Botero Sculptures Fernando Botero, Jean-Clarence Lambert. 1998 The work of contemporary Colombian artist Fernando Botero is well known throughout the world. His exaggerated rendering of fleshy human, animal, and still-life figures has become an unmistakable characteristic of his style. This beautifully illustrated volume is one of the few to focus solely on Botero's sculpture, which provides an ideal medium for his exploration of space and volume. The book showcases works in small and medium format as well as the famous monumental works that have made Botero the leading sculptor of the 20th century.

Nutrigenetics Martin Kohlmeier. 2012-12-31 Nutrigenetics: Applying the Science of Personal Nutrition provides a fully referenced, readable guide to understanding the rationale and importance of nutrigenetic applications and explains why single nutrition recommendations will not fit everybody or even a majority of modern humans. This book explains how genetic variation shapes individual nutrition requirements and sensitivities, presents questions to ask about reported gene-nutrient interactions, and what needs to be done before putting nutrigenetic tests to practical use. This book blends key concepts from the fields of genetics, biochemistry, epidemiology, public health, and clinical medicine to give a rich perspective on the genetically diverse nutritional needs and sensitivities of individuals in health and disease. A steadily increasing number of people order

genetic tests to find out what they should eat for better health, well being and performance, and an even greater number asks their healthcare providers about such tests. Most of the currently offered tests are not grounded in current knowledge, often absurdly so, but few professionals can explain why they are misguided. On the other hand, there are more evidence-supported genetic variants that can guide nutrition decisions, but again most healthcare providers know little about them, much less use them in their daily practice. There is a great need for a solidly evidence-based yet accessible book that explains the science of nutrigenetics and provides the tools to evaluate new nutrigenetic tests. Comprehensive coverage of the emerging science of nutritional genetics and its promise for individually tailored nutrition guidance Presents practical examples to enhance comprehension and spur additional research Offers a logical progression from what nutrigenetics is, to its possibilities in enhancing health

The Biology of the First 1,000 Days Crystal D Karakochuk, Kyly C. Whitfield, Tim J Green, Klaus Kraemer. 2017-09-22 The first 1,000 days, from conception to two years of age, is a critical period of growth and development. Exposures to dietary, environmental, hormonal, and other stressors during this window have been associated with an increased risk of poor health outcomes, some of which are irreversible. The book addresses this crucial interval of early life across biological disciplines, linking concepts related to all biological fields to outcomes during the first 1,000 days (e.g. fetal growth and pregnancy outcomes) and beyond (e.g. gut microbiome and cardiovascular disease later in life). The strength of this book lies in its cross-disciplinary nature.

RENAISSANCE METAPAINING; ED. BY PETER BOKODY. Péter Bokody, Alexander Nagel. 2020 The volume offers an overview of meta-pictorial tendencies in book illumination, mural and panel painting during the Italian and Northern Renaissance. It examines visual forms of self-awareness in

the changing context of Latin Christianity and claims the central role of the Renaissance in the establishment of the modern condition of art. Meta-painting refers to the ways in which artworks playfully reveal or critically expose their own fictiveness, and is considered a constitutive aspect of Western art. Its rise was connected to changes in the consumption of religious imagery in the sixteenth century and to the advent of the portable framed canvas, the single most important medium of modernity. While the key initial contributions of some Renaissance painters from Jan van Eyck to Andrea Mantegna have always been acknowledged, in the principal narrative the Renaissance has largely remained the naïve moment of realistic experimentation to be ultimately superseded by the complex reflexive developments in Early Modern art, following the Reformation.

Aspen Style Aerin Lauder.2017-09-27 What began as a small mining camp during the Colorado Silver Boom of the late nineteenth century has since become the preferred getaway of the world's elite. Treasured for what's above ground rather than below, Aspen, Colorado has a storied history almost as dense as the directory of A-listers who have adopted the jewel of Pitkin County as their second home, or who have settled in its slopes indefinitely. With an introduction from longtime resident Aerin Lauder, Aspen celebrates and pays homage to the stark glamour, the working-class history, and the romance of the virtually untouched landscape that gives the town the unique charisma that continues to draw new devotees with each season. Exploring the rustic-chic atmosphere of the Hotel Jerome, the architectural excellence of Herbert Bayer's restored Wheeler Opera House, and local culture found at Schlomo's Deli & Grill, to name a few, this deluxe volume is brought to life with stunning current and historical imagery capturing the prodigious evolution of this mountain town over the last century.

