The Power of Urban Water Nicola Chiarenza,Annette Haug,Ulrich Müller.2020-05-05 Water is a global resource for modern societies - and water was a global resource for pre-modern societies. The many different water systems serving processes of urbanisation and urban life in ancient times and the Middle Ages have hardly been researched until now. The numerous contributions to this volume pose questions such as what the basic cultural significance of water was, the power of water, in the town and for the town, from different points of view. Symbolic, aesthetic, and cult aspects are taken up, as is the role of water in politics, society, and economy, in daily life, but also in processes of urban planning or in urban neighbourhoods. Not least, the dangers of polluted water or of flooding presented a challenge to urban society. The contributions in this volume draw attention to the complex, manifold relations between water and human beings. This collection presents the results of an international conference in Kiel in 2018. It is directed towards both scholars in ancient and mediaeval studies and all those interested in the diversity of water systems in urban space in ancient and mediaeval times.

The State of Food Security and Nutrition in the World 2018 Food and Agriculture Organization of the United Nations.2018-09-14 New evidence this year corroborates the rise in world hunger observed in this report last year, sending a warning that more action is needed if we aspire to end world hunger and malnutrition in all its forms by 2030. Updated estimates show the number of people who suffer from hunger has been growing over the past three years, returning to prevailing levels from almost a decade ago. Although progress continues to be made in reducing child stunting, over 22 percent of children under five years of age are still affected. Other forms of malnutrition are also growing: adult obesity continues to increase in countries irrespective of their income levels, and many countries are coping with multiple forms of malnutrition at the same time - overweight and obesity, as well as anaemia in women, and child stunting and wasting.

Agriculture and Climate Change Gerald C. Nelson.2009-01-01 Agriculture and climate change are inextricably linked. Agriculture is part of the climate change problem, contributing about 13.5 percent of annual greenhouse gas (GHG) emissions (with forestry contributing an additional 19 percent), compared with 13.1 percent from transportation. Agriculture is, however, also part of the solution, offering promising opportunities for mitigating GHG emissions through carbon sequestration, soil and land use management, and biomass production. Climate change threatens agricultural production through higher and more variable temperatures, changes in precipitation patterns, and increased occurrences of extreme events such as droughts and floods. And if agriculture is not included, or not well included, in the international climate change negotiations leading up to the 15th Conference of Parties (COP15) of the UN Framework Convention on Climate Change in Copenhagen in December 2009, resulting climate change policies could threaten poor farming communities and smallholders in many developing countries. The policies could also impede the ability of smallholders to partake in new economic opportunities that might arise from the negotiations.

Molecular Beam Epitaxy John Wilfred Orton,Tom Foxon.2015 The book is a history of Molecular Beam Epitaxy (MBE) as applied to the growth of semiconductor thin films (note that it does not cover the subject of metal thin films). It begins by examining the origins of MBE, first of all looking at the nature of molecular beams and considering their application to fundamental physics, to the development of nuclear magnetic resonance and to the invention of the microwave MASER. It shows how molecular beams of silane (SiH₄) were used to study the nucleation of silicon films on a silicon substrate and how such studies were extended to compound semiconductors such as GaAs. From such surface studies in ultra-high vacuum the technique developed into a method of growing high quality single crystal films of a wide range of semiconductors. Comparing this with earlier evaporation methods of deposition and with other epitaxial deposition methods such as liquid phase and vapour phase epitaxy (LPE and VPE). The text describes the development of MBE machines from the early 'home-made' variety to that of commercial equipment and show how MBE was gradually refined to produce high quality films with atomic dimensions. This was much aided by the use of various in-situ surface analysis techniques, such as reflection high energy electron diffraction (RHEED) and mass spectrometry, a feature unique to MBE. It looks at various modified versions of the basic MBE process, then proceed to describe their application to the growth of so-called 'low-dimensional structures' (LDS) based on ultra-thin heterostructure films with thickness of order a few molecular monolayers. Further chapters cover the growth of a wide range of different compounds and describe their application to fundamental physics and to the fabrication of electronic and opto-electronic devices. The authors study the historical development of all these aspects and emphasise both the (often unexpected) manner of their discovery and development and the unique features which MBE brings to the growth of extremely complex structures with monolayer accuracy.

