

Echoes Of The Ancient Skies

Skywatchers, Shamans & Kings E. C. Krupp.1997 Discover the celestial myths and cosmic rituals of ancient priests and kings . . . Drawing on intimate knowledge of the more than 1,300 ancient sites he has visited, E. C. Krupp, acclaimed writer and preeminent researcher, takes you to the world's essential sacred places and celestial shrines. Join him on a rich narrative journey to see where the rulers of old communed with the gods of the sky. Highly recommended to everyone interested in the culture of astronomy and those peoples who practiced it in their own ways.-Sky & Telescope A lively account of the ways in which our ancestors conceived of and used the heavens.-New Scientist There can be no doubt that this imaginative and readable work by a widely read and widely traveled author will strike a chord in the minds of a great many modern readers.-Isis The fact that the book is written by an expert in his field comes through on every page, as does his enthusiasm for the subject.-Astronomy Now Krupp's indispensable volume is fascinating, well-illustrated, and covers much territory.-Parabola

Exploring Ancient Skies David H. Kelley,Eugene F. Milone.2011-02-16 Exploring Ancient Skies brings together the methods of archaeology and the insights of modern astronomy to explore the science of astronomy as it was practiced in various cultures prior to the invention of the telescope. The book reviews an enormous and growing body of literature on the cultures of the ancient Mediterranean, the Far East, and the New World (particularly Mesoamerica), putting the ancient astronomical materials into their archaeological and cultural contexts. The authors begin with an overview of the field and proceed to essential aspects of naked-eye astronomy, followed by an examination of specific cultures. The book concludes by taking into account the purposes of ancient astronomy: astrology, navigation, calendar regulation, and (not least) the understanding of our place and role in the universe. Skies are recreated to display critical events as they would have appeared to ancient observers--events such as the supernova of 1054 A.D., the lion horoscope, and the Star of Bethlehem. Exploring Ancient Skies provides a comprehensive overview of the relationships between astronomy and other areas of human investigation. It will be useful as a reference for scholars and as a text for students in both astronomy and archaeology, and will be of compelling interest to readers who seek a broad understanding of our collective intellectual history.

Sticks, Stones, and Shadows Martin Isler.2001 What do the pyramids of Egypt really represent? What could have driven so many to so great, and often so dangerous, an effort? Was the motivation religious or practical? Illustrated with more than 300 photographs and drawings, this book presents an original approach to the subject of pyramid building. It reveals the connection between devices that served both a practical need for survival and a spiritual belief in gods and goddesses. It examines Egyptian technologies and techniques from the origins of pyramid development to the step-by-step details of how the ground was leveled, how the site was oriented, and how the stone was raised and placed to meet at a distant point in the sky. Here the author also asks and answers questions virtually ignored for the last century. He discloses, for example, the ancient use of shadows, now denigrated to the ornamental back-yard sundial, but once an important tool for telling the height of an object, geographical directions, the seasons of the year, and the time of day. He also reinterprets the ancient stretching of the cord ceremony, which once was thought to have only religious significance but here is shown as the means of establishing the sides of a pyramid.

Echoes of the Ancient Skies E. C. Krupp.2012-03-15 Popular, authoritative look at the world of archaeoastronomy, the study of ancient peoples' observation of the skies and its role in their cultural evolution. 208 illustrations.

Decoding Astronomy in Art and Architecture Marion Dolan.2021-09-17 For centuries, our ancestors carefully observed the movements of the heavens and wove that astronomical knowledge into their city planning, architecture, mythology, paintings, sculpture, and poetry. This book uncovers the hidden messages and advanced science encoded within these sacred spaces, showing how the rhythmic motions of the night sky played a central role across many different cultures. Our astronomical tour transports readers through time and space, from prehistoric megaliths to Renaissance paintings, Greco-Roman temples to Inca architecture. Along the way, you will investigate unexpected findings at Lascaux, Delphi, Petra, Angkor Wat, Borobudur, and many more archaeological sites both famous and little known. Through these vivid examples, you will come to appreciate the masterful ways that astronomical knowledge was incorporated into each society's religion and mythology, then translated into their physical surroundings. The latest archaeoastronomical studies and discoveries are recounted through a poetic and nontechnical narrative, revealing how many longstanding beliefs about our ancestors are being overturned. Through this celestial journey, readers of all backgrounds will learn the basics about this exciting field and share in the wonders of cultural astronomy.

