Cultural Techniques Jörg Dünne, Kathrin Fehringer, Kristina Kuhn, Wolfgang Struck. 2020-08-24

This volume presents the preliminary results of the work carried out by the interdisciplinary cultural techniques research lab at the University of Erfurt. Taking up an impulse from media studies, its contributions examine —from a variety of disciplinary perspectives—the interplay between the formative processes of knowledge and action outlined within the conceptual framework of cultural techniques. Case studies in the fields of history, literary (and media) studies, and the history of science reconstruct seemingly fundamental demarcations such as nature and culture, the human and the nonhuman, and materiality and the symbolical order as the result of concrete practices and operations. These studies reveal that particularly basic operations of spatialization form the very conditions that determine emergence within any cultural order. Ranging from manual and philological paper work to practices of opening up and closing off spaces and collective techniques of assembly, these case studies replace the grand narratives of cultural history focusing on micrological examinations of specific constellations between human and nonhuman actors.

Astrofuturism De Witt Douglas Kilgore. 2010-08-03 *Astrofuturism: Science, Race, and Visions of Utopia in Space* is the first full-scale analysis of an aesthetic, scientific, and political movement that sought the amelioration of racial difference and social antagonisms through the conquest of space. Drawing on the popular science writing and science fiction of an eclectic group of scientists, engineers, and popular writers, De Witt Douglas Kilgore investigates how the American tradition of technological utopianism responded to the political upheavals of the twentieth century. Founded in the imperial politics and utopian schemes of the nineteenth century, astrofuturism envisions outer space as an endless frontier that offers solutions to the economic and political problems that dominate the modern world. Its advocates use the conventions of technological and scientific conquest to consolidate or challenge the racial and gender hierarchies codified in narratives of exploration. Because the icon of space carries both the imperatives of an imperial past and the democratic hopes of its erstwhile subjects, its study exposes the ideals and contradictions endemic to American culture. Kilgore argues that in the decades following the Second World War the subject of race became the most potent signifier of political crisis for the predominantly white and male ranks of astrofuturism. In response to criticism inspired by the civil rights movement and the new left, astrofuturists imagined space frontiers that could extend the reach of the human species and heal its historical wounds. Their work both replicated dominant social presuppositions and supplied the resources necessary for the critical utopian projects that emerged from the antiracist, socialist, and feminist movements of the twentieth century. This survey of diverse bodies of literature conveys the dramatic and creative syntheses that astrofuturism envisions between people and machines,

social imperatives and political hope, physical knowledge and technological power. Bringing American studies, utopian literature, popular conceptions of race and gender, and the cultural study of science and technology into dialogue, Astrofuturism will provide scholars of American culture, fans of science fiction, and readers of science writing with fresh perspectives on both canonical and cutting-edge astrofuturist visions.

War Stars Howard Bruce Franklin.2008 In this new and expanded edition of an already classic work, H. Bruce Franklin brings the epic story of the superweapon and the American imagination into the ominous twenty-first century, demonstrating its continuing importance both to comprehending our current predicament and to finding ways to escape from it. Sweeping through two centuries of American culture and military history, Franklin traces the evolution of superweapons from Robert Fulton's eighteenth-century submarine through the strategic bomber, atomic bomb, and Star Wars to a twenty-first century dominated by weapons of mass destruction, real and imagined.

Interweaving culture, science, technology, and history, he shows how and why the American pursuit of the ultimate defensive weapon -- guaranteed to end all war and bring universal triumph to American ideals -- has led our nation and the world into an epoch of terror and endless war.

