Proceedings of the 3rd Universitas Lampung International Conference on Social Sciences (ULICoSS 2022) Ryzal Perdana,Gede Eka Putrawan,Bayu Saputra,Trio Yuda Septiawan.2023-05-03 This is an open access book. The 3rd Universitas Lampung International Conference on Social Sciences (ULICoSS) 2022 (ULICoSS) 2022 is an international conference organized by the Institute for Research and Community Services, Universitas Lampung, Indonesia. The event took place on 6th - 7th September 2022 in Bandar Lampung City, on the Indonesian island of Sumatra. This event will adopt a hybrid working model, combining an in-person event with an online meeting via Zoom. Attendees and presenters are expected to interact in this way, using technology to connect to global networks. As has been widely stated in the literature, a number of reports and papers have examined the pandemic's negative effects, with the majority of work to date focusing on COVID-19's negative impact on psychological well-being. Thus, social adjustment is required for resilience in order to adapt to and change in the face of adversity. In other words, it is clear that social adjustment, which includes the specific behaviors and abilities that people use to deal with daily problems and adapt to changing circumstances, is critical for global resilience today. As such, this international conference, which will feature five invited keynote speakers from the Czech Republic, Hungary, Indonesia, and Japan is intended to serve as a forum for the dissemination of specific alternative and significant breakthroughs in rapid social adjustments for global resilience, with an emphasis on global society, social welfare and development, and innovative communication, among other topics. Therefore, we invite scholars, academics, researchers, experts, practitioners, and university students to participate and share perspectives, experiences, and research findings by submitting papers on a variety of topics relevant to the conference's theme and scope. All abstracts and papers submitted for consideration will undergo a double-blind peer review process to ensure their quality, relevance, and originality.

Mathematics in the Primary School Sandy Pepperell,Christine Hopkins,Sue Gifford,Peter Tallant.2014-03-18 Now in its third edition, *Mathematics in the Primary School* has been updated to reflect recent mathematics curriculum documentation and revised standards for QTS. Key areas include: The role of talk in learning maths Teacher questioning Development of children's reasoning Creative engagement with maths Assessment for learning and self assessment Suggested resources for teachers including ICT Providing a coherent set of principles for teaching primary mathematics across the main topics in the curriculum, the authors explore children's understanding of key areas of mathematics, at reception, infant and junior levels. Important principles and teaching approaches are identified, including the use of calculators and computers, and there is an emphasis on mental mathematics and problem solving supporting key issues raised by the Williams review (2008). Case studies are used throughout to illustrate how different teaching approaches are put into practice and how children respond to them, and there is advice on planning, organisation and assessment of mathematical learning in the classroom. Emphasising the importance of teachers' own mathematical knowledge and offering clear guidance and practical advice, this book is essential reading for students, NQTs and practising teachers with a focus on primary mathematics.

Enhancing NASA's Contributions to Polar Science National Research Council,National Research Council Staff,Division on Earth and Life Studies,Polar Research Board,Committee to Review NASA's Polar Geophysical Data Sets.2001-05-07 The high latitudes of the Arctic and Antarctic, together with some mountainous areas with glaciers and long-lasting snow, are sometimes called the cryosphere—defined as that portion of the planet where water is perennially or seasonally frozen as sea ice, snow cover, permafrost, ice sheets, and glaciers. Variations in the extent and characteristics of surface ice and snow in the high latitudes are of fundamental importance to global climate because of the amount of the sun's radiation that is reflected from these often white surfaces. Thus, the cryosphere is an important frontier for scientists seeking to understand past climate events, current weather, and climate variability. Obtaining the data necessary for such research requires the capability to observe and measure a variety of characteristics and processes exhibited by major ice sheets and large-scale patterns of snow and sea ice extent, and much of these data are gathered using satellites. As part of its efforts to better support the researchers studying the cryosphere and climate, the National Aeronautics and Space Administration (NASA)—using sophisticated satellite technology—measures a range of variables from atmospheric temperature, cloud properties, and aerosol concentration to ice sheet elevation, snow cover on land, and ocean salinity. These raw data are compiled and processed into products, or data sets, useful to scientists. These so-called polar geophysical data sets can then be studied and interpreted to answer questions related to atmosphere and climate, ice sheets, terrestrial systems, sea ice, ocean processes, and many other phenomena in the cryosphere. The goal of this report is to provide a brief review of the strategy, scope, and quality of existing polar geophysical data sets and help NASA find ways to make these products and future polar data sets more useful to researchers, especially those working on the global change questions that lie at the heart of NASA's Earth Science Enterprise.

