Essentials of Bioinformatics, Volume I Noor Ahmad Shaik, Khalid Rehman Hakeem, Babajan Banaganapalli, Ramu Elango. 2019-03-27 Bioinformatics is an integrative field of computer science, genetics, genomics, proteomics, and statistics, which has undoubtedly revolutionized the study of biology and medicine in past decades. It mainly assists in modeling, predicting and interpreting large multidimensional biological data by utilizing advanced computational methods. Despite its enormous potential, bioinformatics is not widely integrated into the academic curriculum as most life science students and researchers are still not equipped with the necessary knowledge to take advantage of this powerful tool. Hence, the primary purpose of our book is to supplement this unmet need by providing an easily accessible platform for students and researchers starting their career in life sciences. This book aims to avoid sophisticated computational algorithms and programming. Instead, it mostly focuses on simple DIY analysis and interpretation of biological data with personal computers. Our belief is that once the beginners acquire these basic skillsets, they will be able to handle most of the bioinformatics tools for their research work and to better understand their experimental outcomes. Unlike other bioinformatics books which are mostly theoretical, this book provides practical examples for the readers on state-of-the-art open source tools to solve biological problems. Flow charts of experiments, graphical illustrations, and mock data are included for quick reference. Volume I is therefore an ideal companion for students and early stage professionals wishing to master this blooming field.

Fatal Equilibrium Marshall Jevons. 1986-07-12 At Harvard, tenure decisions are a matter of life -- or death. For Dennis Gossen, the economics department whiz kid currently being considered for tenure, it's definitely death. When he's turned down by the high-and-mighty Promotion and Tenure Committee, Gossen commits suicide. A Question of Cost Accounting... Or does he? It's hard to imagine why a young man with a brilliant scholarly future -- at Harvard or not -- would come up with an equation in which the opportunity cost of killing himself (a high price, considering his potential earnings) would be outweighed by the emotional cost of failing to receive tenure. ... Or Utility? Then two members of the P and T Committee are murdered, and it becomes clear to Professor Henry Spearman of the Economics Department that the killer must be on the committee. But which of his illustrious colleagues would have significantly increased his -- or her -- utility (i.e., happiness) by murdering a faculty member or two? Or three?
