Minority Education Tove Skutnabb-Kangas, Jim Cummins.1988 In both Europe and North America during the past 20 years, controversy has surrounded the education of children from linguistic minority backgrounds. An increasing number of minority children are experiencing difficulties at school and many leave school with no formal qualifications. There are fears among many educators and policy-makers that an entire generation of alienated youth with no future prospects is being produced by western educational systems. This book analyses policy issues regarding the education of minority students in western industrialised societies and presents a number of case studies of programs that have been successful in reversing the pattern of minority students' academic failure. A central theme throughout the volume is that the causes of minority students' academic difficulties are rooted in the power relations between the dominant and subordinate groups in society. Schools have typically reflected and reinforced these power relations through strategies such as punishment of children for speaking their mother tongue at school with the result that minority students have not developed confidence in their own cultural identity or academic abilities. Reversal of minority students' school failure requires that educators set out to enable both minority students and communities to empower themselves. The presentation of case studies in which this empowerment has been successfully achieved is complemented by the perspectives of individuals and minority communities who have been involved in the struggle for educational and linguistic rights of minority children.

The Garland Handbook of African Music Ruth M. Stone.2010-04-02 The Garland Handbook of African Music is comprised of essays from The Garland Encyclopedia of World Music: Volume 1, Africa, (1997). Revised and updated, the essays offer detailed, regional studies of the different musical cultures of Africa and examine the ways in which music helps to define the identity of this particular area. Part One provides an in-depth introduction to Africa. Part Two focuses on issues and processes, such as notation and oral tradition, dance in communal life, and intellectual property. Part Three focuses on the different regions, countries, and cultures of Africa with selected regional case studies. The second edition has been expanded to include exciting new scholarship that has been conducted since the first edition was published. Questions for Critical Thinking at the end of each major section guide and focus attention on what musical and cultural issues arise when one studies the music of Africa -- issues that might not occur in the study of other musics of the world. An accompanying audio compact disc offers musical examples of some of the music of Africa.

Leonardo Pisano (Fibonacci) L. E. Sigler. 2014-06-28 The Book of Squares by Fibonacci is a gem in the mathematical literature and one of the most important mathematical treatises written in the Middle Ages. It is a collection of theorems on indeterminate analysis and equations of second degree which yield, among other results, a solution to a problem proposed by Master John of Palermo to Leonardo at the Court of Frederick II. The book was dedicated and presented to the Emperor at Pisa in 1225. Dating back to the 13th century the book exhibits the early and continued fascination of men with our number system and the relationship among numbers with special properties such as prime numbers, squares, and odd numbers. The faithful translation into modern English and the commentary by the translator make this book accessible to professional mathematicians and amateurs who have always been intrigued by the lure of our number system.

Potential Development Using Thinking Tools Cas Olivier. 2019-09-12 Educators need to empower learners to be prepared for the Fourth Industrial Revolution, to be thinkers with the ability to pioneer the future. This book cracks teaching and learning myths that led to learners being perceived as knowledge duplicators instead of being knowledge creators. Thinking tools move the focus of learning from mastering content to critical thinking. This requires the critical thinking toolkit, which is the mothership of all thinking. It engages learners' forever-wandering minds with the learning task at hand, which is the substitute for the traditional expectations of "paying attention" and "memorising". When employing thinking tools, learners become thinking engineers—taking ownership of what they must discover, create or solve. Within this paradigm of teaching, teachers directly engage with learners' brains, which goes beyond learner-centred teaching and defining learning as visual, auditory or kinaesthetic. The book is based on examples of thinking tools sessions.
