The Silence of Goethe Josef Pieper.2009 During the last months of the war, Josef Pieper saw the realization of a long-cherished plan to escape from the lethal chaos that was the Germany of that time, plucked, he writes, as was Habakkuk, by the hair of his head . . . to be planted into a realm of the most peaceful seclusion, whose borders and exists were, of course, controlled by armed sentries. There he made contact with a friend close-by, who possessed an amazing library, and Pieper hit upon the idea of reading the letters of Goethe from that library. Soon, however, he decided to read the entire Weimar edition of fifty volumes, which were brought to him in sequence, two or three at a time. It was precisely in the seclusion, the limitation, the silence of Goethe that made the strongest impact on Pieper. Here was modern Germany's quintessential conversationalist intellectual, but the strength of his words came from the restraint behind them, even to the point of purposeful forgetting. --Book Jacket.

Modifying Adjuncts Ewald Lang,Claudia Maienborn,Cathrine Fabricius-Hansen.2013-02-06 Unlike the notion of argument that is central to modern linguistic theorizing, the phenomena that are commonly subsumed under the complementary notion adjunct so far have not attracted the attention they deserve. In this volume, leading experts in the field present current approaches to the grammar and pragmatics of adjuncts. The contributions scrutinize i.a. the argument-adjunct distinction, specify conditions of adjunct placement, discuss compositionality issues, and propose new analyses of event-related modification. They are meant to shed new light on an area of linguistic structure that is deemed to be notoriously overlooked.

Relevance and Irrelevance Jan Strassheim,Hisashi Nasu.2018-09-24 Relevance drives our actions and channels our attention; it shapes how we make sense of the world and communicate with each other. Irrelevance spreads a twilight which blurs the line between information we do not want to access and information we cannot access. In disciplines as diverse as philosophy, sociology, the information sciences and linguistics, "relevance" has been proposed as a key concept. This book is the first to bring together the often unrelated traditions. Researchers from different fields discuss relevance and relate it to the challenges of "irrelevance", which have so far been neglected despite their significance for our chances of making well-informed decisions and understanding others. The contributions focus on theoretical and conceptual questions, on specific factors and fields, and on practical and political implications of relevance and irrelevance as forces which are even stronger when they remain in the background.

Monte Carlo Simulation in Statistical Physics Kurt Binder,Dieter W. Heermann.2013-11-11 When learning very formal material one comes to a stage where one thinks one has understood the material. Confronted with a real-life problem, the passivity of this understanding sometimes becomes painfully clear. To be able to solve the problem, ideas, methods, etc. need to be ready at hand. They must be mastered (become active knowledge) in order to employ them successfully. Starting from this idea, the leitmotif, or aim, of this book has been to close this gap as much as possible. How can this be done? The material presented here was born out of a series of lectures at the Summer School held at Figueira da Foz (Portugal) in 1987. The series of lectures was split into two concurrent parts. In one part the formal material was presented. Since the background of those attending varied widely, the presentation of the formal material was kept as pedagogic as possible. In the formal part the general ideas behind the Monte Carlo method were developed. The Monte Carlo method has now found widespread application in many branches of science such as physics, chemistry,

and biology. Because of this, the scope of the lectures had to be narrowed down. We could not give a complete account and restricted the treatment to the application of the Monte Carlo method to the physics of phase transitions. Here particular emphasis is placed on finite-size effects.

Security and Democracy Under Pressure from Violence Michel Marcus, Council of Europe. 2003-01-01 This publication is part of a series linked to the Council of Europe's project Responses to violence in everyday life in democratic society which considers various aspects of policy making and law enforcement to combat crime and violence in society. Aspects discussed include: the need for reliable statistics to qualify and quantify crime; institutional responses; violence and personal responsibility; active citizenship; mediation; and links to wider issues of freedom and security.

The Exclusive Society Professor Jock Young. 1999-06-01 In this major new work, which Zygmunt Bauman calls a 'tour de force of breathtaking erudition and clarity', Jock Young charts the movement of the social fabric in the last third of the twentieth century from an inclusive society of stability and homogeneity to an exclusive society of change and division. Jock Young, one of the foremost criminologists of our time, explores exclusion on three levels: economic exclusion from the labour market; social exclusion between people in civil society; and the ever-expanding exclusionary activities of the criminal justice system. Taking account of the massive dramatic structural and cultural changes that have beset our society and relating these to the quantum leap in crime and incivilities, Jock Young develops a major new theory based on a new citizenship and a reflexive modernity.

