McKenzie's Law of Building and Engineering Contracts and Arbitration H. S. McKenzie, Peter A. Ramsden. 2014 This is the first book to explain the law applicable to the updated Joint Building Contracts Committee (JBCC) Principle Building Agreement (6th edition, 2014) and the Engineering General Conditions of Contract for Construction Works (2nd edition, 2010), which are both annexed to the book and extensively cross-referenced to assist the reader. The book also cross-references the relevant clauses of the FIDIC Contract Agreement (1999). Disputes arising out of building contracts are often referred to arbitration for solution. Buildings for Education Stefano Della Torre, Massimiliano Bocciarelli, Laura Daglio, Raffaella Neri. 2019-01-01 This open access book presents theoretical and practical research relating to the vast, publicly financed program for the construction of new schools and the reorganization of existing educational buildings in Italy. This transformative process aims to give old buildings a fresh identity, to ensure that facilities are compliant with the new educational and teaching models, and to

improve both energy efficiency and structural safety with respect to seismic activity. The book is divided into three sections, the first of which focuses on the social role of the school as a civic building that can serve the needs of the community. Innovations in both design and construction processes are then analyzed, paying special attention to the Building Information Modeling (BIM) strategy as a tool for the integration of different disciplines. The final section is devoted to the built heritage and tools, technologies, and approaches for the upgrading of existing buildings so that they meet the new regulations on building performance. The book will be of interest to all who wish to learn about the latest insights into the challenges posed by, and the opportunities afforded by, a comprehensive school building and renovation program.

The Building Contract Eyvind Finsen.2005 Since 1991 the JBCC Principal Building Agreement has been used almost exclusively in the building industry for projects in the private sector. Recently the State took the policy decision that it too would use these agreements subject to appropriate modification, and these modifications were incorporated in the March 2005 edition of the JBCC

Principal Building Agreement. This edition of The Building Contract deals not only with the provisions of the Agreement as they are applied in State projects, but also how the Agreement, and its associated documents, is employed in conventional projects in the private sector. Innovations such as adjudication, the advance payment guarantee, and the Minor Works Agreement, are also discussed. The user is armed with knowledge of the nature of the contractual relationship and an understanding of the way in which the agreements are intended to regulate it. -- page 4 of cover.

Ferry and Brandon's Cost Planning of Buildings Richard Kirkham.2014-09-29 This new edition of the classic quantity surveying textbook retains its basic structure but has been thoroughly updated to reflect recent changes in the industry, especially in procurement. Although over the last 20 years a number of new procurement methods have evolved and become adopted, the recession has seen many clients revert to established traditional methods of procurement so the fundamentals of cost planning still apply - and should not be ignored. The first edition of this leading textbook was published in 1964 and it continues to provide a comprehensive introduction to the practice and procedures of cost planning in the procurement of buildings. This 9th edition has been thoroughly updated to reflect changes that have occurred in the UK construction industry in the past six years. Whilst retaining its core structure of the three-phase cost planning process originally developed by Ferry and Brandon, the text provides a thorough grounding in contemporary issues including procurement innovation, whole life cycle costing and modelling techniques. Designed to support the core cost planning studies covered by students reading for degrees in quantity surveying and construction management, it provides a platform for understanding the fundamental importance of effective cost planning practice. The principals of elemental cost planning are covered from both pre- and post- contract perspectives; the role of effective briefing and client/stakeholder engagement

as best practice is also reinforced in this text. This new edition: Addresses The Soft Landings Framework (a new govt. initiative, especially for schools) to make buildings perform radically better and much more sustainably. Puts focus on actual performance in use at brief stage, during design and construction, and especially before and after handover. Covers recent changes in procurement, especially under the NEC and PFI Provides more on PPP and long-term maintenance issues Offers an improved companion website with tutorial worksheets for lecturers and Interactive spreadsheets for students, e.g. development appraisal models; lifecycle costing models

Construction Innovation Finn Orstavik, Andrew R. J. Dainty, Carl Abbott.2015-04-20 Construction innovation is an important but contested concept, both in industry practice and academic reflection and research. A fundamental reason for this is the nature of the construction industry itself: the industry and the value creation activities taking place there are multi-disciplinary, heterogeneous, distributed and often fragmented. This book takes a new approach to construction innovation, revealing different perspectives, set in a broader context. It coalesces multiple theoretical and practice-based views in order to stimulate reflection and to prepare the ground for further synthesis. By being clear, cogent and unambiguous on the most basic definitions, it can mobilise a plurality of perspectives on innovation to promote fresh thinking on how it can be studied, enabled, measured, and propagated across the industry. This book does not gloss over the real-life complexity of

construction innovation. Instead, its authors look explicitly at the challenges that conceptual issues entail and by making their own position clear, they open up fresh intellectual space for reflection. Construction Innovation examines innovation from different positions and through different conceptual lenses to reveal the richness that the theoretical perspectives offer to our understanding of the way that the construction sector actors innovate at both project and organizational levels. The editors have brought together here leading scholars to deconstruct the concept of innovation and to discuss the merits of different perspectives, their commonalities and their diversity. The result is an invaluable sourcebook for those studying and leading innovation in the design, the building and the maintenance of our built environment.