Think! Different Andreas Boskugel.2015-03-25 Think! Different is a different kind of self-help book: the author, Andreas Boskugel, is well-known in Europe and appreciated for his clear and direct manner. Boskugel has taken the law of attraction to its systematic and logical conclusion! This book is completely free of otherwise typical references to moral or religious standards because the law of attraction - like all natural laws - isn't based on morality or religion. Consequently the author has a very different take than do others on success; for example, he doesn't idolize hard work, honesty and gratitude ad absurdum, for these are only religious and cultural based opinions and actually contradict the law of attraction. The author also forgoes otherwise typical teachings about what is right or wrong; after all, what is right is individually defined. Feigned pity or morality sermons are also not included in this work. This work is for those who love the integrity of the law of attraction and prefer clarity over political correctness. And it's for those who really want to get somewhere in life and who therefore question existing opinions. It's for people who are able to think on their own instead of going with the flow. For many, it was not until reading this book that they finally understood the law of attraction, for the topics in this book are more logically organized than in other popular works, and insights are offered that can dramatically improve the lives of readers. Completely new insights about the existing laws of life can help readers become invincible masters of their own destiny. Keywords: Law of Attraction, Self-Help, Success, Wealth, Dream, Wish Fulfillment, Love, Relationship, Money

Ahram.2020-07-03 This book addresses emerging issues concerning the integration of artificial intelligence systems in our daily lives. It focuses on the cognitive, visual, social and analytical aspects of computing and intelligent technologies, and highlights ways to improve the acceptance, effectiveness, and efficiency of said technologies. Topics such as responsibility, integration and training are discussed throughout. The book also reports on the latest advances in systems engineering, with a focus on societal challenges and next-generation systems and applications for meeting them. Based on the AHFE 2020 Virtual Conference on Software and Systems Engineering,

and the AHFE 2020 Virtual Conference on Artificial Intelligence and Social Computing, held on July 16–20, 2020, it provides readers with extensive information on current research and future challenges in these fields, together with practical insights into the development of innovative services for various purposes.

Hitler's Professors Max Weinreich.1999-01-01 This classic book examines the role of leading scholars, philosophers, historians, and scientists—in Hitler's rise to power and eventual war of extermination against the Jews. Written in 1946 by one of the greatest scholars of European Jewish history and culture, it is now reissued with a new introduction by the prominent historian Martin Gilbert. Dr. Weinreich's main thesis is that 'German scholarship provided the ideas and techniques that led to and justified unparalleled slaughter.' . . . In its implications and honest presentation of the facts [this book] constitutes the best guide to the nature of Nazi terror that I have read so far.—Hannah Arendt, *Commentary* Mr. Weinreich's book, by the wealth of its material and by its intelligent approach, offers the reader—in addition to a thorough treatment of the Jewish aspect—many opportunities to think about the role of scholarship in a totalitarian society.—Hans Kohn, *New York Times Book Review* Building, in the immediate aftermath of the war, on a formidable bibliography of books, pamphlets, and articles, Weinreich provides erudite evidence of the scale and ramifications of Nazi support in German intellectual life.—Martin Gilbert, from the introduction.

Seeing from Above Mark Dorrian, Frédéric Pousin.2013-10-03 The view from above, or the 'bird's-eye' view, has become so ingrained in contemporary visual culture that it is now hard to imagine our world without it. It has risen to pre-eminence as a way of seeing, but important questions about its effects and meanings remain unexplored. More powerfully than any other visual modality, this image of 'everywhere' supports our idea of a world-view, yet it is one that continues to be transformed as technologies are invented and refined. This innovative volume, edited by Mark Dorrian and Frederic Pousin, offers an unprecedented range of discussions on the aerial view, covering topics from sixteenth-century Roman maps to the Luftwaffe's aerial survey of Warsaw to Google Earth. Underpinned by a cross-disciplinary approach that draws together diverse and previously isolated material, this volume examines the politics and poetics of the aerial view in relation to architecture, art, film, literature, photography and urbanism and explores its role in areas such as aesthetics and epistemology. Structured through a series of detailed case studies, this book builds into a cultural history of the aerial imagination.