Computational earthquake science. 2 Andrea Donnellan. 2004-11-22 Exciting developments in earthquake science have benefited from new observations, improved computational technologies, and improved modeling capabilities. Designing models of the earthquake generation process is a grand scientific challenge due to the complexity of phenomena and range of scales involved from microscopic to global. Such models provide powerful new tools for the study of earthquake precursory phenomena and the earthquake cycle. Through workshops, collaborations and publications, the APEC Cooperation for Earthquake Simulations (ACES) aims to develop realistic supercomputer simulation models for the complete earthquake generation process, thus providing a virtual laboratory to probe earthquake behavior. Part II of the book embraces dynamic rupture and wave propagation, computational environment and algorithms, data assimilation and understanding, and applications of models to earthquakes. This part also contains articles on the computational approaches and challenges of constructing earthquake models.

Backstreets Cecilie Høigård, Liv Finstad. 1992 Backstreets is about prostitution. It allows the individuals who participate in it—and prostitutes, pimps, and those who buy sexual services—to tell their own stories in their own words. Women, for example, explain why they become prostitutes and how they experience the daily sequence of tricks. Men discuss why they become customers of prostitutes and what they get out of the experience. Pimps describe how they see themselves and the prostitutes upon whom they depend. The authors have studied the prostitution market of Oslo for over ten years. Their research has involved extensive interviews with participants, observation of Oslo's prostitution district, personal interaction with prostitute women, and analysis of city police records. They conclude that prostitution is embedded in the gender relations of an economically stratified society and that those who experience prostitution over an extended period of time suffer deep emotional damage.

The New Criminology Revisited P. Walton, J. Young. 2016-07-27 In 1973 *The New Criminology* was published and quickly established itself as a key textbook in criminology, casting a major influence over a generation of scholars. It has remained in print ever since. This volume, published twenty-five years later, traces the major developments in the field including feminism, postmodernism, critical criminology and realism. The articles are by leading authorities from Britain, the United States and Australia and include Stan Cohen, Elliott Currie, Pat Carlen and Kerry Carrington as well as separate commentaries by the three original authors themselves: Ian Taylor, Paul Walton and Jock Young.

Contrasts in Scientific Style Joseph Stewart Fruton. 1990 Recounts the various styles of leadership shown by several prominent German chemists

and biochemists during the period 1830 to 1914. Featured particularly are chemists Liebig, Baeyer and Emil Fischer and biochemists Hoppe-Seyler, Kuhne and Hofmeister. In a final chapter, Fruton considers the relevance of the conclusions drawn from the style of these 19th- and early 20th-century men to the styles of more recent research groups in the chemical and biochemical sciences. Special emphasis is placed on their influence on their scientific progenies in Germany, and in England, Russia, and the U.S. Attention is given to the individual contributions of the junior members of these scientific groups to the growth of knowledge within their disciplines.

"This Is Berlin" William L. Shirer. 2014-11-17 The legendary CBS news journalist's selection of iconic World War II radio broadcasts from countries throughout Europe. William L. Shirer was the first journalist hired by CBS to cover World War II in Europe, where he continued to work for over a decade as a news broadcaster. This book compiles two and a half years' worth of wartime broadcasts from Shirer's time on the ground during WWII. He was with Nazi forces when Hitler invaded Austria and made it a part of Germany under the Anschluss; he was also the first to report back to the United States on the armistice between France and Nazi forces in June of 1940. His daily roundup of news from Paris, Vienna, Berlin, Rome, and London, which documented Nazi Germany and the conditions of countries under invasion and at war, became famous for its gripping urgency. Shirer brought a sense of immediacy to the war for listeners in the United States and worldwide, and his later books, including the seminal *Rise and Fall of the Third Reich*, became definitive works on World War II history. This collection of Shirer's radio broadcasts offers all the original suspense and vivid storytelling of the time, bringing World War II to life for a modern audience.