When They Severed Earth from Sky Elizabeth Wayland Barber,Paul T. Barber.2012-01-02 Why were Prometheus and Loki envisioned as chained to rocks? What was the Golden Calf? Why are mirrors believed to carry bad luck? How could anyone think that mortals like Perseus, Beowulf, and St. George actually fought dragons, since dragons don't exist? Strange though they sound, however, these myths did not begin as fiction. This absorbing book shows that myths originally transmitted real information about real events and observations, preserving the information sometimes for millennia within nonliterate societies. Geologists' interpretations of how a volcanic cataclysm long ago created Oregon's Crater Lake, for example, is echoed point for point in the local myth of its origin. The Klamath tribe saw it happen and passed down the story--for nearly 8,000 years. We, however, have been literate so long that we've forgotten how myths encode reality. Recent studies of how our brains work, applied to a wide range of data from the Pacific Northwest to ancient Egypt to modern stories reported in newspapers, have helped the Barbers deduce the characteristic principles by which such tales both develop and degrade through time. Myth is in fact a quite reasonable way to convey important messages orally over many generations--although reasoning back to the original events is possible only under rather specific conditions. Our oldest written records date to 5,200 years ago, but we have been speaking and mythmaking for perhaps 100,000. This groundbreaking book points the way to restoring some of that lost history and teaching us about human storytelling.

Origins of the Sphinx Robert M. Schoch,Robert Bauval.2017-03-16 New research and evidence that the Sphinx is thousands of years older than previously thought • Contrasts what Egyptologists claim about the Sphinx with historical accounts and new research including reanalysis of seismic studies and updates to Schoch's water weathering research and Bauval's Orion Correlation Theory • Examines how the Sphinx is contemporaneous with Göbekli Tepe, aligned with the constellation Leo, and was recarved during the Old Kingdom era of Egypt • Reveals that the Sphinx was built during the actual historical Golden Age of ancient Egypt, the period known in legend as Zep Tepi No other monument in the world evokes mystery like the Great Sphinx of Giza. It has survived the harsh climate of Egypt for thousands of years and will remain long after our own civilization is gone. According to orthodox Egyptology, the Sphinx was built around 2500 BCE as a memorial to the pharaoh Khafre. Yet this "fact" has scant to no supportive evidence. When was the Sphinx really built and, most importantly, why? In this provocative collaboration from two Egyptology outsiders, Robert M. Schoch, Ph.D., and Robert Bauval combine their decades of research to show how the Sphinx is thousands of years older than the conventional Egyptological timeline and was built by a long forgotten pre-Pharaonic civilization. They examine the known history of the Sphinx, contrasting what Egyptologists claim with prominent historical accounts and new research, including updates to Schoch's geological water weathering research and reanalysis of seismic studies. Building on Bauval's Orion Correlation Theory, they investigate the archaeoastronomical alignments of the monuments of the Giza Plateau and reveal how the pyramids and Sphinx were built to align with the constellations of Orion and Leo. Analyzing the evidence for a significantly older construction phase at Giza and the restoration and recarving of the Sphinx during the Old Kingdom era, they assert that the Sphinx was first built by an advanced pre-Pharaonic civilization that existed circa 12,000 years ago on the Giza Plateau, contemporaneous with the sophisticated Göbekli Tepe complex. The authors examine how the monuments at Giza memorialize Zep Tepi, the Golden Age of legend shown here

to be an actual historical time period from roughly 10,500 BCE through 9700 BCE. Moving us closer to an understanding of the true age and purpose of the Great Sphinx, Schoch and Bauval provide evidence of an early high civilization witnessed by the Great Sphinx before the end of the last ice age.

A History of Astronomy from Thales to Kepler J. L. E. Dreyer.1953-01-01 Masterpiece of historical insight and scientific accuracy and the definitive work on Greek astronomy and the Copernican Revolution.

Includes surveys of European and Islamic cosmologies of the Middle Ages and the Renaissance.

Phaethon .2017-07-01 Phaethon offers a comparative study of the Phaethon myth.

