**Third-Party Certifiers** Jan De Bruyne.2019-07-12 Third-Party Certifiers Jan De Bruyne Third-party certifiers are organisations that are independent a requesting entity. They attest that a product, service, information or person possesses certain qualifications or meets safety, quality or technical standards. This important book presents an in-depth analysis of the liability and obligations of certifiers, evaluates existing certification processes in selected fields and proposes new mechanisms which could increase the accuracy and reliability of certifiers' ratings, marks or reports. Highlighting the risks of errors in this activity - inaccurate certification was a major factor in the global financial crisis of 2008 - the author takes a comparative approach, looking at the certification process in several European countries, Australia and the United States. Such aspects of the process as the following are thoroughly described: obligations and liability of certifiers during the certification process; risk of 'information asymmetry' between the requesting entity and the end user; and relationship between the civil liability of certifiers and public law aspects. The analysis includes detailed research on key industries and jurisdictions and a specific proposed framework for more accurate and reliable certification. Because the efficient and effective functioning of third-party certifiers is extremely important in today's world - especially in such areas as health, the environment, safety or economic values - this deeply researched contribution to an important area of commercial law, combining analysis of current issues with proposed reforms, will be welcomed by practitioners when confronted with legal issues with regard to the certification process. The book's conceptual framework will also prove highly useful for policymakers charged with developing reliable certification mechanisms.

**Open Access and the Humanities** Martin Paul Eve. 2014-11-27 If you work in a university, you are almost certain to have heard the term 'open access' in the past couple of years. You may also have heard either that it is the utopian answer to all the problems of research dissemination or perhaps that it marks the beginning of an apocalyptic new era of 'pay-to-say' publishing. In this book, Martin Paul Eve sets out the histories, contexts and controversies for open access, specifically in the humanities. Broaching practical elements alongside economic histories, open licensing, monographs and funder policies, this book is a must-read for both those new to ideas about open-access scholarly communications and those with an already keen interest in the latest developments for the humanities. This title is also available as Open Access via Cambridge Books Online.

**Networks of Outrage and Hope** Manuel Castells. 2015-06-04 Networks of Outrage and Hope is an exploration of the new forms of social movements and protests that are erupting in the world today, from the Arab uprisings to the indignadas movement in Spain, from the Occupy Wall Street movement to the social protests in Turkey, Brazil and elsewhere. While these and similar social movements differ in many important ways, there is one thing they share in common: they are all interwoven inextricably with the creation of autonomous communication networks supported by the Internet and wireless communication. In this new edition of his timely and important book, Manuel Castells examines the social, cultural and political roots of these new social movements, studies their innovative forms of self-organization, assesses the precise role of technology in the dynamics of the movements, suggests the reasons for the support they have found in large segments of society, and probes their capacity to induce political change by influencing people's minds. Two new chapters bring the analysis up-to-date and draw out the implications of these social movements and protests for understanding the new forms of social change and political democracy in the global network society.

**Fostering freedom online: the role of Internet intermediaries** MacKinnon, Rebecca, Hickok, Elonnai, Bar, Allon, Lim, Hae-in. 2015-01-29 Internet intermediaries play a unique role in linking authors of content and audiences. They may either protect or jeopardize end user rights to free

expression, given their role in capturing, storing, searching, sharing, transferring and processing large amount of information, data and user-generated content. This research aims to identify principles for good practices and processes that are consistent with international standards for free expression that Internet intermediaries may follow in order to protect the human rights of end users online.

**Real-time Digital Signal Processing for Software-defined Optical Transmitters and Receivers** Schmogrow, Rene Marcel.2014-11-21 A software-defined optical Tx is designed and demonstrated generating signals with various formats and pulse-shapes in real-time. Special pulse-shapes such as OFDM or Nyquist signaling were utilized resulting in a highly efficient usage of the available fiber channel bandwidth. This was achieved by parallel data processing with high-end FPGAs. Furthermore, highly efficient Rx algorithms for carrier and timing recovery as well as for polarization demultiplexing were developed and investigated.

