Contemporary Issues in African Sciences and Science Education Akwasi Asabere-Ameyaw, George Jerry Sefa Dei, Kolawole Raheem. 2012 In this careful articulation of science, the editors provide an intellectual marriage of Indigenous science and science education in the African context as a way of revising schooling and education. They define science broadly to include both the science of the natural/physical/biological and the 'science of the social'. It is noted that the current policy direction of African education continues to be a subject of intense intellectual discussion. Science education is very much at the heart of much current debates about reforming African schooling. Among the ways to counter-vision contemporary African education this book points to how we promote Indigenous science education to improve upon African science and technology development in general. The book also notes a long-standing push to re-examine local cultural resource knowings in order to appreciate and understand the nature, content and context of Indigenous knowledge science as a starting foundation for promoting African science and technology studies in general. It is argued that these interests and concerns are not mutually exclusive of each other but as a matter of fact interwoven and interdependent. The breadth of coverage of the collection reflect papers in science, Indigeneity, identity and knowledge production and the possibilities of creating a truly African-centred education. It is argued that such extensive coverage will engage and excite readers on the path of what has been termed 'African educational recovery'. While the book is careful in avoiding stale debates about the 'Eurocentricity of Western scientific knowledge' and the positing of 'Eurocentric science' as the only science worthy of engagement, it nonetheless caution against constructing a binary between Indigenous/local science and knowledges and Western 'scientific' knowledge. After all, Western scientific knowledge is itself a form of local knowledge, born out of a particular social and historical context. Engaging science in a more global context will bring to the fore critical questions of how we create spaces for the study of Indigenous science knowledge in our schools. How is Indigenous science to be read, understood and theorized? And, how do educators gather/collect and interpret Indigenous science knowledges for the purposes of teaching young learners. These are critical questions for contemporary African education?

Preparing Teachers for a Changing World Linda Darling-Hammond, John Bransford. 2012-07-12 Based on rapid advances in what is known about how people learn and how to teach effectively, this important book examines the core concepts and central pedagogies that should be at the heart of any teacher education program. Stemming from the results of a commission sponsored by the National Academy of Education, Preparing Teachers for a Changing World recommends the creation of an informed teacher education curriculum with the common elements that represent state-of-the-art standards for the profession. Written for teacher educators in both traditional and alternative programs, university and school system leaders, teachers, staff development professionals, researchers, and educational policymakers, the book addresses the key foundational knowledge for teaching and discusses how to implement that knowledge within the classroom. Preparing Teachers for a Changing World recommends that, in addition to strong subject matter knowledge, all new teachers have a basic understanding of how people learn and develop, as well as how children acquire and use language, which is the currency of education. In addition, the book suggests that teaching professionals must be able to apply that knowledge in developing curriculum that attends to students' needs, the demands of the content, and the social purposes of education: in teaching specific subject matter to diverse students, in managing the classroom, assessing student performance, and using technology in the classroom.

Discussion and Lecture Method in Chemistry Abubakar Nyamida. 2020-07-22 Research Paper (undergraduate) from the year 2020 in the subject Didactics - Chemistry, grade: 3.5, University of Jos, language: English, abstract: The main purpose of this study is to examine the effects of discussion

and lecture method on senior secondary two students' performance and interest in chemistry in Jos North, Nigeria. Specifically, the study sets out to determine the effects of discussion and lecture methods on academic achievements in chemistry and on academic achievement of male and female students who are taught chemistry. Teaching and learning are important parts of the process of education which are aimed at the development of learners' understanding and skills with which to become useful citizens in society. Education involves the total efforts of the community to raise its political, social and economic standard of living. The implication of this is the development of a nation which depends on largely the level of its scientific and technological literacy. Thus, the importance of chemistry as a subject cannot be underrated especially in Nigeria where the national income rests on petroleum and petrochemical industries.

absenteeism and beyond: instructional time loss and consequences Helen Abadzi. 2007 Abstract: Studies have shown that learning outcomes are related to the amount of time students engage in learning tasks. However, visits to schools have revealed that students are often taught for only a fraction of the intended time, particularly in lower-income countries. Losses are due to informal school closures, teacher absenteeism, delays, early departures, and sub-optimal use of time in the classroom. A study was undertaken to develop an efficient methodology for measuring instructional time loss. Thus, instructional time use was measured in sampled schools in Tunisia, Morocco, Ghana, and the Brazilian state of Pernambuco. The percentage of time that students were engaged in learning vis-à-vis government expectations was approximately 39 percent in Ghana, 63 percent in Pernambuco, 71 percent in Morocco, and 78 percent in Tunisia. Instructional time use is a mediator variable that is challenging to measure, so it often escapes scrutiny. Research suggests that merely financing the ingredients of instruction is not enough to produce learning outcomes; students must also get sufficient time to process the information. The quantity-quality tradeoff that often accompanies large-scale enrollments may be partly due to instructional time restrictions. Time wastage also distorts budgetary outlays and teacher salary rates. To achieve the Millennium Development Goals students must get more of the time that governments, donors, and parents pay for.

Multimedia Learning Richard E. Mayer. 2009-01-19 Although verbal learning offers a powerful tool, Mayer explores ways of going beyond the purely verbal. Recent advances in graphics technology and information technology have prompted new efforts to understand the potential of multimedia learning as a means of promoting human understanding. In this second edition, Mayer includes double the number of experimental comparisons, 6 new principles - signalling, segmenting, pertaining, personalization, voice and image principles. The 12 principles of multimedia instructional design have been reorganized into three sections - reducing extraneous processing, managing essential processing and fostering generative processing. Finally an indication of the maturity of the field is that the second edition highlights boundary conditions for each principle research-based constraints on when a principle is likely or not likely to apply. The boundary conditions are interpreted in terms of the cognitive theory of multimedia learning, and help to enrich theories of multimedia learning.