New Natures Dolly Jørgensen, Finn Arne Jørgensen, Sara B. Pritchard.2013-07-08 *New Natures* broadens the dialogue between the disciplines of science and technology studies (STS) and environmental history in hopes of deepening and even transforming understandings of human-nature interactions. The volume presents richly developed historical studies that explicitly engage with key STS theories, offering models for how these theories can help crystallize central lessons from empirical histories, facilitate comparative analysis, and provide a language for complicated historical phenomena. Overall, the collection exemplifies the fruitfulness of cross-disciplinary thinking. The chapters follow three central themes: ways of knowing, or how knowledge is produced and how this mediates our understanding of the environment; constructions of environmental expertise, showing how expertise is evaluated according to categories, categorization, hierarchies, and the power afforded to expertise; and lastly, an analysis of networks, mobilities, and boundaries, demonstrating how knowledge is both diffused and constrained and what this means for humans and the environment. Contributors explore these themes by discussing a wide array of topics, including farming, forestry, indigenous land management, ecological science, pollution, trade, energy, and outer space, among others. The epilogue, by the eminent environmental historian Sverker Sörlin, views the deep entanglements of humans and nature in contemporary urbanity and argues we

should preserve this relationship in the future. Additionally, the volume looks to extend the valuable conversation between STS and environmental history to wider communities that include policy makers and other stakeholders, as many of the issues raised can inform future courses of action.

Progress and Visions in Quantum Theory in View of Gravity Felix Finster, Domenico Giulini, Johannes Kleiner, Jürgen Tolksdorf. 2020-04-09 This book focuses on a critical discussion of the status and prospects of current approaches in quantum mechanics and quantum field theory, in particular concerning gravity. It contains a carefully selected cross-section of lectures and discussions at the seventh conference “Progress and Visions in Quantum Theory in View of Gravity” which took place in fall 2018 at the Max Planck Institute for Mathematics in the Sciences in Leipzig. In contrast to usual proceeding volumes, instead of reporting on the most recent technical results, contributors were asked to discuss visions and new ideas in foundational physics, in particular concerning foundations of quantum field theory. A special focus has been put on the question of which physical principles of quantum (field) theory can be considered fundamental in view of gravity. The book is mainly addressed to mathematicians and physicists who are interested in fundamental questions of mathematical physics. It allows the reader to obtain a broad and up-to-date overview of a fascinating active research area.

New German Architecture Albert Speer. 2020-04-30 This is a dual language (German/English) reprint of the now extremely rare and expensive book, *Neue Deutsche Baukunst*, published in 1941 to showcase the architectural beauty of the building programme instituted by National Socialist Germany. Book consists of photographs of these new structures with details of the architect or artist involved in the project.

History of an Obsession Klaus P. Fischer. 2001-04-01 Klaus Fischer charts the tortured history of German-Jewish relations over a millennium, from migration and ghettoization in the Middle Ages to enlightenment and emancipation in the eighteenth century to varieties of anti-Jewish prejudices in the Second Reich to the rise of pathological Judeophobia in the years 1918 to 1933. The aim of the book is to provide a historical explanation for this change in consciousness that began with a religious prejudice, moved to social and political discrimination, and ended up in annihilatory rage.

Rocket Development Robert H. Goddard. 2013-10 This is a new release of the original 1960 edition. *The Rocket into Planetary Space* Hermann Oberth. 2014-10-22 For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event. Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

Aeronautical Research in Germany Ernst Heinrich Hirschel, Horst Prem, Gero Madelung. 2012-12-06 From the pioneering glider flights of Otto Lilienthal (1891) to the advanced avionics of today's Airbus passenger jets, aeronautical research in Germany has been at the forefront of the birth and

advancement of aeronautics. On the occasion of the centennial commemoration of the Wright Brother's first powered flight (December 1903), this English-language edition of *Aeronautical Research in Germany* recounts and celebrates the considerable contributions made in Germany to the invention and ongoing development of aircraft. Featuring hundreds of historic photos and non-technical language, this comprehensive and scholarly account will interest historians, engineers, and, also, all serious airplane devotees. Through individual contributions by 35 aeronautical experts, it covers in fascinating detail the milestones of the first 100 years of aeronautical research in Germany, within the broader context of the scientific, political, and industrial milieus. This richly illustrated and authoritative volume constitutes a most timely and substantial overview of the crucial contributions to the foundation and advancement of aeronautics made by German scientists and engineers.