Achtung-Panzer! Heinz Guderian.1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The Benthic Boundary Layer I. McCave.2012-12-06 The Conference on the Benthic Boundary Layer was held under the auspices of the NATO Science Committee as part of its continuing effort to promote the useful progress of science through international cooperation. Science Committee Conferences are deliberately designed to focus attention on unsolved problems, with carefully selected participants invited to provide complementary expertise from a variety of relevant disciplines. Through intense discussion in small groups they seek to reach a consensus on assessments and recommendations for future research emphasis, which it is hoped will be of value to the larger scientific community. The subjects treated over the past few years have been as varied as science itself-e.g., computer software engineering, chemical catalysis, and materials and energy research. The present effort evolved from informal discussions between marine geologists, chemists, and biologists which underlined the desirability of improved communication among those concerned with the benthic layer. In both scientific and technological terms this is an exciting frontier, rich in promise but poorly understood at present. It is particularly striking to realize that there are at least as many definitions of the

benthic layer as there are disciplines involved, and it seemed clear that there was much to be gained by a detailed exchange of views on research capabilities, trends, and priorities. The results of the meeting appear to have confirmed the hopes of the sponsors.

Physiological Ecology of North American Plant Communities Brain F. Chabot.2012-12-06 Although, as W.D. Billings notes in his chapter in this book. the development of physiological ecology can be traced back to the very beginnings of the study of ecology it is clear that the modern development of this field in North America is due in the large part to the efforts of Billings alone. The foundation that Billings laid in the late 1950s came from his own studies on deserts and subsequently arctic and alpine plants, and also from his enormous success in instilling enthusiasm for the field in the numerous students attracted to the plant ecology program at Duke University. Billings' own studies provided the model for subsequent work in this field. Physiological techniques, normally confined to the laboratory, were brought into the field to examine processes under natural environmental conditions. These field studies were accompanied by experiments under controlled conditions where the relative impact of various factors could be assessed and further where genetic as opposed to environmental influences could be separated. This blending of field and laboratory approaches promoted the design of experiments which were of direct relevance to understanding the distribution and abundance of plants in nature. Physiological mechanisms were studied and assessed in the context of the functioning of plants under natural conditions rather than as an end in itself.

Preventing Intimate Partner and Sexual Violence Against Women .2010 Intimate partner violence and sexual violence are significant global health problems and human rights issues. Under the rubric of violence against women the two overlapping issues have received increasing attention. Much of the response to these forms of violence has focussed either on advocacy, providing adequate health and legal services and ensuring safety of victims once violence is disclosed, or on screening for violence in the context of health services. When the word prevention is used, it is usually in reference to secondary and tertiary prevention - helping women get out of violent situations and preventing further violence. Little attention has been given to primary prevention - addressing the root causes with the goal of reducing the number of new cases. Recent hallmark publications have called for increased investment in primary prevention. As part of the Global Campaign for Violence Prevention, WHO is giving increased attention to the primary prevention of intimate partner violence and sexual violence. Preventing intimate partner and sexual violence against women: taking action and generating evidence is an important new tool for violence prevention researchers, practitioners and advocates provides a planning framework for developing policies and programmes for the prevention of intimate partner and sexual violence. This guide outlines the nature, magnitude, risks and consequences of intimate partner and sexual violence. It outlines strategies to prevent these forms of violence against women and describes how these can be tailored to the needs, capacities and resources of particular settings. It also emphasizes the importance of integrating scientific evaluation into all prevention activities in order to expand current knowledge of what works. The manual describes interventions of known effectiveness, those supported by emerging evidence, and those that could potentially be effective, but have yet to be sufficiently evaluated for their impact. For instance, school-based programmes to prevent violence occurring in dating relationships have been shown to be effective in randomized trials in the USA and Canada. Evidence is emerging for the effectiveness of empowerment approaches which use microfinance combined with gender-equality training or are based on communications and relationship skills training such as the Stepping Stones training package, which has been widely used in low- and middle-income countries. Strategies that aim to prevent intimate partner and sexual violence through reducing the harmful use of alcohol also show promise. A six-step framework for planning, implementing and evaluating such prevention programmes and policies is presented. This document is primarily aimed at policy-makers, programme planners and donors from public health and related sectors who seek to advance the prevention of intimate partner and sexual violence against women. In addition to the principal audience, other interested parties will include those working in other government sectors such as education, child welfare, social care, criminal justice and departments of women or gender equality; advocates from civil society organizations; local authorities; environmental and urban planners; and researchers.