The Monte Carlo Method in Condensed Matter Physics Kurt Binder. 2012-12-06 The Monte Carlo method is now widely used and commonly accepted as an important and useful tool in solid state physics and related fields. It is broadly recognized that the technique of computer simulation is complementary to both analytical theory and experiment, and can significantly contribute to advancing the understanding of various scientific problems. Widespread applications of the Monte Carlo method to various fields of the statistical mechanics of condensed matter physics have already been reviewed in two previously published books, namely *Monte Carlo Methods in Statistical Physics* (Topics Current Physics, Vol. 7, 1st edn. 1979, 2nd edn. 1986) and *Applications of the Monte Carlo Method in Statistical Physics* (Topics Current Physics, Vol. 36, 1st edn. 1984, 2nd edn. 1987). Meanwhile the field has continued its rapid growth and expansion, and applications to new fields have appeared that were not treated at all in the above two books (e. g. studies of irreversible growth phenomena, cellular automata, interfaces, and quantum problems on lattices). Also, new methodic aspects have emerged, such as aspects of efficient use of vector computers or parallel computers, more efficient analysis of simulated systems configurations, and methods to reduce critical slowing down at phase transitions. Taken together with the extensive activity in certain traditional areas of research (simulation of classical and quantum fluids, of macromolecular materials, of spin glasses and quadrupolar glasses, etc.

Late Titian and the Sensuality of Painting Titian. 2008 In the mid-sixteenth century, at almost 60 years of age, Titian invented a new way of painting: the paint was applied to the canvas rapidly and freely and overlaid with brushstrokes that were both light and dense: the forms broke up and a great sensuality and profound spirituality became evident. Titian used an extraordinarily prescient technique to create engaging, stirring painting that in some ways seems to relate to the literary work of the poet Torquato Tasso and even take up the imaginary writings of Ludovico Ariosto published in Venice in the 1530s. Such a painting style had never previously been imagined and was so revolutionary that it was to influence many artists of subsequent centuries through to the modern age. Late Titian became the yardstick not only for younger contemporary painters like Tintoretto, Veronese and Bassano, but also great artists of subsequent centuries like Rubens, Rembrandt, Velazquez, Gericault and Delacroix and on to the Expressionists.

The Powerful Placebo Arthur K. Shapiro, Elaine Shapiro. 2000-10-17 The Powerful Placebo discusses the placebo effect over the centuries, reminding the reader how complex the issue is, from the very definition of a placebo and the success of dubious or fraudulent remedies to the modern worship of placebos as controls in clinical trials. The authors assert that until recently, the history of medical treatment was essentially the history of placebo effect.

Glassy Materials and Disordered Solids Kurt Binder, Walter Kob. 2011 This book gives a pedagogical introduction to the physics of amorphous solids and related disordered condensed matter systems. Important concepts from statistical mechanics such as percolation, random walks, fractals and spin glasses are explained. Using these concepts, the common aspects of these systems are emphasized, and the current understanding of the glass transition and the structure of glasses are concisely reviewed. This second edition includes new material on emerging topics in the field of disordered systems such as gels, driven systems, dynamical heterogeneities, growing length scales etc. as well as an update of the literature in this rapidly developing field.

Goethe Richard Friedenthal. 2017-07-28 The study of Goethe's life is a task that each generation must undertake anew. Thus writes Richard Friedenthal, author of this rich biography. Spanning eight momentous decades of war, revolution, and social upheaval, Goethe's life reveals itself as one of conflict and dynamic development, of inner contradiction and unceasing creativity. As novelist, dramatist, and poet, Goethe produced epochal works of fiery romanticism, only later to dedicate himself to a classical ideal of purity and measure. His superb love lyrics immortalize a succession of ardent relationships; yet, in him too, was a strain of frigid egotism mingled with an Olympian detachment. The new introduction serves to place in perspective this outstanding work on the German master. He was capable of tirelessly exploring the external world as physiologist, geologist, and botanist. He was equally capable of plunging to the depths of profound subjective analysis. A minister of state, a model of distinguished probity, Goethe nonetheless lived a life of passionate seeking, eternally questioning official values. Nothing perhaps better sums up this vast complexity than his lifelong work, Faust, the supreme dramatization of man's quest on earth.