Doctors Under Hitler Michael H. Kater.2005-10-12 A brilliant attempt to explain the profound historical crisis into which medicine had plummeted during the Nazi period with the tried methods of social history.--*Historische Zeitschrift* The author has drawn from an extraordinary range of sources, and the weight of evidence he compiles will certainly give pause to anyone who still wants to believe that professionals kept their hands clean in this era of great and methodical crimes.--*Journal of Modern History* Kater's important book deserves close attention from historians of medicine and German historians alike.--*Isis* In this history of medicine and the medical profession in the Third Reich, Michael Kater examines the career patterns, educational training, professional organization, and political socialization of German physicians under Hitler. His discussion ranges widely, from doctors who participated in Nazi atrocities, to those who actively resisted the regime's perversion of healing, to the vast majority whose ideology and behavior fell somewhere between the two extremes. He also takes a chilling look at the post-Hitler medical establishment's problematic relationship to the Nazi past. -->

Spaceship Earth in the Environmental Age, 1960-1990 Sabine Höhler.2015-10-06 The idea of the earth as a vessel in space came of age in an era shaped by space travel and the Cold War. Höhler's study brings together technology, science and ecology to explore the way this latter-day ark was invoked by politicians, environmentalists, cultural historians, writers of science fiction and many others across three decades.

In Spite of the Dark Silence Jorge Volpi Escalante.2010 *In Spite of the Dark Silence*, presents a biographical perspective on the tragic life of the poet and chemist Jorge Cuesta. Cuesta was one of the founders of *Los Contemporáneos*, an influential twentieth-century literary movement. The poetic voice of Cuesta's verses can be heard throughout, offering insights into the creative and destructive forces and impulses in his work that eventually led to a mental ward and a shocking suicide at thirty-eight.

Essays Toward a Steady-state Economy Herman E. Daly.1971

Arming the Luftwaffe Daniel Uziel.2011-11-16 During World War II, aviation was among the largest industrial branches of the Third Reich. About 40 percent of total German war production, and two million people, were involved in the manufacture of aircraft and air force equipment. Based on

German records, Allied intelligence reports, and eyewitness accounts, this study explores the military, political, scientific and social aspects of Germany's wartime aviation industry: production, research and development, Allied attacks, foreign workers and slave labor, and daily life and working conditions in the factories. Testimony from Holocaust survivors who worked in the factories provides a compelling new perspective on the history of the Third Reich.

Wonderful Balloon Ascents Camille Flammarion.2022-09-15 Wonderful Balloon Ascents is a historical novel looking back at the historical voyages made possible by balloon travel. Author Camille Flammarion states that, The discovery or the invention of the balloon was one of those efforts of genius and enterprise which have no infancy. It had reached its full growth when it burst upon the world, and the ninety (at the time of the book's writing) years which have since elapsed have witnessed no development of the original idea. The balloon of to-day—the balloon in which Coxwell and Glaisher have made their perilous trips into the remote regions of the air—is in almost every respect the same as the balloon with which the physician Charles, following in the footsteps of the Montgolfiers, astonished Paris in 1783. There are few more tantalising stories in the annals of invention than this.

The Plans That Failed André Steiner.2013-08-01 The establishment of the Communist social model in one part of Germany was a result of international postwar developments, of the Cold War waged by East and West, and of the resultant partition of Germany. As the author argues, the GDR's 'new' society was deliberately conceived as a counter-model to the liberal and marketregulated system. Although the hopes connected with this alternative system turned out to be misplaced and the planned economy may be thoroughly discredited today, it is important to understand the context in which it developed and failed. This study, a bestseller in its German version, offers an in-depth exploration of the GDR economy's starting conditions and the obstacles to growth it confronted during the consolidation phase. These factors, however, were not decisive in the GDR's lack of growth compared to that of the Federal Republic. As this study convincingly shows, it was the economic model that led to failure.