From September to October 2016, Valdés transformed the timeless majesty of Paris' Place Vendôme and added to its celebrated and ever-changing history with an exhibition of six monumental sculptures. An artist known for his depiction of women in media, Valdés, using aluminum, iron, and marble, has created some of his most alluring works of art to date. This new monograph captures the astounding spectacle as a whole from start to finish and is the next installment in the story that is the legend of Manolo Valdés.

Forest Society Norman B. Schwartz.2016-11-11 In recent years, Mesoamerican anthropologists have been shifting the focus of their research from structural-functional analyses of small communities to studies of communities as the products of the interaction of microsocial and macrosocial processes. Greater attention is being given to relationships between ecology and society; between state power and local community culture; and among world economics, regional politics, and subregional sociocultural patterns. Forest Society examines the social history of Peten, in the lowlands of Northern Guatemala, in the context of these changing relationships. The author contends that, for 250 years, roughly from the 1720s to the 1970s, the sociocultural system of Peten endured with remarkable continuity, not in spite of changes in the hinterland region but, to an important degree, because of them. During that time, there was relatively little change in the socioeconomic

composition of and the relationships between Peten's various social sectors and ethnic groups. Norman B. Schwartz argues that relationships between the material base (ecology, technology, and economy) of society in Peten demography and the struggle of individuals and groups to control resources gave Peteneros an opportunity, and, at the same time, compelled them gradually to build a stable, moderate society, marked by continuity of social status and commutative connections between ethnicity, community, and social class. He also discusses the new colonization of the 1970s and the disastrous civil war of the 1980s and the reasons why these changes are finally eroding the stability of Peten's society. Forest Society will interest scholars and students working in the fields of anthropology, history, and Latin American studies.

The Encyclopedia of New York City Kenneth T. Jackson, Lisa Keller, Nancy Flood.2010-12-01

Covering an exhaustive range of information about the five boroughs, the first edition of The Encyclopedia of New York City was a success by every measure, earning worldwide acclaim and several awards for reference excellence, and selling out its first printing before it was officially published. But much has changed since the volume first appeared in 1995: the World Trade Center no longer dominates the skyline, a billionaire businessman has become an unlikely three-term mayor, and urban regeneration—Chelsea Piers, the High Line, DUMBO, Williamsburg, the South

Bronx, the Lower East Side—has become commonplace. To reflect such innovation and change, this definitive, one-volume resource on the city has been completely revised and expanded. The revised edition includes 800 new entries that help complete the story of New York: from Air Train to E-ZPass, from September 11 to public order. The new material includes broader coverage of subject areas previously underserved as well as new maps and illustrations. Virtually all existing entries—spanning architecture, politics, business, sports, the arts, and more—have been updated to reflect the impact of the past two decades. The more than 5,000 alphabetical entries and 700 illustrations of the second edition of *The Encyclopedia of New York City* convey the richness and diversity of its subject in great breadth and detail, and will continue to serve as an indispensable tool for everyone who has even a passing interest in the American metropolis.

Sea Turtles of the Eastern Pacific Jeffrey A. Seminoff, Bryan P. Wallace. 2012-06 The oceanographic conditions that make this an epicenter of sea turtle activity promote massive artisanal and industrial fishing efforts that, coupled with illegal harvesting of eggs and turtles, have led to declines of several turtle populations in the region. The essays and stories in *Sea Turtles of the Eastern Pacific* describe for the first time the history of this exploitation, as well as recent sea turtle conservation initiatives and scientific research in the region.

Ecology of Threatened Semi-Arid Wetlands Salvador Sánchez-Carrillo, David G.