The Limits of Epistemology Markus Gabriel. 2020-01-21 At the centre of modern epistemology lurks the problem of scepticism: how can we know that the forms of our cognition are compatible with the world? How can we state success conditions for knowledge claims without somehow transcending our discursive and fallible nature as knowers? By distinguishing different forms of scepticism, Markus Gabriel shows how all objective knowledge relies on shared discourses and how the essential corrigibility of knowledge claims is a crucial condition of their objectivity. We should understand scepticism not so much as posing a threat, but as offering a vital lesson about the fallibility of discursive thinking. By heeding this lesson, we can begin to reintegrate the solipsistic subject of modern epistemology back into the community of actual knowers. Taking his cue from Hegel, Wittgenstein and Brandom, Gabriel shows how intentionality as such is a public rather than a private phenomenon. He concedes that the sceptic can prove the necessary finitude of objective knowledge, but denies that this has to lead us into an aporia. Instead, it shows us the limits of the modern project of epistemology. Through an examination of different kinds of sceptical paradoxes, Gabriel not only demonstrates their indispensable role within epistemological theorising, but also argues for the necessary failure of all totalizing knowledge claims. In this way, epistemology, as the

discipline that claims knowledge about knowledge, begins to grasp its own fallibility and, as a result, the true nature of its objectivity. The Limits of Epistemology will be of great value to students and scholars of philosophy.

The Jewish White Slave Trade and the Untold Story of Raquel Liberman Nora Glickman.2012-10-12 This book recounts the events involving Raquel Liberman, an impoverished immigrant to Argentina that was forced by circumstances into prostitution, and the powerful Zwi Migdal, which controlled the recruitment and deployment of Jewish prostitutes in Argentina while maintaining mutually profitable relations with corrupt politicians and policemen. Liberman's story is presented as an example of individual courage and determination in the face of the violence and corruption of the prostitution business. Her struggle with the Zwi Migdal and triumphant public victory over her oppressors was widely publicized in newspapers and magazines, and was a political cause celebre in its time. This book gives readers an intimate view of how the affair caught the public imagination, and was interpreted and transformed by the artistic imagination.

The Composition of Meaning Alice ter Meulen, Werner Abraham.2004-10-31 In the modular design of generative theory the syntax- semantics interface has accounted all along for meanings at the level of Logical Form. The syntax- pragmatics interface, on the other hand, is the result of what one may call the 'pragmatic turn' in the linguistic theory, where content is partitioned into given and new information. In other words, the structural division of the clause has been subjected to criteria of information, or discourse structure. Both interfaces require a structurally descriptive inventory whose specific shapes can be motivated on theory-internal grounds only. The present collection of original articles develops the concept of these interfaces further. The papers in the first section focus on the syntax- semantics interface, those in the second section on the syntax- pragmatics interface.

The Curious Conversion of Thomas Chalmers John D. Clayton.2021 Thomas Chalmers was arguably the most popular Scot and influential churchman of his age, but when he was first educated, ordained, installed, and serving as a parish minister in the Church of Scotland, he was by his own admission not yet a converted Christian. How could a minister of the gospel not believe the gospel? How this happened is telling of his context, country, and church, but it is not a short story. From a confusion of church and state dating back to the Scottish Reformation to an increasing secularism in and through the Scottish Enlightenment, the Church of Scotland moved increasingly away from its Reformation roots and the necessity of the gospel in Christian conversion, as evidenced in the early life of Thomas Chalmers--

