems that come with creating change through institutional means.

Cyclic Addition Cylinders Jeff Parker.2015-03-03 This is a sequential order of Cyclic Addition Cylinders. The first 5 Tiers for each of the 69 Common Multiples are presented tier by tier. This book is purely Whole Number and Cyclic Addition Cylinder. And goes hand in hand with the text The Complete Mathematics of the Cyclic Addition Cylinder. This allows the Mathematician to concentrate on Whole Number and refer to the english text from time to time.

[Heat Transfer 2](#) Michel Ledoux,Abdelkhalak El Hami.2021-05-04 Heat is a branch of thermodynamics that occupies a unique position due to its involvement in the field of practice. Being linked to the management, transport and exchange of energy in thermal form, it impacts all aspects of human life and activity. Heat transfers are, by nature, classified as conduction, convection (which inserts conduction into fluid mechanics) and radiation. The importance of these three transfer methods has resulted – justifiably – in a separate volume being afforded to each of them. This second volume is dedicated to radiation. After recalling photometry, the calculation of luminance is addressed using the theory of the black body and associated laws: Stefan, Wien. The reciprocal radiation of two surfaces in total influence is discussed extensively, and the case of finished surfaces is also considered. Heat Transfer 2 combines a basic approach with a deeper understanding of the discipline and will therefore appeal to a wide audience, from technician to engineer, from doctoral student to teacher-researcher.