Under Ancient Skies Paul Dunbavin.2005-01-01 In all of the world's myths and religions we find traditions of a Great Flood. There are stories too of a Golden Age: the antediluvian paradise that it destroyed. Might these be real memories of the ancient world? And how can we analyze the subject scientifically? The key to unlock these ancient myths lies in astronomy. Under Ancient Skies will examine the astronomical evidence for a prehistoric cataclysm and in the process will explore a number of related anomalies in prehistory, including: • Was there a single great flood in human prehistory, or have there been many? • Could the workings of ancient calendars and the records of ancient eclipses give us clues about the Flood and the antediluvian world? • Did the Celtic Druids use a calendar based on the orbit of Saturn; and is this the same antediluvian calendar that is described in Plato's myth of Atlantis? • Do Hindu, Chinese and Mayan cosmology myths recall the years after the Flood when our world wobbled on its axis? • Did these same events trigger the building of astronomically aligned monuments such as Stonehenge and the pyramids? • Was the Atenist religion of the heretic Egyptian Pharaoh Akhenaten inspired by a series of eclipses during his lifetime? • Do the seven good years and the seven bad years of the Joseph story recall a time when a comet struck the Earth? • Did the British Druids use astronomy to calculate the size of the Earth; and could they have used this knowledge to navigate to America? • Why were the ancient Celts so afraid that the sky would one day fall on their heads? • Are comets and asteroids the only danger lurking in the cosmos - or could there be other dangers as yet unknown to science? In 1994 we watched as a comet struck the giant planet Jupiter. Geologists have recently discovered the crater in Yucatan, where an asteroid impact destroyed the world of the dinosaurs. Scientists and astronomers have stopped dismissing the theory that asteroids and comets could have struck the Earth during prehistory - but any suggestion that a comet impact just a few thousand years ago might have caused the Biblical Flood, remains the last taboo. It is time for this prejudice too, to be washed away. The reader is promised 'a real book: a fully referenced textbook with original content in every chapter and a bibliography of over 300 sources, If you have read Paul Dunbavin's other books then you will know what to expect. First published in 2005 and for a long time out of print, this new edition will make the author's unique research available again to anyone who is interested in mythology, astronomy and ancient mysteries. Now also available in Kindle hard and soft editions.

The Marvelous Clouds John Durham Peters.2016-08-15 Peters defines media expansively as elements that compose the human world. Drawing from ideas implicit in media philosophy, Peters argues that media are more than carriers of messages: they are the very infrastructures combining nature and culture that allow human life to thrive. Through an encyclopedic array of examples from the oceans to the skies, *The Marvelous Clouds* reveals the long prehistory of so-called new media. Digital media, Peters argues, are an extension of early practices tied to the establishment of civilization such as mastering fire, building calendars, reading the stars, creating language, and establishing religions. New media do not take us into uncharted waters, but rather confront us with the deepest and oldest questions of society and ecology: how to manage the relations people have with themselves, others, and the natural world.

Cahokia, the Great Native American Metropolis Biloine W. Young, Melvin Leo Fowler.2000 Five centuries before the Pilgrims landed in Massachusetts, indigenous North Americans had already built a vast urban center on the banks of the Mississippi River where East St. Louis is today. This is the story of North America's largest archaeological site, told through the lives, personalities, and conflicts of the men and women who excavated and studied it. At its height the metropolis of Cahokia had twenty thousand inhabitants in the city center with another ten thousand in the outskirts. Cahokia was a precisely planned community with a fortified central city and surrounding suburbs. Its entire plan reflected the Cahokian's concept of the cosmos. Its centerpiece, Monk's Mound, ten stories tall, is the largest pre-Columbian structure in North America, with a base circumference larger than that of either the Great Pyramid of Khufu in Egypt or the Pyramid of the Sun at Teotihuacan in Mexico. Nineteenth-century observers maintained that the mounds, too sophisticated for primitive Native American cultures, had to have been created by a superior, non-Indian race, perhaps even by survivors of the lost continent of Atlantis. Melvin Fowler, the dean of Cahokia archaeologists, and Biloine Whiting Young tell an engrossing story of the struggle to protect the site from the encroachment of interstate highways and urban sprawl. Now identified as a World Heritage Site by UNESCO and protected by the Illinois Historic Preservation Agency, Cahokia serves as a reminder that the indigenous North Americans had a past of complexity and great achievement.

Megaliths, Myths and Men Peter Lancaster Brown.2013-01-23 Fascinating study of early astronomical knowledge through the interpretation of such ancient monuments as Stonehenge, Carnac, other megalithic sites. Over 140 photos, maps, illustrations. Fascinating.— Publishers Weekly.

