**Ispitivanje geometrijskih karakteristika proizvoda** Nermina Zaimović-Uzunović,Amra Talić-Čikmiš,Samir Lemeš,Abaz Manduka.2019-03-20 Danas se u industriji susreću različiti koncepti koji pomažu osiguranje kvaliteta, kao što je totalno upravljanje kvalitetom (TQM), kompjuterski integrisana proizvodnja (CIM), statistički proces kontrole (SPC) i drugi, bez kojih nema moderne proizvodnje. Upravljanje proizvodnjom ne zasniva se više na vlastitim iskustvima i greškama, nego na organiziranom i planiranom sistemu kvaliteta. Prvi korak u tom cilju je postizanje tehničkog kvaliteta proizvoda, smanjenje grešaka i odstupanja od zadanih tolerancija. Mjerenje i kontrola dimenzionalnih karakteristika proizvoda predstavlja tehnički dio kvaliteta bez kojeg nema zadovoljstva kupca niti uspješne prodaje. Principi toleriranja mjera, oblika i položaja predstavljaju uslov koji se mora ostvariti da bi se proizvod napravio sa najmanjom mogućom greškom. Proces proizvodnje i mjerna oprema moraju biti sposobni odgovoriti tom zadatku. Proces proizvodnje i kontrola geometrijskih karakteristika proizvoda međusobno su povezani, a kontrole i mjerenja provode se u svim fazama proizvodnog procesa. Razvoj mjernih i kontrolnih sredstava treba vezati s tehnološkim napretkom i razvojem novih metoda mjerenja karakteristika proizvoda. Nove tehnologije mjerenja geometrijskih karakteristika proizvoda, kao što su koordinatna i laserska mjerna sredstva, koriste se za postizanje tačnosti mjerenja koju nije moguće postići klasičnim mjernim sredstvima, koja se još uvijek najčešće koriste. Strategije i principi mjerenja, te standardi koji to propisuju, neophodni su uslovi za ostvarenje kvaliteta proizvoda. Korištenje nove proizvodne i mjerne opreme za izradu kvalitetnijeg proizvoda zahtijeva nova znanja, ali i poznavanje temeljnih principa specifikacije, mjerenja i kontrole karakteristika proizvoda. Knjiga u kojoj su opisani principi i postupci ispitivanja geometrijskih karakteristika proizvoda namijenjena je inženjerima koji se u svakodnevnoj praksi bave kontrolom dimenzionalnih karakteristika proizvoda, a posebno studentima koji studiraju na mašinskim i sličnim fakultetima koji u programu imaju predmete sličnog sadržaja kao ova knjiga. Autori, svaki u svom dijelu, učestvuju u nastavnom procesu na predmetima koji obuhvataju materiju opisanu u ovoj knjizi ili dugi niz godina rade u proizvodnji i primjenjuju metode i principe kontrole i mjerenja opisane u ovoj knjizi.

**Measuring Strategies in Tactile Coordinate Metrology** Robert Roithmeier.2014-10-24 Today, there is hardly any workpiece whose form parameters cannot be measured by means of coordinate measuring machines. The universal use of these machines allows a wide range of application of this technology which, however, increases inevitably the complexity of its handling. The numerous options of the machine-specific operating software on the one hand and the various theoretical considerations regarding a target-oriented treatment of measuring jobs on the other hand result in the fact that the measuring results obtained from the same coordinate measuring machine on the same workpiece under similar conditions may differ. In Order to increase the comparability of measuring results, it is necessary to provide the operators of coordinate measuring machines -in addition to a well-founded AUKOM training - with procedure options for planning, performing, evaluating and documenting measurements. This book by the ZEISS Metrology Academy makes a contribution towards achieving these targets.

