Nursing Outcomes Classification (NOC) Marion Johnson, Sue Moorhead. 2000 This second edition of the *Nursing Outcomes Classification (NOC)* contains 260 outcomes. Each outcome includes a label name; a definition; a set of indicators that

describe specific patient, caregiver, family, or community states related to the outcome; a 5point Likert-type measurement scale; and selected references used in the development of the outcome. Although we encourage the use of the indicators and measurement scale associated with the outcomes, the goal of the research team is to standardize the label name and definition for each outcome, which assist nurses in evaluating and quantifying patient status in relation to a particular outcome. Road Traffic Injury Prevention Training Manual Dinesh Mohan, Indian Institute of Technology, Delhi. 2006 Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measure and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

Educación y salud en grupos vulnerables Verónica Caballero Cala, Rosa María Zapata Boluda. 2019-03-11 El libro Educación y salud en grupos vulnerables nace del interés de profesionales e investigadores de la salud y la educación por radiografiar la situación de los principales grupos vulnerables en materia educativa y sanitaria, permitiendo, a través de esa interacción, conectar espacios de pensamiento y actuación en torno a las urgencias sociales del momento. Esta cartografía de la vulnerabilidad en los ámbitos socioeducativo y sanitario es especialmente acuciante en un contexto marcado por la crisis social, económica y migratoria, así como por los procesos de precarización a los que asisten los sectores menos privilegiados. La velocidad a la que se producen los cambios sociales y culturales, en un mundo globalizado, requiere de análisis y estrategias adaptación certeras. En ese sentido, el manual ofrece una compilación de aportaciones que buscan facilitar la actualización de las y los profesionales.

Overload, Performance Incompetence, and Regeneration in Sport
Manfred Lehmann, Carl Foster, Uwe Gastmann, Hans Keizer, Jürgen M. Steinacker. 2007-11-23 This volume summarizes the proceedings of the Reisenburg workshop which took place at Reisenburg Castle in November 1997. The castle is built on the site of an ancient Roman compound and situated in the south of Germany at the Danube river. Scientists from Australia, Austria, Belgium, Estonia, Germany, Italy, Netherlands, South Africa, Switzerland, and the United States participated in the workshop. Like the 1996 workshop, the proceedings of which will be published in *Medicine and Science in Sports and Exercise* in 1998, the 1997 workshop also focused on the topic of overtraining in its widest sense to deepen our knowledge in this particularly sensitive field of sports science and sports practice. The authors see the present volume in a context with the proceedings presented by Guten (ed.) *Running Injuries*; Saunders, Philadelphia (1997) and Kxeider, Fry, and O'Toole (eds.) *Overtraining in Sport*; Human Kinetics, Champaign IL (1997). Overtraining, that is, too much stress combined with too little time for regeneration, can be seen as a crucial and threatening problem within the modern athletic community, of which significance can already be recognized reading daily newspapers: . . .