The Power of Stars Bryan E. Penprase.2017-05-05 Completely revised and updated, this new edition provides a readable, beautifully illustrated journey through world cultures and the vibrant array of sky mythology, creation stories, models of the universe, temples and skyscrapers that each culture has created to celebrate and respond to the power of the night sky. Sections on the archaeoastronomy of South Asia and South East Asia have been expanded, with original photography and new research on temple alignments in Southern India, and new material describing the astronomical practices of Indonesia, Malaysia and other Southeast Asian countries. Beautiful photographs of temples in India and Asia have been added, as well as new diagrams explaining the alignment of these structures and the astronomical underpinnings of temples within the Pallava and Chola cultures. From new fieldwork in the Four Corners region of North America, Dr. Penprase has included accounts of Pueblo skywatching and photographs of ceremonial kivas that help elucidate the rich astronomical knowledge of the Pueblo people. The popular "Archaeoastronomy of Skyscrapers" section of the book has been updated as well, with new interpretations of skyscrapers in Indonesia, Taiwan and China. With the rapid pace of discovery in astronomy and astrophysics, entirely new perspectives are emerging about dark matter, inflation and the future of the universe. *The Power of Stars* puts these discoveries in context and describes how they fit into the modern perspective of cosmology, which has arisen from the universal human response to the sky that has inspired both ancient and modern cultures.

Notes of a Potato Watcher James Lang.2001 Native to the New World, the potato was domesticated by Andean farmers, probably in the Lake Titicaca basin, almost as early as grain crops were cultivated in the Near East. Full of essential vitamins and energy-giving starch, the potato has proved a valuable world resource. Curious Spaniards took the potato back to Europe, from whence it spread worldwide. Today, the largest potato producer is China, with India not far behind. To tell the potato's story, Lang has done fieldwork in South America, Asia, and Africa.--Jacket.

James Turrell Craig Adcock.2023-12-22 This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived makes high-quality, peer-reviewed scholarship accessible once again using print-on-demand technology. This title was originally published in 1990. This title is part of UC Press's Voices Revived program, which commemorates University of California Press's mission to seek out and cultivate the brightest minds and give them voice, reach, and impact. Drawing on a backlist dating to 1893, Voices Revived

A People's History of Science Clifford D Conner.2009-04-24 We all know the history of science that we learned from grade school textbooks: How Galileo used his telescope to show that the earth was not the center of the universe; how Newton divined gravity from the falling apple; how Einstein unlocked the mysteries of time and space with a simple equation. This history is made up of long periods of ignorance and confusion, punctuated once an age by a brilliant thinker who puts it all together. These few tower over the ordinary mass of people, and in the traditional account, it is to them that we owe science in its entirety. This belief is

wrong. A People's History of Science shows how ordinary people participate in creating science and have done so throughout history. It documents how the development of science has affected ordinary people, and how ordinary people perceived that development. It would be wrong to claim that the formulation of quantum theory or the structure of DNA can be credited directly to artisans or peasants, but if modern science is likened to a skyscraper, then those twentieth-century triumphs are the sophisticated filigrees at its pinnacle that are supported by the massive foundation created by the rest of us.

Mysteries and Discoveries of Archaeoastronomy Giulio Magli.2009-04-09 The book is divided into two parts. In the first, the reader is taken on an ideal 'world tour' of many wonderful and enigmatic places in almost every continent, in search of traces of astronomical knowledge and lore of the sky. In the second part, Giulio Magli uses the elements presented in the tour to show that the fundamental idea which led to the construction of the astronomically-related giant monuments was the foundation of power, a foundation which was exploited by 'replicating' the sky. A possible interpretive model then emerges that is founded on the relationship the ancients had with "nature", in the sense of everything that surrounded them, the cosmos. The numerous monumental astronomically aligned structures of the past then become interpretable as acts of will, expressions of power on the part of those who held it; the will to replicate the heavenly plane here on earth and to build sacred landscapes. Finally, having formulated his hypothesis, Professor Magli returns to visit one specific place in detail, searching for proof. This in-depth examination studies the most compelling, the most intensively studied, the most famous and, until recently, the most misunderstood sacred landscape on the planet - Giza, in Egypt. The archaeoastronomical analysis of the orientation of the Giza pyramids leads to the hypothesis that the pyramids of Cheops and Chephren belong to the same construction project.