Ethics in Medicine Stanley Joel Reiser, Arthur J. Dyck, William J. Curran.1977 This book is a comprehensive and unique text and reference in medical ethics. By far the most inclusive set of primary documents and articles in the field ever published, it contains over 100 selections. Virtually all pieces appear in their entirety, and a significant number would be difficult to obtain elsewhere. The volume draws upon the literature of history, medicine, philosophical and religious ethics, economics, and sociology. A wide range of topics and issues are covered, such as law and medicine, truth-telling by the physician, research, population policy, genetics, abortion, dying, and individual rights in medical care. The selections span the centuries, beginning with material from the works of Hippocrates, continuing through Thomas Percival, John Stuart Mill, and Claude Bernard, down to modern commentators like Henry K. Beecher, Walsh McDermott, David L. Bazelon, Paul Freund, H. L. A. Hart, John Rawls, Paul Ramsey, Richard McCormick, Rashi Fein, and Bernard Barber. The text has eight major divisions, beginning with sections on the ethical dimensions of the physician-patient relationship in history; the moral bases of medical ethics; and regulation, compulsion, and protection of the consumer in clinical medicine and public health. Each of these sections includes key essays that appear for the first time. All of the book's major divisions contain primary documents: codes such as the Hippocratic Oath, Medieval Law for the Regulation of Medicine, and the first as well as the most recent code of the American Medical Association; court decisions, including those on Karen Quinlan and on abortion in the United States and West Germany; government documents such

as the statement of the National Commission on the Protection of Human Subjects, the Tuskegee Syphilis Report, the British Parliamentary debate on euthanasia, and the Council of Europe on rights of the sick and dying; and various published guidelines such as the Harvard Medical School brain death criteria, the American Hospital Association on patient's rights, and Pope Pius XII on the prolongation of life. Cases that illustrate moral dilemmas are provided for discussion purposes. Each section is preceded by a succinct editor's introduction. The documents and essays are of practical value for practitioners and students in medicine, law, ethics, and counselling, and for individual patients and groups concerned with medical care. Through encompassing divergent viewpoints, the essays and primary documents were selected to encourage humane practices and deepen understanding of the multiple traditions that shaped and do shape the development of medicine.

Binary Quadratic Forms Johannes Buchmann, Ulrich Vollmer. 2007-06-22 The book deals with algorithmic problems related to binary quadratic forms. It uniquely focuses on the algorithmic aspects of the theory. The book introduces the reader to important areas of number theory such as diophantine equations, reduction theory of quadratic forms, geometry of numbers and algebraic number theory. The book explains applications to cryptography and requires only basic mathematical knowledge. The author is a world leader in number theory.

The Cystic Fibrosis Transmembrane Conductance Regulator Kevin L. Kirk, David C. Dawson. 2003-10-31 The CFTR chloride channel is one of the most well studied transport proteins in biology. Yet there remain many mysteries about the functional properties and biological roles of this ABC transporter. The Cystic Fibrosis Transmembrane Conductance Regulator addresses a select series of 'hot' topics that relate to the function of CFTR, and the links between CFTR dysfunction and human disease (i.e., cystic fibrosis). The timeliness of these topics distinguishes this collection from previous volumes of this type. Given the general interest in CFTR, this collection will appeal to a broad readership with interests in CFTR, cystic fibrosis, ion channels and ABC transporters.

New Impulses in Word-Formation Susan Olsen. 2016-10-31 This special issue entitled *New Impulses in Word-Formation* demonstrates in thirteen individual, empirically oriented case studies how the methods gleaned from newer theoretical models (optimality theory, construction grammar, cognitive grammar, distributive morphology, parallel architecture) as well as from the linguistic sub-disciplines of psycholinguistics, neurolinguistics, corpus linguistics and computational linguistics can be applied lucratively to the field of word-formation. The individual contributions are from a team of international linguists and deal with a broad spectrum of interests divided almost equally between the two major areas of word-formation, derivation and composition.

Flow Sensing in Air and Water Horst Bleckmann, Joachim Mogdans, Sheryl L. Coombs. 2014-01-22 In this book, leading scientists in the fields of sensory biology, neuroscience, physics and engineering explore the basic operational principles and behavioral uses of flow sensing in animals and how they might be applied to engineering applications such as autonomous control of underwater or aerial vehicles. Although humans possess no flow-sensing abilities, countless aquatic (e.g. fish, cephalopods and seals), terrestrial (e.g. crickets and spiders) and aerial (e.g. bats) animals have flow sensing abilities that underlie remarkable behavioral feats. These include the ability to follow silent hydrodynamic trails long after the trailblazer has left the scene, to form hydrodynamic images of their environment in total darkness, and to swim or fly efficiently and effortlessly in the face of destabilizing currents and winds.

