Sap Business Planning and Consolidation 10.1 for Classic Version Ram

Penumutcha.2015-11-24 This book will provide in-depth analysis of concepts and step by step configurations for planning and consolidation for SAP BPC 10.1 classic version. We start with detail explanation of BPC components used for both planning and consolidation then we move on to consolidation specific pieces. We will examine the purpose of each component, where it fits into the whole process, and what options are available to configure the system. Rather than just reading about how to create an object, we'll actually perform a demo exercise with step-by-step instructions for configuration. I had also included backup copies which can be installed on your system directly if needed, rather developing them. For planning demo, I had used cost center planning which includes features like creating dimensions and models; master and transactional data loads; input schedules; reports; logic scripts and so on. For consolidation demo, I had considered commonly used legal consolidation process flow which includes net Income to retained earnings movements, currency translations, IC Matching and Booking, US Eliminations, COI, Minority Interest and Goodwill. Along with the configuration steps, each chapter provides analysis of the results of the exercise and their significance within a financial statement.

Business Intelligence Jörg Greitemeyer.2002-04-23 Inhaltsangabe:Abstract: The worldwide process of globalization makes it necessary for a firm to collect information about its external environment (competitors, stakeholders, products, markets, etc.) and to relate it with the internal information of the firm. In 1985 Porter and Millar (1985) described an information revolution that affects competition in different ways. Collecting internal and external data is the necessary first step to

guarantee a valid information base for strategic decisions and successful actions. The evaluation of these data for decision-making processes and the ability to see important relations and structures in the data can be supported by new IT-applications, called Business Intelligence (henceforth BI). This thesis examines the latest developments of information technologies from the Resource-based perspective of Strategic Management. The general question that motivates this thesis and needs to be answered is: Can the use of Business Intelligence Applications lead to a sustainable competitive advantage? On a more concrete level it asks, if Business Intelligence solutions can be resources that lead directly to a long-lasting competitive advantage or at least to a temporary advantage. Answering those questions pursues the aim of making a step towards the operationalization of the Resource-based View (RBV) and the more specialized Dynamic Capability View (DCV). The subject of the analysis is a specific Business Intelligence software solution, which has been chosen because it is representative of all BI applications. It is offered worldwide on the markets for analytical applications in Europe, Asia and America and based on the common data warehouse technology. This thesis is supposed to provide the base for possible further empirical work regarding this topic. The empirical work of this thesis is done in the mode of a case study concentrating on a set of information technology products. The examination of a specific application that is offered on the market Business Intelligence on an analysis based on the Resource-based view enables the proving of statements about BI with the help of concrete examples. The case study is based to substantial parts on information derived from personal interviews with Siemens Business Services, Germany and information available in the Internet. The first part of this thesis (section 2) gives an introduction and categorization of Business Intelligence. Using the example of the [...] New SAP Controlling Planning Interface Martin Munzel. With enhancement package 6, SAP has done some renovation work to a number of CO planning functions as well as master data maintenance. These functions are accessible via the NetWeaver Business Client as well of the Analysis Client which virtually provides a means of uploading plan data from Excel. The following transactions are affected by the renovation: - Primary cost planning for cost centers and projects - Overall cost planning- Activity planning - Master data maintenance for cost centers etc. The new transactions do not only provide a new look-and-feel; with the integration of BW-IP (Integrated Planning) functionality into SAP ERP, you can also show actual figures as well as historical plan data in your planning sheets. This functionality is brand new and has only been implemented for a few SAP clients. This book will provide a visual impression of the improved planning and maintenance transactions, with both screenshots and videos.

Unterstützung von Planungsprozessen mit SAP BW-BPS Dominik Dubber.2005-06-03

Inhaltsangabe: Einleitung: Grundsätzliches Ziel dieser Arbeit ist es, kritisch zu hinterfragen, in wie weit computergestützte Führungsinformationssysteme bzw. ein spezielles Softwareprodukt in der Lage sind, den Ablauf des Planungsprozesses abzubilden und effizienter zu gestalten. Außerdem wird versucht, die Mängel einer softwaremäßigen Unterstützung festzustellen und zu erläutern. Einen Schwerpunkt bilden die Ausführungen zum Planungsprozess, seiner Strukturierung und Formen seiner Koordination. Es wird herausgearbeitet, wie geplant wird, welche spezifischen Gegebenheiten in der Praxis dabei zu berücksichtigen und wo wesentliche Ansatzpunkte zur Verbesserung zu sehen sind. Mit Hilfe einer graphischen Darstellung sollen die Teilkomponenten des Gegenstromverfahrens festgestellt werden, um daraus die Anforderungen an Planungsprozesse zu erstellen, denen der Leistungsumfang einer Software zu entsprechen hat. Gang der Untersuchung: Der Zielsetzung folgend wird zunächst das Themengebiet der Planung näher beleuchtet. Hierzu wird der Begriff Planung definiert und abgegrenzt. Die Aufgaben und Funktionen der Planung wie auch die Anforderungen, die sie zu erfüllen hat, werden dargestellt, um sich anschließend einer ausführlichen Betrachtung des Planungsprozesses zu widmen. Strukturiert wird dieser nach sachlogischen und zeitlichen Aspekten sowie danach, auf welcher inhaltlichen Stufe und nach welcher Form der Koordination er durchgeführt wird. Verschiedenste Gesichtspunkte und Eigenschaften der Planung werden anhand dieser Systematisierung erläutert. Mögliche Planungsverfahren als Form der Koordination werden beschrieben sowie deren Vor- und Nachteile geschildert. Ein idealtypischer Ablauf nach dem Gegenstromverfahren wird vorgeführt und modellartig aufbereitet, um die für die Umsetzung in die Praxis notwendigen Teilprozesse festzustellen. Wie beinahe jeder andere Prozess der Unternehmenssteuerung auch vollzieht sich Planung in der heutigen Zeit vielfach mit Unterstützung elektronischer Datenverarbeitungssysteme. Ein kurzer historischer Abriss soll helfen, die Entwicklung moderner Führungsinformationssysteme nachzuvollziehen. Als ein elementarer Bestandteil solcher Systeme wird das Konzept des Data Warehouse mit den damit eng verbundenen Technologien in seinen Grundzügen vorgestellt. Im Anschluss wird auf die Unterschiede zwischen verschiedenen DV-technischen Hilfsmitteln der Planung eingegangen. Anhand spezifischer Anforderungsmerkmale lassen sich [...]