In Search of Ancient Astronomies Edwin C. Krupp.1979

Early New World Monumentality Richard L. Burger,Robert M. Rosenswig.2012-05-20 In studies of ancient civilizations, the focus is often on the temples, palaces, and buildings created and then left behind, both because they survive and because of the awe they still inspire today. From the Mississippian mounds in the United States to the early pyramids of Peru, these monuments have been well-documented, but less attention has been paid to analyzing the logistical complexity involved in their creation. In this collection, prominent archaeologists explore the sophisticated political and logistical organizations that were required to plan and complete these architectural marvels. They discuss the long-term political, social, and military impacts these projects had on their respective civilizations, and illuminate the significance of monumentality among early complex societies in the Americas. Early New World Monumentality is ultimately a study of labor and its mobilization, as well as the long-term spiritual awe and political organization that motivated and were enhanced by such undertakings. Mounds and other impressive monuments left behind by earlier civilizations continue to reveal their secrets, offering profound insights into the development of complex societies throughout the New World.

Echoes of the Ancient Skies Edwin C. Krupp.2004-04 Popular, authoritative look at the world of archaeoastronomy, the study of ancient peoples' observation of the skies and its role in their cultural evolution. 208 illustrations.

Dark Sky Legacy George Reed.2010-12-30 The way mankind has responded to the dark sky throughout history has determined humanity's scientific - and cultural - progress. In this way, astronomy is in some way connected to everything. This fascinating theme is explored in Dark Sky Legacy. George Reed examines the powerful influence of the cosmos on cultural and societal development, reviewing mankind's historical propensity for projecting human experience into a cosmic framework and the centuries-old relationship between astronomy and astrology, the result of which is the emergence of the age of science. Since then, he writes, the purpose of astronomy has been to observe celestial objects for the advancement of scientific knowledge, while astrology deals only in the possibility that celestial bodies influence events on Earth. Reed asserts that the movement away from an inward-looking, meaningful cosmos toward an outward-gazing, impersonal one is a shift that has had enormous repercussions in every aspect of human life. He points out that astrology provides a scheme in which the believer is an integral component of an animistic, cyclical universe. Conversely, the pursuit of science and astronomy is a mechanistic, linear activity, which seeks extrinsic answers in terms of precise relationships between sense perceptions. Dark Sky Legacy probes the divergent approaches to the universe that compel individuals and cultures to pursue astrology or astronomy, the intuitive or the analytical. Blending modern science, ancient science, mythology, history, literature, and naked-eye astronomy, and spiced with fascinating detail about astronomy, astrology, celestial mythology, and calendar development, the book is an engrossing study of the profound impact of mankind's relationship with the universe.

The Power of Stars Bryan E. Penprase.2010-10-17 What are some of the connections that bind us to the stars? How have these connections been established? And how have people all around the world and throughout time reacted to the night sky, the sun and moon, in their poetry, mythology, rituals, and temples? This book explores the influence of the sky on both ancient and modern civilization, by providing a clear overview of the many ways in which humans have used the stars as an ordering principle in their cultures, and which today still inspire us intellectually, emotionally, and spiritually. The book explores constellation lore from around the world, celestial alignments of monuments and temples, both from ancient and modern civilizations, and the role the sky has played in the cultures of the Greek, Egyptian, Babylonian, Native American, Chinese, Mayan, Aztec, and Inca. Models of the universe from each of these cultures are described clearly, and each culture's explanation of the stars, planets, and other celestial objects are described. The roots of astronomy and astrology are presented with original imagery and reproductions of ancient manuscripts that portray the structure of the physical universe as conceived by a diverse array of human cultures over the centuries. Our own scientific Big Bang cosmology and the origin of stars and elements are discussed in a philosophical context, to explore how we as modern people learn about the Universe, and incorporate the findings of science into our world views. A concluding chapter provides a summary of modern science's effort to unlock the celestial secrets from the sky and from past civilizations, and what these answers mean for us today.

Echoes of an Alien Sky James P. Hogan.2008 But there is a different, unexpected answer to the riddle. Lorili and Kyal will have to fight for their theory - and their lives.--BOOK JACKET.

Astronomy of the Inca Empire Steven R. Gullberg.2020-08-06 Astronomy in the Inca Empire was a robust and fundamental practice. The subsequent Spanish conquest of the Andes region disrupted much of this indigenous culture and resulted in a significant loss of information about its rich history. Through modern archaeoastronomy, this book helps recover and interpret some of these elements of Inca civilization. Astronomy was intricately woven into the very fabric of Andean existence and daily life. Accordingly, the text takes a holistic approach to its research, considering first and foremost the cultural context of each astronomy-related site. The chapters necessarily start with a history of the Incas from the beginning of their empire through the completion of the conquest by Spain before diving into an astronomical and cultural analysis of many of the huacas found in the heart of the Inca Empire. Over 300 color images—original artwork and many photos captured during the author's extensive field research in Machu Picchu, the Sacred Valley, Cusco, and elsewhere—are included throughout the book, adding visual insight to a rigorous examination of Inca astronomical sites and history.