Basic Education Beyond the Millennium Development Goals in Ghana Peter Darvas, David Balwanz. 2013-12-11 Inequity is the central challenge facing basic education in Ghana and undercuts the potential contribution of basic education to Ghana's national development goals. Persistent disparities in education service delivery and inequitable allocation of resources in Ghana lead to highly inequitable educational outcomes. These inequities negatively affect system quality, efficiency and accountability and ultimately undermine broader national development. Wide-spread inequity in education service delivery significantly depresses system learning outcomes. This report describes a "missing middle" in terms of learning outcomes: While a small number of children perform well, the majority of pupils (more than 60%) pass through primary school without becoming proficient in numeracy and literacy. Specifically, children from Ghana's northern regions and deprived districts, poor and rural households and ethnic and linguistic minorities - students who require the most support to meet learning outcomes - receive, on average, disproportionately fewer resources from the government than their peers. Systemic inequities create this missing middle and drag down system performance. Following a decade of rapid change, as of 2013, more children are attending basic and senior high schools than at any time in the history of Ghana. In the past decade, Ghana has realized great growth, progress and change. Population growth, urbanization and significant GDP growth have changed the economic, political and social landscape of Ghana. In the past decade, incidence of extreme poverty has been cut in half. Introduction of Free, Compulsory, Universal Basic Education (FCUBE) and kindergarten has supported a near doubling of basic education enrollment in the past 15 years. Delivering basic education and ensuring equity has become more challenging. Compared to a decade ago, more stakeholders are involved in allocating and managing core education inputs and accountability systems remain unclear and weak. Addressing the deeply embedded inequities (e.g. allocation of trained teachers, support to deprived districts and populations) is further complicated by a complex and fragmented policy, management and financing environment. The persistence of inequity reflects the persistence of conflicting sector interests and poses genuine policy dilemmas. However, recent experience shows that accelerating progress toward equity and quality basic education for all is possible. Several recent initiatives in Ghana point to the possibility of improving equitable resource allocation, strengthening social protection and providing additional support to improve learning outcomes. For example, children with below-average learning outcomes in poorly resourced environments are likely to show measurable gains when provided additional support (e.g. instructional support, learning resources, management support, demand-side incentives).

Developing and Validating Test Items Thomas M. Haladyna,Michael C. Rodriguez.2013-07-18 Since test items are the building blocks of any test, learning how to develop and validate test items has always been critical to the teaching-learning process. As they grow in importance and use, testing programs increasingly supplement the use of selected-response (multiple-choice) items with constructed-response formats. This trend is expected to continue. As a result, a new item writing book is needed, one that provides comprehensive coverage of both types of items and of the validity theory underlying them. This book is an outgrowth of the author's previous book, *Developing and Validating Multiple-Choice Test Items*, 3e (Haladyna, 2004). That book achieved distinction as the leading source of guidance on creating and validating selected-response test items. Like its predecessor, the content of this new book is based on both an extensive review of the literature and on its author's long experience in the testing field. It is very timely in this era of burgeoning testing programs, especially when these items are delivered in a computer-based environment. Key features include ... Comprehensive and Flexible – No other book so thoroughly covers the field of test item development and its various applications. Focus on Validity – Validity, the most important consideration in testing, is stressed throughout and is based on the Standards for Educational and Psychological Testing, currently under revision by AERA, APA, and NCME Illustrative Examples – The book presents various selected and constructed response formats and uses many examples to illustrate correct and incorrect ways of writing items. Strategies for training item writers and developing large numbers of items using algorithms and other item-generating methods are also presented. Based on Theory and Research – A comprehensive review and synthesis of existing research runs throughout the book and complements the expertise of its authors.

History of Education in Nigeria A. Babs Fafunwa.2018-10-03 Originally published in 1974, a comprehensive history of Nigerian Education, from early times right through to the time of publication, had long been needed by all concerned with Education in Nigeria, students, teachers and educational administrators. No one was better qualified than Professor Fafunwa to provide such a book, and in doing so he gave due emphasis to the beginnings of Education in its three main stages of indigenous, Muslim and Christian Education. Nigerian Education had been considered all too often as a comparatively recent phenomenon, but this book points out from the start that 'Education is as old as Man himself in Africa' and that both Islam and Christianity were comparative newcomers in the field. A historical treatment of these three strands which have combined to make up the modern Educational system was vital to a clear understanding of what was needed for the future, and most of the first half of the book is concerned with these Educational beginnings. The imposing of a foreign colonial system on this framework did not always lead to a happy fusion of the systems, and the successes and the failures are examined in detail. There was no shortage of documentary evidence in the form of reports and statistics during the decades prior to publication, but this evidence was frequently scattered and inaccessible to the student, so that the author's careful selection of key evidence and reports, often drawn from his own personal experience, will be invaluable for those wishing to trace the development of Education in Nigeria up to the early 1970s. A knowledge of the history and development of the Nigerian Education system, of the numerous and intensely varied personalities and beliefs which have combined and often conflicted to shape it, is indispensable to all students in colleges and universities studying to become teachers. It is this knowledge that Professor Fafunwa set out to provide, drawing on his wide experience as teacher writer and educationalist.