Agroecology in China Luo Shiming,Stephen R. Gliessman.2017-03-27 Key features: Reviews the development of agroecology in China, including research, practice, management, and education regarding challenges for rural and agricultural progress Presents information from sources not readily available in the West about agricultural development in China during the last several decades Provides models and indicates starting points for future research and practice Addresses how to meet future challenges of agroecosystems from the field to the table in China from scientific, technological, and management perspectives During the past 30 years, industrialization has fundamentally changed traditional rural life and agricultural practices in China. While the incomes of farmers have increased, serious issues have been raised concerning the environment, resource depletion, and food safety. In response, the Chinese government and Chinese scientists encouraged eco-agriculture, the practice of agroecology principles and philosophy, as a way to reduce the negative consequences of large-scale industrialized systems of farming. Agroecology in China: Science, Practice, and Sustainable Management represents the work of experts and leaders who have taught, researched, and expanded Chinese agroecology and eco-agriculture for more than 30 years. It reviews decades of agricultural change to provide an integrated analysis of the progress of research and development in agroecological farming practices. The book contains research on traditional and newly developed agricultural systems in China, including intercropping systems, rainfall harvest systems, and rice-duck, rice-fish, and rice-frog co-culture systems. It covers current eco-agriculture practices in the major regions of China according to climate conditions. The book closes with a discussion of the major technical approaches, necessary policy support, and possible major development stages that must occur to allow broader agroecological implementations toward the sustainability of future food systems in China. Presenting eco-agriculture systems that are somewhat unique in comparison to those of the United States, Latin America, and Europe, Agroecology in China gives insight on how Chinese agroecologists, under the political and cultural systems specific to China, have created a strong foundation for ecologically sound agroecosystem design and management that can be applied and adapted to food systems elsewhere in the world. By using selected regional examinations of agroecological efforts in China as examples, this book provides models of how to conduct research on a broad range of agroecosystems found worldwide.

Climate Change and Global Food Security Rattan Lal,Norman Uphoff,Bobby A. Stewart,David O. Hansen.2005-05-26 In order to feed their burgeoning populations, developing nations will need to double cereal

production by the year 2050. This increase will have to come from existing land, as little potential exists for bringing new land under cultivation -- a daunting prospect when one realizes that increased use and significantly higher concentrations of carbon dioxide have led to a severe depletion of the carbon pool in the world's soils. This is especially telling in developing countries where tropical climates further compromise the soil's ability to recover. In *Climate Change and Global Food Security*, bestselling editor Rattan Lal heads up a team of the world's top soil scientists and ecologists to document the history of this impending agricultural crisis and explore possible solutions. Throughout this timely text, the authors address six complex themes: 1. The impact of projected climate change on soil quality, water resources, temperature regime, and growing season duration on net primary productivity of different biomes 2. Soil carbon dynamics under changing climate 3. The impact of changes in carbon dioxide and ecological environments on agronomic yields and food production in different regions of the world 4. World food demands and supply during the 21st century 5. Policy and economic issues related to carbon trading and enhancing agricultural production 6. Research and development priorities for enhancing soil carbon pool and food security This hard-hitting text is essential reading for anyone involved with soil and crop sciences as well as policy makers and change agents who need to come to the forefront of this issue armed with the latest information and viable solutions.

The Mexican War, 1846-1848 Karl Jack Bauer.1992-01-01 Much has been written about the Mexican war, but this . . . is the best military history of that conflict. . . . Leading personalities, civilian and military, Mexican and American, are given incisive and fair evaluations. The coming of war is seen as unavoidable, given American expansion and Mexican resistance to loss of territory, compounded by the fact that neither side understood the other. The events that led to war are described with reference to military strengths and weaknesses, and every military campaign and engagement is explained in clear detail and illustrated with good maps. . . . Problems of large numbers of untrained volunteers, discipline and desertion, logistics, diseases and sanitation, relations with Mexican civilians in occupied territory, and Mexican guerrilla operations are all explained, as are the negotiations which led to war's end and the Mexican cession. . . . This is an outstanding contribution to military history and a model of writing which will be admired and emulated.-*Journal of American History*. K. Jack Bauer was also the author of *Zachary Taylor: Soldier, Planter, Statesman of the Old Southwest* (1985) and *Other Works*. Robert W. Johannsen, who introduces this Bison Books edition of *The Mexican War*, is a professor of history at the University of Illinois, Urbana, and the author of *To the Halls of Montezumas: The Mexican War in the American Imagination* (1985).