**Human Thermal Environments** Ken Parsons.2007-03-22 Our responses to our thermal environment have a considerable effect on our performance and behavior, not least in the realm of work. There has been considerable scientific investigation of these responses and formal methods have been developed for environmental evaluation and design. In recent years these have been developed to the extent that detailed national and international standards of practice have now become feasible. This new edition of Ken Parson's definitive text brings us back up to date. He covers hot, moderate and cold environments, and defines these in terms of six basic parameters: air temperature, radiate temperature, humidity, air velocity, clothing worn, and the person's activity. There is a focus on the principles and practice of human response, which incorporates psychology, physiology and environmental physics with applied ergonomics. Water requirements, computer modeling and computer-aided design are brought in, as are current standards. Special populations, such as the aged or disabled and specialist environments such as those found in vehicles are also considered. This book continues to be the standard text for the design of environments for humans to live and work safely, comfortably and effectively, and for the design of materials which help the same people cope with their environments.

**Environmental Remediation Technologies for Metal-Contaminated Soils** Hiroshi Hasegawa, Ismail Md. Mofizur Rahman, Mohammad Azizur Rahman.2015-09-28 This book presents a comprehensive and detailed description of remediation techniques for metal-contaminated soils derived from both natural processes and anthropogenic activities. Using a methodical, step-by-step presentation, the book starts by overviewing the origin of toxicants and the correlated comparative extent of contamination to the environment. The legal provisions as proposed or applied in different countries are then discussed to explain the global regulatory situation regarding soil contamination and the extent of consequent concern. The core part of this publication describes the major techniques for in situ or ex situ treatment of the contaminated soil to meet the regulatory limits. Finally, risk evaluation is incorporated, giving special attention to possible impacts during or after implementation of the remediation strategies. The intrusion of metals in soils mostly occurs from various anthropogenic activities, e.g., agricultural practices, industrial activities, and municipal waste disposal. The volumes of metal-contaminated soil are becoming greater than before and are ever-increasing due to rapid urbanization, intensified industrialization, and/or population booms in certain parts of the world. Hence, the options previously proposed, such as isolation of the contaminated site or movement of the contaminated mass to a secure disposal site after excavation, are becoming unsuitable from the economic point of view, and instead, decontamination alternatives are preferred. This book will help readers such as scientists and regulators to understand the details of the remediation techniques available to deal with the soils contaminated by toxic metals.

*Toleranzdesign* Bernd Klein.2021-05-10 Die moderne globalisierte Fertigung erfordert den Austausch eindeutiger und widerspruchsfreier Fertigungsunterlagen. Diese müssen überall gelesen und verstanden werden, um einen hohen Qualitätsanspruch gewährleisten zu können. Das ISO-Normenwerk hat hierzu das Konzept der Geometrischen Produktspezifizierung (GPS) geschaffen, welches auf CAD und die digitale Koordinatenmesstechnik ausgerichtet ist. Die GPS-Regeln geben vor, wie Bauteile in technischen Zeichnungen dimensionell, geometrisch und oberflächentechnisch zu beschreiben sind. Dafür wurden eine Vielzahl neuer Normen mit speziellen Kurzzeichen, Symbolen und Regeln erlassen, die ein Konstrukteur anwenden muss, um bestimmte Produkteigenschaften zu erhalten. Die darauf beruhende Beschreibungssprache hat international eine große Bedeutung erlangt, da sie die Funktionalität, Kosten und Qualitätsfähigkeit von Produkten zu sichern hilft. Das Buch legt den aktuellen Normenstand im Zusammenhang mit der Erstellung richtiger Fertigungsunterlagen da. Es zeigt die zweckgerechte Anwendung der Symbolik, 2D- und 3D-CAD-Bemaßungs- und Tolerierungsregeln, Messgrundsätze und Oberflächenspezifizierung. An einer Vielzahl von Beispielen wird die richtige Übertragung und Anwendung gezeigt. Vor dem Hintergrund der Fertigung 4.0 ist das Buch hoch aktuell. Die Zielgruppen sind technische Produktdesigner/innen, Studierende an Fachhochschulen und Universitäten, Berufspraktiker im Maschinen- und Automobilbau.

