Die Fakultät für Elektrotechnik und Informationstechnik / The Faculty of Electrical Engineering and Information Technology Karl Unterrainer.2016-01-20 An autonomous faculty of the TU Wien for only forty years, Electrical Engineering and Information Technology are nevertheless among the most important foundations of technical development since the 19th century. Areas of research are numerous and broad - starting with the "classics" like Energy Technologies and Telecommunications, research turned to the fields of System and Automation Technologies, Micro- and Nanoelectronics, and Photonics, all highly complex disciplines that have established themselves as essential to modern society.

Effective Scientific Writing Aleth Bolt,Walter Bruins.2012 Writing a scientific article in English is often a major challenge for non-native speakers of the language. They not only need to produce a well-structured and coherent text, but they are also expected to use correct and idiomatic English throughout. While many books and guides deal with academic writing in general, few focus specifically on writing a scientific article, and most are not written with non-native speakers of English in mind. This guide now offers help. It provides comprehensive and practical advice for non-English graduate students (Master's and PhD) and researchers from various disciplines who wish to communicate their work effectively. It presents all the essential elements for writing a successful scientific paper: (1) getting started and structuring your thoughts; (2) structuring your paper; (3) citing sources; (4) writing well-structured and coherent paragraphs; (5) constructing effective sentences; (6) considering information placement and word order; (7) adopting the right style and using appropriate vocabulary; (8) avoiding the pitfalls of English grammar; (9) using correct spelling and punctuation. This guide is the culmination of Taalcentrum-VU's years of experience in providing clear language and communication consulting in combination with practical tools to aid the aspiring writer of scientific English.

Technology Innovation in Underground Construction Gernot Beer.2009-10-16 This richly-illustrated reference guide presents innovative techniques focused on reducing time, cost and risk in the construction and maintenance of underground facilities: A primary focus of the technological development in underground engineering is to ease the practical execution and to reduce time, cost and risk in the construction and maintenance of underground facilities such as tunnels and caverns. This can be realized by new design tools for designers, by instant data access for engineers, by virtual prototyping and training for manufacturers, and by robotic devices for maintenance and repair for operators and many more advances. This volume presents the latest technological innovations in underground design, construction, and operation, and comprehensively discusses developments in ground improvement, simulation, process integration, safety, monitoring, environmental impact, equipment, boring and cutting, personnel training, materials, robotics and more. These new features are the result of a big research project on underground engineering, which has involved many players in the discipline. Written in an accessible style and with a focus on applied engineering, this book is aimed at a readership of engineers, consultants, contractors, operators, researchers, manufacturers, suppliers and clients in the underground engineering business. It may moreover be used as educational material for advanced courses in tunnelling and underground construction.
