Computational Thinking Education Siu-Cheung Kong, Harold Abelson. 2019-07-04 This book is open access under a CC BY 4.0 license. This book offers a comprehensive guide, covering every important aspect of computational thinking education. It provides an in-depth discussion of computational thinking, including the notion of perceiving computational thinking practices as ways of mapping models from the abstraction of data and process structures to natural phenomena. Further, it explores how computational thinking education is implemented in different regions, and how computational thinking is being integrated into subject learning in K-12 education. In closing, it discusses computational thinking from the perspective of STEM education, the use of video games to teach computational thinking, and how computational thinking is helping to transform the quality of the workforce in the textile and apparel industry.

Digital Contact Tracing for Pandemic Response Jeffrey P. Kahn, Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing Technologies. 2020-05-29 As nations race to hone contact-tracing efforts, the world's experts consider strategies for maximum transparency and impact. As public health professionals around the world work tirelessly to respond to the COVID-19 pandemic, it is clear that traditional methods of contact tracing need to be augmented in order to help address a public health crisis of unprecedented scope. Innovators worldwide are racing to develop and implement novel public-facing technology solutions, including digital contact tracing technology. These technological products may aid public health surveillance and containment strategies for this pandemic and become part of the larger toolbox for future infectious outbreak prevention and control. As technology evolves in an effort to meet our current moment, Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing Technologies—a rapid research and expert

consensus group effort led by Dr. Jeffrey P. Kahn of the Johns Hopkins Berman Institute of Bioethics in collaboration with the university's Center for Health Security—carried out an in-depth analysis of the technology and the issues it raises. Drawing on this analysis, they produced a report that includes detailed recommendations for technology companies, policymakers, institutions, employers, and the public. The project brings together perspectives from bioethics, health security, public health, technology development, engineering, public policy, and law to wrestle with the complex interactions of the many facets of the technology and its applications. This team of experts from Johns Hopkins University and other world-renowned institutions has crafted clear and detailed guidelines to help manage the creation, implementation, and application of digital contact tracing. Digital Contact Tracing for Pandemic Response is the essential resource for this fast-moving crisis. Introduction to Media Production Gorham Kindem, Robert B. Musburger, PhD.2012-08-21 Introduction to Media Production began years ago as an alternative text that would cover ALL aspects of media production, not just film or just tv or just radio. Kindem and Musburger needed a book that would show students how every form of media intersects with one another, and about how one needs to know the background history of how film affects video, and how video affects working in a studio, and ultimately, how one needs to know how to put it all together. Introduction to Media Production is the book that shows this intersection among the many forms of media, and how students can use this intersection to begin to develop their own high quality work. Introduction to Media Production is a primary source for students of media. Its readers learn about various forms of

media, how to make the best use of them, why one would choose one form of media over another, and finally, about all of the techniques used to create a media project. The digital revolution has exploded all the former techniques used in digital media production, and this book covers the now restructured and formalized digital workflows that make all production processes by necessity, digital. This text will concentrate on offering students and newcomers to the field the means to become aware of the critical importance of understanding the end destination of their production as a part of pre-production, not the last portion of post production. Covering film, tv, video, audio, and graphics, the fourth edition of Introduction to Digital Media promises to be yet another comprehensive guide for both students of media and newcomers to the media industry.

Kitty Genovese Catherine Pelonero.2016-03-15 A New York Times bestseller! Written in a flowing narrative style, Kitty Genovese: A True Account of a Public Murder and Its Private Consequences presents the story of the horrific and infamous murder of Kitty Genovese, a young woman stalked and stabbed on the street where she lived in Queens, New York, in 1964. The case sparked national outrage when the New York Times revealed that dozens of witnesses had seen or heard the attacks on Kitty Genovese and her struggle to reach safety but had failed to come to her aid—or even call police until after the killer had fled. This book, first published in 2014 and now with a new afterword, cuts through misinformation and conjecture to present a definitive portrait of the crime, the aftermath, and the people involved. Based on six years of research, Catherine Pelonero’s book presents the facts from police reports, archival material, court documents, and firsthand interviews. Pelonero offers a personal look at Kitty Genovese, an ambitious young woman viciously struck down in the prime of her life; Winston Moseley, the killer who led a double life as a responsible family-man by day and a deadly predator by night; the consequences for a community condemned; and others