Growth and Defence in Plants R. Matyssek, Hans Schnyder, Wolfgang Oßwald, Dieter Ernst, Jean Charles Munch, Hans Pretzsch. 2012-09-14 Plants use resources, i.e. carbon, nutrients, water and energy, either for growth or to defend themselves from biotic and abiotic stresses. This volume

provides a timely understanding of resource allocation and its regulation in plants, linking the molecular with biochemical and physiological-level processes. Ecological scenarios covered include competitors, pathogens, herbivores, mycorrhizae, soil microorganisms, carbon dioxide/ozone regimes, nitrogen and light availabilities. The validity of the "Growth-Differentiation Balance Hypothesis" is examined and novel theoretical concepts and approaches to modelling plant resource allocation are discussed. The results presented can be applied in plant breeding and engineering, as well as in resource-efficient stand management in agriculture and forestry.

Transcending Tradition: Jewish Mathematicians in German Speaking Academic Culture Birgit Bergmann.2012-10-22 A companion publication to the international exhibition Transcending Tradition: Jewish Mathematicians in German-Speaking Academic Culture, the catalogue explores the working lives and activities of Jewish mathematicians in German-speaking countries during the period between the legal and political emancipation of the Jews in the 19th century and their persecution in Nazi Germany. It highlights the important role Jewish mathematicians played in all areas of mathematical culture during the Wilhelmine Empire and the Weimar Republic, and recalls their emigration, flight or death after 1933.

Preaching to Possible Selves Matthew D. Kim.2021 This in-depth study on preaching to second generation Korean Americans, the first of its kind, is based on empirical and ethnographic fieldwork. Matthew D. Kim, an award-winning author, conducted research with Korean American pastors and respondents across the United States. This book offers a new contextual homiletic model that enables Korean American preachers to engage in deeper levels of ethnic and cultural analysis in their sermon preparation and proclamation. His primary conceptual framework employs social psychologists Hazel Markus and Paula Nurius' theory of possible selves to facilitate the process of congregational exegesis in the second generation Korean American church context. This book will help preachers and pastors imagine new possible selves for their churches, congregants, and communities. The vision of a possible selves homiletic can be employed to any racial, ethnic, and cultural context. This book will serve as a primary or secondary source for undergraduate, graduate, and postgraduate courses on preaching, pastoral theology, communication studies, ethnic and racial studies, cross-cultural communication, or social psychology--

Meshfree Methods for Partial Differential Equations Michael Griebel, Marc A. Schweitzer.2012-12-06 Meshfree methods for the solution of partial differential equations gained much attention in recent years, not only in the engineering but also in the mathematics community. One of the reasons for this development is the fact that meshfree discretizations and particle models are often better suited to cope with geometric changes of the domain of interest, e.g. free surfaces and large deformations, than classical discretization techniques such as finite differences, finite elements or finite volumes. Another obvious advantage of meshfree discretizations is their independence of a mesh so that the costs of mesh generation are eliminated. Also, the treatment of time-dependent PDEs from a Lagrangian point of view and the coupling of particle models and continuous models gained enormous interest in recent years from a theoretical as well as from a practical point of view. This volume consists of articles which address

the different meshfree methods (SPH, PUM, GFEM, EFGM, RKPM etc.) and their application in applied mathematics, physics and engineering. *Cell Differentiation* Lutz Nover, M. Luckner, B. Parthier. 2011-12-16 Three years have elapsed since the publication of the first edition of this book (in German). The continued interest of our readers and the rapid progress of our knowledge in many fields necessitates a thoroughly revised and somewhat enlarged new edition. Cell differentiation is a prerequisite of life. It is defined as the process leading to the qualitatively and quantitatively selective realization of distinct parts of a given genetic material. Cell differentiation comprises five main aspects: (1) signal reception and transformation, (2) selective rearrangements of the genetic material, (3) differential gene expression, (4) organization of gene expression programs and (5) intercellular coordination of cell differentiation within the developmental programs of multicellular organisms. Despite the bewildering multiplicity of its results, i.e., the differentiated phenotypes of cells, there are apparently fundamental similarities with respect to the molecular mechanisms of the process itself. These mechanisms constitute the central subject of this book.