Encyclopedia of American Indian Contributions to the World Emory Dean Keoke,Kay Marie Porterfield.2009 Describes the lives and achievements of American Indians and discusses their contributions to the world.

Ancient Skies: Constellation Mythology of the Greeks David Weston Marshall.2018-08-07 Look to the sky and see the stories in the stars The stars and constellations are among the few remaining objects that appear to us just as they appeared to our distant ancestors. From anywhere on Earth, a person may view the celestial panorama simply by stepping outside at night and gazing upward. This non-fiction narrative presents the tales of the forty-eight classical constellations, compiled from literature spanning a thousand years from Homer (c. 800 BC) to Claudius Ptolemy (c. 150 AD). These age-old tales have captured the human imagination from ancient times to the present, and through them we can examine the early practical astronomy, philosophical speculation on the cosmos, and fundamental moral beliefs of much of Western civilization. Illustrations and star charts carefully reconstructed from ancient sources lend a visual element and immerse the reader in the world of ancient cosmology and constellation mapping. Through Marshall's research and

storytelling, *Ancient Skies* brings the belief systems of the classical world to shining life.

Sky People Ardy Sixkiller Clarke.2014-12-22 Dr. Ardy Sixkiller Clarke, author of *Encounters With Star People*, vowed as a teenager to follow in the footsteps of two 19th-century explorers, John L. Stephens and Frederick Catherwood, who brought the ancient Maya cities to the world's attention. Dr. Clarke set out on a seven-year adventure (from 2003 through 2010) through Belize, Honduras, Guatemala, and Mexico, collecting stories of encounters, sky gods, giants, little people, and aliens among the indigenous people. She drove more than 12,000 miles, visiting 89 archaeological sites (Stephens and Catherwood visited only 44) and conducting nearly 100 individual interviews. The result is an enthralling series of unique, original, true stories of encounters with space travelers, giants, little people, and UFOs. *Sky People* may very well change the way you perceive and experience the world.

The History and Practice of Ancient Astronomy James Evans.1998-10-01 *The History and Practice of Ancient Astronomy* combines new scholarship with hands-on science to bring readers into direct contact with the work of ancient astronomers. While tracing ideas from ancient Babylon to sixteenth-century Europe, the book places its greatest emphasis on the Greek period, when astronomers developed the geometric and philosophical ideas that have determined the subsequent character of Western astronomy. The author approaches this history through the concrete details of ancient astronomical practice. Carefully organized and generously illustrated, the book can teach readers how to do real astronomy using the methods of ancient astronomers. For example, readers will learn to predict the next retrograde motion of Jupiter using either the arithmetical methods of the Babylonians or the geometric methods of Ptolemy. They will learn how to use an astrolabe and how to design sundials using Greek and Roman techniques. The book also contains supplementary exercises and patterns for making some working astronomical instruments, including an astrolabe and an equatorium. More than a presentation of astronomical methods, the book provides a critical look at the evidence used to reconstruct ancient astronomy. It includes extensive excerpts from ancient texts, meticulous documentation, and lively discussions of the role of astronomy in the various cultures. Accessible to a wide audience, this book will appeal to anyone interested in how our understanding of our place in the universe has changed and developed, from ancient times through the Renaissance.

Ancient Astronomy and Celestial Divination Noel M. Swerdlow.1999 This volume presents recent work on Babylonian celestial divination and on the Greek inheritors of the Babylonian tradition. In the ancient world, the collection and study of celestial phenomena and the interpretation of their prophetic significance, especially as applied to kings and nations, were closely related sciences carried out by the same scholars. Both ancient sources and modern research agree that astronomy and celestial divination arose in Babylon. Only in the late nineteenth century, however, did scholars begin to identify and decipher the original Babylonian sources, and the process of understanding those sources has been long and difficult. This volume presents recent work on Babylonian celestial divination and on the Greek inheritors of the Babylonian tradition. Both philological and mathematical work are included. The essays shed new light on all of the known textual sources, including the omen series *Enuma Anu Enlil*, which contains omens from as far back as the early second or even third millennium, and the earliest personal horoscopes, from about 400 B.C., as well as the *Astronomical Diaries*, ephemerides, and other observational and mathematical texts. One essay concerns astronomical papyri that confirm the extensive transmission of Babylonian methods into Greek; a study of Ptolemy's lunar theory suggests that Ptolemy relied more on his own observations than previously thought; and an analysis of Theon's commentary on Ptolemy's *Handy Tables* shows that Theon explicated their meaning both conscientiously and competently. Contributors Asger Aaboe, Alan C. Bowen, Lis Brack-Bernsen, John P. Britton, Bernard R. Goldstein, Gerd Graßhoff, Hermann Hunger, Alexander Jones, Erica Reiner, F. Rochberg, N. M. Swerdlow, Anne Tihon, C. B. F. Walker