touched by the tragedy. Beyond just a true-crime story, the book embodies much larger themes: the phenomenon of bystander inaction, the evolution of a serial killer, and the fears and injustices spawned by the stark prejudices of an era, many of which linger to this day.

The Central Intelligence Agency and Overhead Reconnaissance Gregory Pedlow, Donald

Welzenbach.2016-03-15 The CIA's 2013 release of its book *The Central Intelligence Agency and Overhead Reconnaissance 1954-1974* is a fascinating and important historical document. It contains a significant amount of newly declassified material with respect to the U-2 and Oxcart programs, including names of pilots; codenames and cryptonyms; locations, funding, and cover arrangements; electronic countermeasures equipment; cooperation with foreign governments; and overflights of the Soviet Union, Cuba, China, and other countries. Originally published with a Secret/No Foreign Dissemination classification, this detailed study describes not only the program's technological and bureaucratic aspects, but also its political and international context, including the difficult choices faced by President Eisenhower in authorizing overflights of the Soviet Union and the controversy surrounding the shoot down there of U-2 pilot Francis Gary Powers in 1960. The authors discuss the origins of the U-2, its top-secret testing, its specially designed high-altitude cameras and complex life-support systems, and even the possible use of poison capsules by its pilots, if captured. They call attention to the crucial importance of the U-2 in the gathering of strategic and tactical intelligence, as well as the controversies that the program unleashed. Finally, they discuss the CIA's development of a successor to the U-2, the Oxcart, which became the world's most technologically advanced aircraft. For the first time, the more complete 2013 release of this historical text is available in a professionally typeset format, supplemented with higher quality photographs that will bring alive these incredible aircraft and the story of their development and use by the CIA. This edition also includes a new preface by author Gregory W. Pedlow and a foreword by Chris Pocock. Skyhorse Publishing, as well as our Arcade imprint, are proud to publish a broad range of books for readers interested in history--books about World War II, the Third Reich, Hitler and his henchmen, the JFK assassination, conspiracies, the American Civil War, the American Revolution, gladiators, Vikings,

ancient Rome, medieval times, the old West, and much more. While not every title we publish becomes a New York Times bestseller or a national bestseller, we are committed to books on subjects that are sometimes overlooked and to authors whose work might not otherwise find a home. *Climate Control* Andrew Montford.2014

Curriculum Reform in the European Schools Sandra Leaton Gray, David Scott, Peeter Mehisto. 2018-05-29 This book is open access under a CC BY 4.0 license. This open access book examines the modern role of the European School system within the European Union, at a time when the global economy demands a new vision for contemporary education. The European schools are currently in a state of crisis: their 60-year-old tradition of bilingual and multilingual education is being strained by rapid EU expansion and the removal of English speaking teachers as a result of Brexit. Their tried and tested model of mathematics and science education has rapidly been overtaken by new developments in pedagogy and assessment research, while recruitment and

retention of students and teachers has become increasingly fraught as European member states review what they are, and what they are not, prepared to fund. The authors draw on original and empirical research to assess the European Schools' place in a new Europe where the entire post-war European Project is potentially at risk. This well-researched volume will be of interest to practitioners working in European schools as well as students and scholars of EU politics and international education.