Effective Schools and Classrooms David A. Squires,William G. Huitt,John K. Segars.1983 A model for improving school and classroom effectiveness must pay attention to: (1) leadership; (2) school climate; (3) supervision; (4) teacher behaviors; (5) student behaviors; and (6) student achievement. Chapter 1 of this book on effective schools and classrooms introduces these important issues and describes a model incorporating these issues. Chapter 2 reviews research about student and teacher behaviors and how they affect classroom effectiveness. Chapter 3 suggests ways administrators can help teachers promote student involvement, coverage, and success through positive supervision. Research concerning effective schools is the topic of chapter 4, and chapter 5 demonstrates how indicators of effective schools are grouped into the more general categories of school climate and leadership. Chapter 6 uses a hypothetical case study to show how school leadership processes can promote a school climate where there is an academic emphasis, an orderly environment, and expectations for success. The chapter ends with suggestions for superintendents and school boards for improving student achievement. Chapter 7 includes a questionnaire for assessing a school's effectiveness. The eighth chapter discusses principles of the school improvement process. A summary is offered in the ninth chapter, and appendices provide information on monitoring student behavior and the policy statement of a school district on school effectiveness. (JMK)

The Future of Development Financing F. Sagasti,K. Bezanson,F. Prada.2005-06-14 Today's international development financing system seems like a collection of disjointed entities that often work at cross purposes without being able to mobilize enough finance for developing countries in their efforts to reduce poverty and improve living standards. This book brings together the vast array of new initiatives in financing mechanisms and proposals to transform the development finance architecture. Based on four different scenarios for the next ten-year period, proposals are made for how to reach an effective system.

Sustainable Intensification Jules N. Pretty,Stella Williams,Camilla Toulmin.2012-06-25 Continued population growth, rapidly changing consumption patterns and the impacts of climate change and environmental degradation are driving limited resources of food, energy, water and materials towards critical thresholds worldwide. These pressures are likely to be substantial across Africa, where countries will have to find innovative ways to boost crop and livestock production to avoid becoming more reliant on imports and food aid. Sustainable agricultural intensification - producing more output from the same area of land while reducing the negative environmental impacts - represents a solution for millions of African farmers. This volume presents the lessons learned from 40 sustainable agricultural intensification programmes in 20 countries across Africa, commissioned as part of the UK Government's Foresight project. Through detailed case studies, the authors of each chapter examine how to develop productive and sustainable agricultural systems and how to scale up these systems to reach many more millions of people in the future. Themes covered include crop improvements, agroforestry and soil conservation, conservation agriculture, integrated pest management, horticulture, livestock and fodder crops, aquaculture, and novel policies and partnerships.

Tropical Forests and Climate N. Myers.2013-06-29 Tropical forests affect climate, and the removal of the forests will change climate. Or not? This book discusses basic questions on how far, if at all, tropical deforestation leads to climatic change. The question of this uncertainty is particularly addressed. One important consequence of the uncertainties of whether deforestation affects climate is how scientific findings best illuminate the policy-making process.

Social Work Management and Leadership John Lawler, Andy Bilson. 2009-10-16 Management and leadership are increasingly important within the organisation and delivery of social care services and now form part of the post qualification framework for social workers. Yet, whilst there is a relatively broad understanding of management concepts and their application in social care, their foundations often go unchallenged both by students and managers. Furthermore, leadership is open to a wide range of interpretations and is often ill-defined with the expectation that we share a common understanding of the term. This text promotes an appreciation of the development of management and leadership thinking and the different themes which inform current ideas. It considers these topics from a range of theoretical standpoints in order to stimulate readers to consider their own experience and expectations of management and leadership. It then demonstrates how these standpoints might promote innovative approaches to management and leadership within social care organisations and ways in which such organisations might then develop. The aim of this challenging text is to encourage critical and informed reflection on current practice. Social Work Management and Leadership is essential reading for students of management and leadership in social care as well as being an invaluable resource for managers who simply wish to consider new approaches to their practice.

Advances in Remote Sensing and Geo Informatics Applications Hesham M. El-Askary, Saro Lee, Essam Heggy, Biswajeet Pradhan. 2018-12-29 This edited volume is based on the best papers accepted for presentation during the 1st Springer Conference of the Arabian Journal of Geosciences (CAJG-1), Tunisia 2018. The book compiles a wide range of topics addressing various issues by experienced researchers mainly from research institutes in the Mediterranean, MENA region, North America and Asia. Remote sensing observations can close gaps in information scarcity by complementing ground-based sparse data. Spatial, spectral, temporal and radiometric characteristics of satellites sensors are most suitable for features identification. The local to global nature and broad spatial scale of remote sensing with the wide range of spectral coverage are essential characteristics, which make satellites an ideal platform for mapping, observation, monitoring, assessing and providing necessary mitigation measures and control for different related Earth's systems processes. Main topics in this book include: Geo-informatics Applications, Land Use / Land Cover Mapping and Change Detection, Emerging Remote Sensing Applications, Rock Formations / Soil Lithology Mapping, Vegetation Mapping Impact and Assessment, Natural Hazards Mapping and Assessment, Ground Water Mapping and Assessment, Coastal Management of Marine Environment and Atmospheric Sensing.
