School Science Practical Work in Africa Umesh Ramnarain.2020-06-01 School Science Practical Work in Africa presents the scope of research and practice of science practical work in African

schools. It brings together prominent science educators and researchers from Africa to share their experience and findings on pedagogical innovations and research-informed practices on school science practical work. The book highlights trends and patterns in the enactment and role of practical work across African countries. Practical work is regarded as intrinsic to science teaching and learning and the form of practical work that is strongly advocated is inquiry-based learning, which signals a definite paradigm shift from the traditional teacher-dominated to a learner-centered approach. The book provides empirical research on approaches to practical work, contextual factors in the enactment of practical work, and professional development in teaching practical work. This book will be of great interest to academics, researchers and post-graduate students in the fields of science education and educational policy.

How to Recruit and Retain Higher Education Students Tony Cook, Brian S. Rushton. 2009-09-10

How to Recruit and Retain Higher Education Students is an invaluable resource for academic staff, administrators and policy makers involved in student recruitment and improving student retention. It offers practical advice on how universities can influence the expectations of prospective students, allowing them to make sensible decisions about careers, courses and institutions. Many surveys of students who drop out of university show that most do so out of disappointment. Failing to understand what higher education was about quickly enough, they become confused and frustrated. Dropping out seems the best solution. This book describes a series of practices proven to encourage students to stay on, discussing the background research on student attrition. By preparing students better for their higher education experience, the practices in this book are effective not only in recruiting students but also in matching them to the right institutions and programmes. The practices described range from those reaching out in a broad way to communities of potential students, to university support for pre-entry examinations, to enhanced communication between institutions and applicants. All are described in sufficient detail to allow judgments to be made about how to use and adapt them to suit local needs. How to Recruit and Retain Higher Education Students provides a sound theoretical foundation for research into student retention and provides the necessary underpinning for those academic staff embarking on courses and assists in preparing them for their roles in both teaching and student support.

INSIGHT BIOLOGY Adewoye B. A.. 2022-11-22 The essence of this book is to give an insight into

theory of practical in biology. I am doubly sure that this text will expose students fully and give them ideas as to what is to be expected in any theory of practical examinations at the ordinary-level stage. Students need to study the questions and the standard answers in this book carefully, not on the periphery but on an in-depth one so as to guide them, thus enhancing better performance in theory of practical examinations. I hope this text will assist the students in the real sense of it in preparing them for theory of practical examinations in biology. I hereby present to you Insight Biology: Theory of Practicals for SSCE/GCE/NECO Candidates.

Some Developments in Research in Science and Mathematics in Sub-Saharan Africa Lorna Holtman.2008 Much attention in late-developing countries is given to providing access to studies which allow school leavers to enter science and technology-related careers. This book reviews research related to the crucial dimension of epistemological access to the disciplines of import, which students need as much as institutional access in order to improve their chances of success. A significant feature of this collection's research studies is that their empirical bases are highly localised, covering areas such as research methods, access, curriculum, instruction and assessment, and the relevance of science and mathematics education in Zimbabwe, Uganda, Swaziland, South Africa, Namibia, Malawi, Ghana and Lesotho. It is the outcome of a doctoral research capacity-development project, the Graduate Studies in Science, Mathematics and Technology Education (GRASSMATE).