The importance of teaching Great Britain: Department for Education.2010-11-24 England's school system performs below its potential and can improve significantly. This white paper outlines action designed to: tackle the weaknesses in the system; strengthen the status of teachers and teaching; reinforce the standards set by the curriculum and qualifications; give schools back the freedom to determine their own development; make schools more accountable to parents, and help them to learn more quickly and systematically from good practice elsewhere; narrow the gap in attainment between rich and poor. The quality of teachers and teaching is the most important factor in determining how well children do. The Government will continue to raise the quality of new entrants

to the profession, reform initial teacher training, develop a network of teaching schools to lead training and development, and reduce the bureaucratic burden on schools. Teachers will be given more powers to control bad behaviour. The National Curriculum will be reviewed, specifying a tighter model of knowledge of core subjects so that the Curriculum becomes a benchmark against which school can be judged. Schools will be given more freedom and autonomy, the Academies programme extended and parents will be able to set up Free Schools to meet parent demand. Accountability for pupil performance is critical, and much more information will be available to aid understanding of a school's performance. School improvement will be the responsibility of schools, not central government. Funding of schools needs to be fairer and more transparent, and there will be a Pupil Premium to target resources on the most deprived pupils.

Transforming Trajectories for Women of Color in Tech National Academies of Sciences, Engineering, and Medicine, National Academies Of Sciences Engineeri, Policy and Global

Affairs, Board on Higher Education and Workforce, Committee on Addressing the Underrepresentation of Women of Color in Tech. 2022-09-09 Demand for tech professionals is expected to increase substantially over the next decade, and increasing the number of women of color in tech will be critical to building and maintaining a competitive workforce. Despite years of efforts to increase the diversity of the tech workforce, women of color have remained underrepresented, and the numbers of some groups of women of color have even declined. Even in cases where some groups of women of color may have higher levels of representation, data show that they still face significant systemic challenges in advancing to positions of leadership. Research evidence suggests that structural and social barriers in tech education, the tech workforce, and in venture capital investment disproportionately and negatively affect women of color. Transforming Trajectories for Women of Color in Tech uses current research as well as information obtained through four public information-gathering workshops to provide recommendations to a broad set of stakeholders within the tech ecosystem for increasing recruitment, retention, and advancement of women of color. This report identifies gaps in existing research that obscure the nature of challenges faced by women of color in tech, addresses systemic issues that negatively affect outcomes for women of color in tech, and provides guidance for transforming existing systems and implementing evidence-based policies and practices to increase the success of women of color in tech.

Transforming the Workforce for Children Birth Through Age 8 National Research Council, Institute of Medicine, Board on Children, Youth, and Families, Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success. 2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical

foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. *Transforming the Workforce for Children Birth Through Age 8* explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. *Transforming the Workforce for Children Birth Through Age 8* offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and

ultimately improve outcomes for children.

Learning to Teach in the Secondary School Susan Capel, Marilyn Leask, Sarah Younie. 2016-03-17

Learning to teach involves hard work and careful preparation. To become an effective teacher requires pedagogical and subject knowledge, an understanding of your pupils and how they learn, and the confidence to respond to dynamic classroom situations. Learning to Teach in the Secondary School is the market leading text for all undergraduate, postgraduate and school-based routes to qualified teacher status. It offers an in-depth and practical introduction to the knowledge, skills and understanding needed to become a confident and effective teacher. With a focus on evidence-based practice, the book includes a wealth of examples to demonstrate how to successfully apply theory to practice, and how to critically analyse your practice to maximise pupil learning. This 7th edition is fully updated in light of the latest initiatives, evidence and research in the field, offering comprehensive coverage, unit by unit, of the key concepts and skills addressed on initial teacher education courses in preparation for work in schools. The wide range of pedagogical features support both university based work - including that up to Masters Level - and school-based initial teacher education, and are designed to help you develop those qualities that lead to good practice and a successful future in education. Written by expert practitioners, thirty-six essential units include:

- adopting a positive approach to managing behaviour to support learning
- ways pupils learn
- planning lessons, units of work and schemes of work
- motivating pupils
- assessment
- inclusion and special educational needs
- using ICT and digital technologies
- pupil grouping, progression and differentiation
- managing time, workload and stress
- getting your first teaching post.
