International Classification of Diseases for Oncology World
Health Organization.2013-12-15 The International Classification
of Diseases for Oncology (ICD-O) has been used for nearly 25
years as the standard tool for coding diagnoses of neoplasms in
tumor and cancer registrars and in pathology laboratories. ICD-O
is a dual classification with coding systems for both topography
and morphology. The topography code describes the site of origin
of the neoplasm and uses the same 3-character and 4-character

categories as in the neoplasm section of Chapter II, ICD-10. The morphology code describes the characteristics of the tumor itself, including its cell type and biologic activity. In preparing this revised edition, the editors have made a special effort to change as few terms as possible, to add new terms at empty spaces, and to avoid reuse of previously assigned codes. While all topography codes remain the same as in the previous edition, morphology codes have been thoroughly reviewed and, where necessary, revised to increase their diagnostic precision and prognostic value.
