*Problems and Solutions in Mathematical Finance, Volume 1* Eric Chin,Sverrir Ólafsson,Dian Nel.2014-11-10 Mathematical finance requires the use of advanced mathematical techniques drawn from the theory of probability, stochastic processes and stochastic differential equations. These areas are generally introduced and developed at an abstract level, making it problematic when applying these techniques to practical issues in finance. Problems and Solutions in Mathematical Finance Volume I: Stochastic Calculus is the first of a four-volume set of books focusing on problems and solutions in mathematical finance. This volume introduces the reader to the basic stochastic calculus concepts required for the study of this important subject, providing a large number of worked examples which enable the reader to build the necessary foundation for more practical orientated problems in the later volumes. Through this application and by working through the numerous examples, the reader will properly understand and appreciate the fundamentals that underpin mathematical finance. Written mainly for students, industry practitioners and those involved in teaching in this field of study, Stochastic Calculus provides a valuable reference book to complement one's further understanding of mathematical finance.

**Operator Theory and Ill-Posed Problems** Mikhail M. Lavrent'ev, Lev Ja. Savel'ev.2011-12-22 This book consists of three major parts. The first two parts deal with general mathematical concepts and certain areas of operator theory. The third part is devoted to ill-posed problems. It can be read independently of the first two parts and presents a good example of applying the methods of calculus and functional analysis. The first part Basic Concepts briefly introduces the language of set theory and concepts of abstract, linear and multilinear algebra. Also introduced are the language of topology and fundamental concepts of calculus: the limit, the differential, and the integral. A special section is devoted to analysis on manifolds. The second part Operators describes the most important function spaces and operator classes for both linear and nonlinear operators. Different kinds of generalized functions and their transformations are considered. Elements of the theory of linear operators are presented. Spectral theory is given a special focus. The third part Ill-Posed Problems is devoted to problems of mathematical physics, integral and operator equations, evolution equations and problems of integral geometry. It also deals with problems of analytic continuation. Detailed coverage of the subjects and numerous examples and exercises make it possible to use the book as a textbook on some areas of calculus and functional analysis. It can also be used as a reference textbook because of the extensive scope and detailed references with comments.

Slavic Gender Linguistics Margaret H. Mills.1999-01-01 This edited volume offers the first comprehensive collection devoted to the study of Slavic gender linguistics by a team of international Slavic linguists. It features eleven highly-original, data-driven contributions representing a variety of approaches to this understudied and underrepresented area of contemporary Slavic linguistics. For those working specifically in the field of gender linguistics, the collection presents the first English-language introduction to this vital area of sociolinguistic research based upon findings from contemporary Russian, Polish, Czech and other Slavic languages. For Slavic linguists, it presents a ground-breaking collection of sociolinguistic studies which advance Russian linguistic theory and further enhance it with new theoretical frameworks and analyses by which to view the Slavic data. Each of the contributions is sufficiently rich and varied in its conceptual design, theoretical approach, and potential for practical application in graduate seminars or courses in gender linguistics. The linguistic fields addressed by this collection include: pragmatics, discourse analysis, grammar, syntax, literary linguistics, cross-cultural linguistics, diachronic linguistics, and quantitative linguistics.