**High-Dimensional Probability** Roman Vershynin.2018-09-30 High-dimensional probability offers insight into the behavior of random vectors, random matrices, random subspaces, and objects used to quantify uncertainty in high dimensions. Drawing on ideas from probability, analysis, and geometry, it lends itself to applications in mathematics, statistics, theoretical computer science, signal processing, optimization, and more. It is the first to integrate theory, key tools, and modern applications of high-dimensional probability. Concentration inequalities form the core, and it covers both classical results such as Hoeffding's and Chernoff's inequalities and modern developments such as the matrix Bernstein's inequality. It then introduces the powerful methods based on stochastic processes, including such tools as Slepian's, Sudakov's, and Dudley's inequalities, as well as generic chaining and bounds based on VC dimension. A broad range of illustrations is embedded throughout, including classical and modern results for covariance estimation, clustering, networks, semidefinite programming, coding, dimension reduction, matrix completion, machine learning, compressed sensing, and sparse regression.

**The Secret of Our Success** Joseph Henrich.2017-10-17 How our collective intelligence has helped us to evolve and prosper Humans are a puzzling species. On the one hand, we struggle to survive on our own in the wild, often failing to overcome even basic challenges, like obtaining food, building shelters, or avoiding predators. On the other hand, human groups have produced ingenious technologies, sophisticated languages, and complex institutions that have permitted us to successfully expand into a vast range of diverse environments. What has enabled us to dominate the globe, more than any other species, while remaining virtually helpless as lone individuals? This book shows that the secret of our success lies not in our innate intelligence, but in our collective brains—on the ability of human groups to socially interconnect and learn from one another over generations. Drawing insights from lost European explorers, clever chimpanzees, mobile hunter-gatherers, neuroscientific findings, ancient bones, and the human genome, Joseph Henrich demonstrates how our collective brains have propelled our species' genetic evolution and shaped our biology. Our early capacities for learning from others produced many cultural innovations, such as fire, cooking, water containers, plant knowledge, and projectile weapons, which in turn drove the expansion of our brains and altered our physiology, anatomy, and psychology in crucial ways. Later on, some collective brains generated and recombined powerful concepts, such as the lever, wheel, screw, and writing, while also creating the institutions that continue to alter our motivations and perceptions. Henrich shows how our genetics and biology are inextricably interwoven with cultural evolution, and how culture-gene interactions launched our species on an extraordinary evolutionary trajectory. Tracking clues from our ancient past to the present, *The Secret of Our Success* explores how the evolution of both our cultural and social natures produce a collective intelligence that explains both our species' immense success and the origins of human uniqueness.

*The Origin of Consciousness in the Breakdown of the Bicameral Mind* Julian Jaynes.2000-08-15 National Book Award Finalist: "This man's ideas may be the most influential, not to say controversial, of the second half of the twentieth century."—Columbus Dispatch At the heart of this classic, seminal

book is Julian Jaynes's still-controversial thesis that human consciousness did not begin far back in animal evolution but instead is a learned process that came about only three thousand years ago and is still developing. The implications of this revolutionary scientific paradigm extend into virtually every aspect of our psychology, our history and culture, our religion—and indeed our future. “Don’t be put off by the academic title of Julian Jaynes’s *The Origin of Consciousness in the Breakdown of the Bicameral Mind*. Its prose is always lucid and often lyrical...he unfolds his case with the utmost intellectual rigor.”—*The New York Times* “When Julian Jaynes . . . speculates that until late in the twentieth millennium BC men had no consciousness but were automatically obeying the voices of the gods, we are astounded but compelled to follow this remarkable thesis.”—John Updike, *The New Yorker* “He is as startling as Freud was in *The Interpretation of Dreams*, and Jaynes is equally as adept at forcing a new view of known human behavior.”—*American Journal of Psychiatry*

**Health Claims and Food Labelling** Sian Astley.2019-12-03 Providing an introduction to the use of nutrition and health claims, this book explores these claims around the world and the impact of the different legislations on consumers as well as likely developments in the future. As nations tackle the food and health issues of the 21st century, this book will provide a single source drawing together all of these topics. In recent years, nutrition and health claims displayed on food packaging have become more regulated with the dual aims of protecting consumers from false claims and promoting consumption of foods with proven health benefits. Edited by Siân Astley, with contributions from renowned experts, chapters describe the legislation underpinning nutrition and health claims globally, explain the permitted use of claims globally in theory and practice and explore differences between the various legislative frameworks. This book will be of interest to those involved in food health and dietary impact research, as well as food manufacturers, legal and healthcare students with an interest in food, nutrition, bioactive compounds and human health.

