Infrared Spectroscopy of Symmetric and Spherical Spindles for Space Observation 1 Pierre-Richard Dahoo,Azzedine Lakhlifi.2021-05-25 This book is dedicated to the description and application of various different theoretical models to identify the near and mid-infrared spectra of symmetric and spherical top molecules in their gaseous form. Theoretical models based on the use

of group theory are applied to rigid and non-rigid molecules, characterized by the phenomenon of tunneling and large amplitude motions. The calculation of vibration-rotation energy levels and the analysis of infrared transitions are applied to molecules of ammonia (NH₃) and methane (CH₄). The applications show how interactions at the molecular scale modify the near and mid-infrared spectra of isolated molecules, under the influence of the pressure of a nano-cage (the substitution site of a rare gas matrix, clathrate, fullerene or zeolite) or a surface, and allow us to identify the characteristics of the perturbing environment. This book provides valuable support for teachers and researchers but is also intended for engineering students, working research engineers and Masters and doctorate students.

Abatement of Environmental Pollutants Pardeep Singh, Ajay Kumar, Anwasha

Borthakur. 2019-08-27 *Abatement of Environmental Pollutants: Trends and Strategies* addresses new technologies and provides strategies for environmental scientists, microbiologists and biotechnologists to help solve problems associated with the treatment of industrial wastewater. The book helps readers solve pollution challenges using microorganisms in bioremediation technologies, including discussions on global technologies that have been adopted for the treatment of industrial wastewater and sections on the lack of proper management. Moreover, limited space, more stringent waste disposal regulations and public consciousness have made the present techniques expensive and impractical. Therefore, there is an urgent need to develop sustainable management technologies for industries and municipalities. To remove the damaging effect of organic pollutants on the environment, various new technologies for their degradation have been recently discovered. Covers bioremediation of petrochemical pollutants, such as Benzene, Toluene, Xylene, Ethyl Benzene, and phenolic compound Includes discussions on genetic engineering microbes and their potential in pollution abatement Contains information on plant growth promoting bacteria and their role in environment management

Revolution from Above Dipankar Gupta. 2013 Is democracy driven by citizens or by the citizen elite? Acclaimed sociologist and author Dipankar Gupta argues that at every historical juncture when democracy made significant advances, it was the citizen elite, or the elite of calling, who led the charge, often going against the grain of popular demands and sentiments. At its best, democracy does not reflect reality as much as it shapes and changes it. This requires active intervention by the citizen elite, who are not concerned with short-term electoral calculations but have a vision for strengthening democracy. They are the ones who set the agenda that the masses follow, thereby taking the country forward on the path of true democracy. As India has not delivered meaningfully in

terms of universal health, education and livelihood, it too needs a band of citizen elite to initiate change. Dipankar Gupta argues that this change cannot be contemplated through the short-term rationality of elections, and needs visionaries to push it through-change can only be effected by 'revolution from above'. Incisive and relevant, this book provides empirical evidence to show how urgent it is to take democracy forward, and explains how best to accomplish it in the light of international historical evidence.

The Irrigation Sector .1999 India's irrigated agriculture sector has been basic to India's economic development and poverty alleviation. One of India's major achievements is its rapid expansion of irrigation and drainage infrastructure. However, the major emphasis on development has been achieved at a cost. The importance put on new construction has diverted attention away from the need to ensure the quality, productivity, and sustainability of the services. Further, a governmental subsidy based approach has been used and this has resulted in irrigation and drainage services which, while enabling significantly higher productivity than from non-irrigated lands, are well below their potential. 'The Irrigation Sector' discusses directions for future growth, the framework for reform, and the reform agenda.