Information Modeling for Interoperable Dimensional Metrology Y Zhao,T Kramer,Robert Brown,Xun Xu.2011-08-28 Dimensional metrology is an essential part of modern manufacturing technologies, but the basic theories and measurement methods are no longer sufficient for today's digitized systems. The information exchange between the software components of a dimensional metrology system not only costs a great deal of money, but also causes the entire system to lose data integrity. Information Modeling for Interoperable Dimensional Metrology analyzes interoperability issues in dimensional metrology systems and describes information modeling techniques. It discusses new approaches and data models for solving interoperability problems, as well as introducing process activities, existing and emerging data models, and the key

technologies of dimensional metrology systems. Written for researchers in industry and academia, as well as advanced undergraduate and postgraduate students, this book gives both an overview and an in-depth understanding of complete dimensional metrology systems. By covering in detail the theory and main content, techniques, and methods used in dimensional metrology systems, Information Modeling for Interoperable Dimensional Metrology enables readers to solve real-world dimensional measurement problems in modern dimensional metrology practices.

**Arsenic Research and Global Sustainability** Prosun Bhattacharya, Marie Vahter, Jerker Jarsjö, Jurate Kumpiene, Arslan Ahmad, Charlotte Sparrenbom, Gunnar Jacks, Marinus Eric Donselaar, Jochen Bundschuh, Ravi Naidu. 2016-06-08 The Congress Arsenic in the Environment offers an international, multi- and interdisciplinary discussion platform for research and innovation aimed towards a holistic solution to the problem posed by the environmental toxin arsenic, with considerable societal impact. The congress has focused on cutting edge and breakthrough research in physical, chemical, toxicological, medical, agricultural and other specific issues on arsenic across a broader environmental realm. The Congress Arsenic in the Environment was first organized in Mexico City (As2006) followed by As2008 in Valencia, Spain, As2010 in Tainan, Taiwan, As2012 in Cairns, Australia and As2014 in Buenos Aires, Argentina. The 6th International Congress As2016 was held June 19-23, 2016 in Stockholm, Sweden and was entitled Arsenic Research and Global Sustainability. The Congress addressed the broader context of arsenic research along the following themes: Theme 1: Arsenic in Environmental Matrices and Interactions (Air, Water, Soil and Biological Matrices) Theme 2: Arsenic in Food Chain Theme 3: Arsenic and Health Theme 4: Clean Water Technology for Control of Arsenic Theme 5: Societal issues, Policy Studies, Mitigation and Management Long term exposure to low-to-medium levels of arsenic via contaminated food and drinking water can have a serious impact on human health and globally, more than 100 million people are at risk. Since the end of the 20th century, arsenic in drinking water (mainly groundwater) has emerged as a global health concern. In the past decade, the presence of arsenic in plant foods - especially rice - has gained increasing attention. In the Nordic countries in particular, the use of water-soluble inorganic arsenic chemicals (e.g. chromated copper arsenate, CCA) as wood preservatives and the mining of sulfidic ores have been flagged as health concern. The issue has been accentuated by discoveries of naturally occurring arsenic in groundwater, primarily in the private wells, in parts of the Fennoscandian Shield and in sedimentary formations, with potentially detrimental effects on public health. Sweden has been at the forefront of research on the health effects of arsenic, technological solutions for arsenic removal, and sustainable mitigation measures for developing countries. Hosting this Congress in Sweden was also relevant because historically Sweden has been one of the leading producer of As<sub>2</sub>O<sub>3</sub> and its emission from the smelting industries in northern Sweden and has successfully implemented actions to reduce the industrial emissions of arsenic as well as minimizing the use of materials and products containing arsenic in since 1977. The Congress has gathered professionals involved in different segments of interdisciplinary research in an open forum, and strengthened relations between academia, industry, research laboratories, government agencies and the private sector to share an optimal atmosphere for exchange of knowledge, discoveries and discussions about the problem of arsenic in the environment and catalyze the knowledge generation and innovations at a policy context to achieve the goals for post 2015 Sustainable Development.