Angeler. 2011-04-23 Playing a critical role in both influencing climate change and mitigating its impacts, the world's diverse wetlands have become one of the world's most threatened ecosystems as unsustainable land-use practices coupled with irrational use of water have already resulted in large-scale wetlands loss and degradation. To develop sound management and conservation schemes to assure wetlands sustainability in the long term requires long-term understanding of wetlands

ecology. Yet until now, long-term interdisciplinary research into these systems has been limited to only a few systems from tropical or temperate climates (such as the Florida Everglades, and Czech biosphere reserve). This new book adds to the existing wetlands literature, providing a unique reference in basic and applied Mediterranean wetland ecology, based on results from long-term interdisciplinary research at the RAMSAR and UNESCO Biosphere site, of Las Tablas de Daimiel, Spain. Dating back to the early 1990s the research highlights changes in the biotic and abiotic environment in response to cumulative anthropogenic stressors, and provide guidance on applying this understand to sound management and conservation. With particular relevance to researchers dealing with semi-arid wetlands in the Mediterranean and elsewhere, as well as to resource managers, the book discusses the complexity of the interacting abiotic and biotic environment across different spatial and temporal scales and across various levels of biological hierarchy is highlighted, and reveals how management based on poor knowledge causes more damage than repair. The book will be of interest to researchers interested in freshwater ecology, hydrobotany, hydrology, geology, biogeochemistry, landscape ecology and environmental management.

Grazing Ecology and Forest History F. W. M. Vera.2000-01-01 It is a widely held belief that a climax

vegetation of closed forest systems covered the lowlands of Central and Western Europe before man intervened in prehistoric times to develop agriculture. If this intervention had not taken place, the forest would still be there, and if left the grassland vegetation and fields now present would revert to a natural closed forest state, although with a reduced number of wild species. This book, which an updated and expanded version of the author's 1997 thesis (presented to the Wageningen University, Netherlands), challenges the traditional view, using examples from history, pollen analyses and studies on the ecology of tree and shrub species such as oak and hazel. It tests the hypothesis that the climax vegetation is a closed canopy forest, against the alternative hypothesis that species composition and vegetational succession were governed by large herbivores, and that the Central and Western European lowlands were covered by a park-like landscape consisting of grasslands, scrub, solitary trees and groves bordered by a mantle and fringe vegetation. Comparative information from the eastern USA is also included throughout the book (this was not present in the thesis), because the forests there are commonly regarded as being analogous to the primeval vegetation in Europe. The book is arranged in 7 chapters: (1) General introduction and formulation of the problem; (2) Succession, the climax forest and the role of large herbivores; (3) Palynology, the forest as climax in prehistoric times and the effects of humans; (4) The use of the wilderness from the Middle Ages up to 1900; (5) Spontaneous succession in forest reserves in the lowlands of Western and Central Europe - including examples from France, Germany, Austria, Slovenia, Sweden, Poland; (6) Establishment of trees and shrubs in relation to light and grazing; and (7) Final synthesis and conclusions. Twelve appendices are included giving further information, and there are 67 pages of references and a subject index.

Henri Labrouste Henri Labrouste, Corinne Bélière, Barry Bergdoll, Marc Le Cœur, Martin Bressani, Marc Grignon, Marie Hélène de La Mure, Bertrand Lemoine, Sigrid de Jong, David Van Zanten, Gérard Uniack. 2012 Henri Labrouste is one of the few nineteenth-century architects consistently lionized as a precursor of modern architecture throughout the twentieth century and into our own time. The two magisterial glass-and-iron reading rooms he built in Paris gave form to the idea of the modern library as a collective civic space. His influence was both immediate and long-lasting, not only on the development of the modern library but also on the exploration of new paradigms of space, materials and luminosity in places of great public assembly. Published to accompany the first exhibition devoted to Labrouste in the United States--and the first anywhere in the world in nearly 40 years--this publication presents nearly 225 works in all media, including

drawings, watercolors, vintage and modern photographs, film stills and architectural models. Essays by a range of international architecture scholars explore Labrouste's work and legacy through a variety of approaches.

The Eyes of Earth Solmaz Daryani.2021-05-21 THE EYES OF EARTH tells a deeply personal story about the environmental disaster at Lake Urmia as seen through the eyes of Solmaz Daryani, a self-taught photographer, who grew up on the lake. Her grandfather ran a lakefront hotel in the tourist port of Sharafkhaneh and her uncles were sailors. She spent her childhood summers with her grandparents on the lake and, less than a decade ago, her grandfather hosted dozens of people every day. It was the disappearing lake and faded childhood memories that induce her to take the camera and start documenting what was left of the largest lake in the Middle East and the second largest salt lake on the planet.