Introduction to Atmospheric Chemistry Daniel J. Jacob. 1999 Atmospheric chemistry is one of the fastest growing fields in the earth sciences. Until now, however, there has been no book designed to help students capture the essence of the subject in a brief course of study. Daniel Jacob, a leading researcher and teacher in the field, addresses that problem by presenting the first textbook on atmospheric chemistry for a one-semester course. Based on the approach he developed in his class at Harvard, Jacob introduces students in clear and concise chapters to the fundamentals as well as the latest ideas and findings in the field. Jacob's aim is to show students how to use basic principles of physics and chemistry to describe a complex system such as the atmosphere. He also seeks to give students an overview of the current state of research and the work that led to this point. Jacob begins with atmospheric structure, design of simple models, atmospheric transport, and the continuity equation, and continues with geochemical cycles, the greenhouse effect, aerosols, stratospheric ozone, the oxidizing power of the atmosphere, smog, and acid rain. Each chapter concludes with a problem set based on recent scientific literature. This is a novel approach to problem-set writing, and one that successfully introduces students to the prevailing issues. This is a major contribution to a growing area of study and will be welcomed enthusiastically by students and teachers alike.

Review of the Draft Climate Science Special Report National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee to Review the Draft Climate Science Special Report.2017-05-30 The United States Global Change Research Program (USGCRP) is moving towards a sustained assessment process that allows for more fluid and consistent integration of scientific knowledge into the mandated quadrennial National Climate Assessment. As part of this process, the USGCRP is developing the Climate Science Special Report (CSSR), a technical report that details the current state-of-science relating to climate change and its physical impacts. The CSSR is intended to focus on climate change in the United States and to inform future USGCRP products. Review of the Draft Climate Science Special Report assesses whether the draft CSSR accurately presents the scientific literature in an understandable, transparent and traceable way; whether the CSSR authors handled the data, analyses, and statistical approaches in an appropriate manner; and the effectiveness of the report in conveying the information clearly for the intended audience. This report provides recommendations for how the draft CSSR could be strengthened.

Atmospheric Thermodynamics 2e Craig Bohren, Bruce Albrecht.2023-05 Atmospheric Thermodynamics provides a comprehensive treatment of a subject that can often be intimidating. The text analyses real-life problems and applications of the subject, alongside of guiding the reader through the fundamental basics and covering the first and second laws and the ideal gas law, followed by an emphasis on moist processes in Earth's atmosphere. Water in all its phases is a critical component of weather and the Earth's climate system. With user-friendly chapters that include energy conservation and water and its transformations, the authors write with a willingness to expose assumptions and approximations usually absent in other textbooks. History is woven into the text to provide a context for the time evolution of thermodynamics and its place in atmospheric science and demonstrating how physical reasoning leads to correct explanations of everyday phenomena. Many of the experiments described were done using inexpensive instruments to take advantage of the earth's atmosphere as a freely accessible thermodynamics library. This second edition provides updated treatments of atmospheric measurements and substantially expanded sections that include atmospheric applications of the first and second laws and energy exchange between humans and their atmospheric environment. With 400+ thought provoking problems and 350 references with annotated notes and further reading suggestions, this second edition provides a basic understanding of the fundamentals of this subject while still being a comprehensive reference guide for those working in the field of atmospheric and environmental sciences.