Lost Discoveries Dick Teresi.2010-05-11 *A New York Times Notable Book* Boldly challenging conventional wisdom, acclaimed science writer and *Omni* magazine cofounder Dick Teresi traces the origins of contemporary science back to their ancient roots in this eye-opening and landmark work. This innovative history proves once and for all that the roots of modern science were established centuries, and in some instances millennia, before the births of Copernicus, Galileo, and Newton. In this enlightening, entertaining, and important book, Teresi describes many discoveries from all over the non-Western world—Sumeria, Babylon, Egypt, India, China, Africa, Arab nations, the Americas, and the Pacific islands—that equaled and often surpassed Greek and European learning in the fields of mathematics, astronomy, cosmology, physics, geology, chemistry, and technology. The first extensive and authoritative multicultural history of science written for a popular audience, *Lost Discoveries* fills a critical void in our scientific, cultural, and intellectual history and is destined to become a classic in its field.

Ancient Sky Watchers & Mythic Themes: A Sky Lore Anthology: Volume One Julie Loar.2020-04-11 An anthology of articles on ancient astronomy, sky lore mythology, ancient zodiacs, star lore, and modern space discoveries. These articles were previously published in *Atlantis Rising* magazine and are assembled here for the first time. This is the first of two volumes.

Skyscapes Fabio Silva, Nicholas Campion.2015-03-12 Eleven papers extend discussion of the role and importance of the landscape and the wider environment to past societies, and to the understanding and interpretation of their material remains, into consideration of the significance of the celestial environment: the skyscape. The role of the sky for past societies has been relegated to the fringes of archaeological discourse. Nevertheless archaeoastronomy has developed a new rigour in the last few decades and the evidence suggests that it can provide insights into the beliefs, practices and cosmologies of past societies. *Skyscapes* explores the current role of archaeoastronomical knowledge in archaeological discourse and how to integrate the two. It shows how it is not only possible but even desirable to look at the skyscape to shed further light on human societies. This is achieved by first exploring the historical relationship between archaeoastronomy and academia in general, and with archaeology in particular. The volume continues by presenting case-studies that either demonstrate how archaeoastronomical methodologies can add to our current understanding of past societies, their structures and beliefs, or how integrated approaches can raise new questions and even revolutionise current views of the past.

Beyond the Blue Horizon Edwin C. Krupp.1992 Dr. Edwin C. Krupp in his latest book, *Beyond the Blue Horizon*, examines the myths and legends of the sun, moon, planets, and stars. He addresses questions such as: What is the moon's role in lunacy?; How is a match made in heaven?; and Is Santa Claus a modern shaman? More than 200 black-and-white photos.

At the Crossroads of the Earth and the Sky Gary Urton.2013-12-18 Above Misminay, the sky also is so divided by the alternation of the two axes of the Milky Way passing through the zenith. This mirror-image quadripartition of terrestrial and celestial spheres is such that a point within one of the quarters of the earth is related to a point within the corresponding celestial quarter. The transition between the earth and the sky occurs at the horizon, where sacred mountains are related to topographic and celestial features. Based on fieldwork in Misminay, Peru, Gary Urton details a cosmology in which the Milky Way is central. This is the first study that provides a description and analysis of the astronomical and cosmological system in a contemporary community in the Americas. Separate chapters take up the sun, the moon, meteorological phenomena, the stars, and the planets. Star-to-star constellations, the animal dark-cloud constellations that cut through the Milky Way, and certain twilight- and midnight-zenith stars are analyzed in terms of their spatial and temporal integration within an indigenous cosmological framework. Urton breaks new ground by demonstrating the indigenous merging of such forms of precise knowledge as astronomy, meteorology, agriculture, and the correlation of astronomical and biological cycles within a single calendar system. More than sixty diagrams clarify this Quechua system of astronomy and relate it to more familiar principles of Western astronomy and cosmology.

