Instrumentation, Control and Automation VIII Gustaf Olsson,Ulf Jeppsson,C. Rosen.2002-05-31 Instrumentation, control and automation (ICA) in the water industry has come a long way in the three decades since the first IAWPR workshops on the subject and is now a well established and recognised area of technology. This has resulted from a combination of factors: improvements in the capabilities of hardware and software, developments in theoretical understanding and practical applications, and a wider awareness of the power of ICA. These developments continue at pace, and so the heavyweight programme of the 8th conference in this series (the first under the banner of the International Water Association) attracted a large attendance. A central goal of the conference was to link practical operating experience with new research results on sensor technology, instrumentation, control, and automation systems. This is important in both water and wastewater treatment and transport systems, which incorporate increasingly complex measurement systems, information technology, control systems and human interaction. From the extensive programme 60 papers were selected by a thorough review procedure for these selected proceedings. Topics covers include: process control; sensors for wastewater characterization; benchmarking for control strategy development and testing; sensors for monitoring and detection; process monitoring, detection and early warning systems; process and plant-wide control approaches; modeling and simulation; network control and integrated approaches; applied control; and operational support and experiences. They provide a genuinely state-of-the-art compilation in a field of central importance to water and wastewater.

Encyclopedia of Environmental Analysis and Remediation, Volume 4 Robert A. Meyers.1998-03-23 This encyclopedia is composed of an eight-volume set that provides an overview of the field of environmental analysis. The contents are divided into major content areas including air pollution control, environmental law, and environmental sampling. The volumes are organized alphabetically with each article signed by the author(s). The individual articles begin with a summary of the topic heading and then divide the text into subtopics indicated by boldface headings. The articles are written clearly, however, the authors assume a basic knowledge of chemistry and math on the part of the reader. For example, the acid mine drainage article refers to the Arrhenius equation, but does not clarify this statement in the text. Each article contains graphs as well as pictures to illustrate points made in the text. The articles are long and provide a detailed explanation of each topic. The authors also provide a bibliography at the end of each article. Special features of the encyclopedia include a list of contributors, a table of conversion factors and a list of abbreviations and acronyms. The preface outlines the general contents of the encyclopedia. The preface also includes sections that suggest the target audience and recommended usages for the set. The final volume of the set contains an alphabetic index to the topics contained in the volumes.