**Discrimination, Vulnerable Consumers and Financial Inclusion** Cătălin-Gabriel Stănescu,Asress Adimi Gikay.2020-12-28 This book addresses the questions of discrimination, vulnerable consumers, and financial inclusion in the light of the emerging legal, socioeconomic, and technological challenges. New technologies - such as artificial intelligence-driven consumer credit risk assessment and Fintech platforms, the changing nature of vulnerability due to the ongoing COVID-19 pandemic, as well as the sophistication of digital technologies, which help circumvent legal barriers and protections - necessitate the continuous study of the existing legal frameworks and measures that are capable of tackling these challenges. Organized in two major parts, the first addresses, from multiple national angles, the idea of a human rights approach to consumer law, in order to replace the mantra of economic efficiency that characterizes financial services with those of human dignity and freedom from discrimination and from debt-induced servitude. The second tackles the challenges posed by increased usage of technology in connection with financial services, which tends to solve, but also creates, additional issues for consumers in general, and for vulnerable groups in particular.

Big Business and Hitler Jacques R. Pauwels.2017-11-15 For big business in Germany and around the world, Hitler and his National Socialist party were good news. Business was bad in the 1930s, and for multinational corporations Germany was a bright spot in a world suffering from the Great Depression. As Jacques R. Pauwels explains in this book, corporations were delighted with the profits that came from re-arming Germany, and then supplying both sides of the Second World War. Recent historical research in Germany has laid bare the links between Hitler's regime and big German firms. Scholars have now also documented the role of American firms — General Motors, IBM, Standard Oil, Ford, and many others — whose German subsidiaries eagerly sold equipment, weapons, and fuel needed for the German war machine. A key roadblock to America's late entry into the Second World War was behind-the-scenes pressure from US corporations seeking to protect their profitable business selling to both sides. Basing his work on the recent findings of scholars in many European countries and the US, Pauwels explains how Hitler gained and held the support of powerful business interests who found the well-liked oneparty fascist government, ready and willing to protect the property and profits of big business. He documents the role of the many multinationals in business today who supported Hitler and gained from the Nazi government's horrendous measures.

A Quiet Revolution Ari Rosmarin,Niamh Eastwood.2012 'A Quiet Revolution: Drug Decriminalisation Policies in Practice Across the Globe' is the first report to support Release's campaign 'Drugs - It's Time for Better Laws'. This report looks at over 20 countries that have adopted some form of decriminalisation of drug possession, including some States that have only decriminalised cannabis possession. The main aim of the report was to look at the existing research to establish whether the adoption of a decriminalised policy led to significant increases in drug use - the simple answer is that it did not. This then begs the question that if the model of enforcement adopted has little impact on levels of use what is the point in pursuing

a criminal justice approach which carries significant harms for individuals? [from Website]

Rapid Visual Screening of Buildings for Potential Seismic Hazards: Supporting Documentation .2015 The Rapid Visual Screening (RVS) handbook can be used by trained personnel to identify, inventory, and screen buildings that are potentially seismically vulnerable. The RVS procedure comprises a method and several forms that help users to quickly identify, inventory, and score buildings according to their risk of collapse if hit by major earthquakes. The RVS handbook describes how to identify the structural type and key weakness characteristics, how to complete the screening forms, and how to manage a successful RVS program.

**The ARML Power Contest** Thomas Kilkelly.2015-01-02 The ARML (American Regions Math League) Power Contest is truly a unique competition in which a team of students is judged on its ability to discover a pattern, express the pattern in precise mathematical language, and provide a logical proof of its conjectures. Just as a team of students can be self-directed to solve each problem set, a teacher, math team coach, or math circle leader could take these ideas and questions and lead students into problem solving and mathematical discovery. This book contains thirty-seven interesting and engaging problem sets from the ARML Power Contests from 1994 to 2013. They are generally extensions of the high school mathematics classroom and often connect two remote areas of mathematics. Additionally, they provide meaningful problem situations for both the novice and the veteran mathlete. Thomas Kilkelly has been a mathematics teacher for forty-three years. During that time he has been awarded several teaching honors and has coached many math teams to state and national championships. He has always been an advocate for more discovery, integration, and problem solving in the mathematics classroom. In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life, MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people, their parents and teachers, and the mathematics profession. Titles in this series are co-published with the Mathematical Sciences Research Institute (MSRI).