A History of Astronomy Anton Pannekoek.1989-01-01 Well-balanced, carefully reasoned study covers such topics as Ptolemaic theory, work of Copernicus, Kepler, Newton, Eddington's work on stars, much more. Illustrated. References.

The Dawn of Astronomy J. Norman Lockyer.2006-04-28 A pioneer in the fields of astrophysics and astro-archeology, J. Norman Lockyer believed that ancient Egyptian monuments were constructed in strict relation to

the stars. In this celebrated study, he explores the relationship between astronomy and architecture in the age of the pharaohs. Lockyer addresses one of the many points already extensively investigated by Egyptologists: the chronology of the kings of Egypt. All experts are in accord regarding the identity of the first monarch, but they cannot agree upon the dates of his reign within a thousand years. The author contends that by applying a knowledge of astronomy to the actual site orientation of the region's pyramids and temples, accurate dating can be achieved. In order to accomplish this, Lockyer had to determine the level of the ancient Egyptian ideas of astronomy. Some of his inferences have been invalidated by subsequent scholarship, but many of his other conclusions stand firm and continue to provide sensational leads into contemporary understanding of archaic astronomy.

Living the Sky Ray A. Williamson.1987 Imagine the North American Indians as astronomers carefully watching the heavens, charting the sun through the seasons, or counting the sunrises between successive lunar phases. Then imagine them establishing observational sites and codified systems to pass their knowledge down through the centuries and continually refine it. A few years ago such images would have been abruptly dismissed. Today we are wiser. *Living the Sky* describes the exciting archaeoastronomical discoveries in the United States in recent decades. Using history, science, and direct observation, Ray A. Williamson transports the reader into the sky world of the Indians. We visit the Bighorn Medicine Wheel, sit with a Zuni sun priest on the winter solstice, join explorers at the rites of the Hopis and the Navajos, and trek to Chaco Canyon to make direct on-site observations of celestial events.

Ancient Astronomy Clive L.N. Ruggles.2005-10-21 An authoritative introduction to the fascinating topic of archaeoastronomy—ancient peoples' understanding and use of the skies. *Ancient Astronomy: An Encyclopedia of Cosmologies and Myth* draws on archaeological evidence and oral traditions to reveal how prehistoric humans perceived the skies and celestial phenomena. With over 200 entries, it offers a number of ways to approach ancient astronomy, from key examples and case studies worldwide (Stonehenge; Mexican and Egyptian pyramids; Chaco Canyon, New Mexico; the Nazca lines in Peru) to general themes (cosmologies, calendars, ancient ideas of space and time, origin myths), to fundamental concepts and methods (how the sky has changed over the centuries, how to survey a site), and to the field's most frequently asked questions (How did ancient peoples navigate the ocean using the stars? How does astrology relate to ancient astronomy? Can ancient sites be dated astronomically?) By revealing the astronomical significance of some of the world's most famous ancient landmarks and enduring myths and by showing how different themes and concepts are connected, *Ancient Astronomy: An Encyclopedia of Cosmologies and Myth* brings a unique authoritative perspective to an area too often left to speculation and sensationalism.

Water Beings Veronica Strang.2023-04-19 Looking to the vast human history of water worship, a crucial study of our broken relationship with all things aquatic—and how we might mend it. Early human relationships with water were expressed through beliefs in serpentine aquatic deities: rainbow-colored, feathered or horned serpents, giant anacondas, and dragons. Representing the powers of water, these beings were bringers of life and sustenance, world creators, ancestors, guardian spirits, and lawmakers. Worshipped and appeased, they embodied people's respect for water and its vital role in sustaining all living things. Yet today, though we still recognize that “water is life,” fresh- and saltwater ecosystems have been critically compromised by human activities. This major study of water beings and what has happened to them in different cultural and historical contexts demonstrates how and why some—but not all—societies have moved from worshipping water to wreaking havoc upon it and asks what we can do to turn the tide.

Reviewing **Echoes Of The Ancient Skies**: Unlocking the Spellbinding Force of Linguistics

In a fast-paced world fueled by information and interconnectivity, the spellbinding force of linguistics has acquired newfound prominence. Its capacity to evoke emotions, stimulate contemplation, and stimulate metamorphosis is truly astonishing.
