*The Invention of Infinity: Essays on Husserl and the History of Philosophy* Claudio Majolino.2023-10-19 This book covers Husserl's stance on the philosopher and the history of philosophy, whether or not such a history is part of the philosophical attitude itself, and if so, how Husserl's phenomenology might weigh in on such matters. Firstly, this text spells out some of the manifold ways in which the history of philosophy works its way in Husserl's phenomenology, showing how concepts, methods and problems drawn from various Ancient and Modern philosophical traditions (Platonism, Aristotelianism, Sophistry, Stoicism, Scholasticism, Modern Rationalism) are transformed and embedded within transcendental phenomenology itself. Secondly, it shows how a better understanding of the distinctive patterns by means of which Husserl's phenomenology confronts the history of philosophy could be extremely significant for historians of philosophy who are interested in learning something entirely new about the unexplored horizons of such concepts, methods and problems. Finally, based on such twofold historical and philosophical approach and thanks to a substantial reinterpretation of some key phenomenological concepts such as "multiplicity", "constitution", "attitude" and "variation", this book provides a novel and original reading of Husserl's overall philosophical project in its full meaning and scope. By doing so, this volume appeals to both students and researchers and critically engages in mainstream interpretations of phenomenology, suggesting a unique take on the idea of

transcendental phenomenology as a whole.

**Emotions in American History** Jessica C. E. Gienow-Hecht.2010 The study of emotions has attracted anew the interest of scholars in various disciplines, igniting a lively public debate on the constructive and destructive power of emotions in society as well as within each of us. Most of the contributors to this volume do not hail from the United States but look at the nation from abroad. They explore the role of emotions in history and ask how that exploration changes what we know about national and international history, and in turn how that affects the methodological study of history. In particular they focus on emotions in American history between the 18th century and the present: in war, in social and political discourse, as well as in art and the media. In addition to case studies, the volume includes a review of their fields by senior scholars, who offer new insights regarding future research projects.

**World History** Larry Krieger,D.C. Heath and Company.1997

*Doing History* Linda S. Levstik,Keith C. Barton.2011-01-26 Now in its fourth edition, this popular text offers a unique perspective on teaching and learning history in the elementary and middle grades. Through case studies of teachers and students in diverse classrooms and from diverse backgrounds, it shows children engaging in authentic historical investigations, often in the context of an integrated social studies curriculum. The central assumption is that children can engage in valid forms of historical inquiry-collecting and data analysis, examining the perspectives of people in the past, considering multiple interpretations, and creating evidence-based historical accounts. In each chapter, the authors explain how the teaching demonstrated in the vignettes reflects basic principles of contemporary learning theory, thus providing specific examples of successful activities and placing them in a theoretical context that allows teachers to adapt and apply them in a wide variety of settings. New in the Fourth Edition Expanded coverage of world history in two new chapters Integration of new technologies to support history instruction Updated classroom examples, bibliographies, and references

**Measuring History** S. G. Grant.2009-03-01 Measuring History complements the cases presented in Wise Social Studies Practices (Yeager & Davis, 2005). Yeager and Davis highlight the rich and ambitious teaching that can occur in the broad context of state-level testing. In this book, the chapter authors and I bring the particular state history tests more to the fore and examine how teachers are responding to them. At the heart of Measuring History are cases of classroom teachers in seven states (Florida, Kentucky, Michigan, New York, Texas, Mississippi, and Virginia) where new social studies standards and new, and generally high-stakes, state-level history tests are prominent. In these chapters, the authors describe and analyze the state's testing efforts and how those efforts are being interpreted in the context of classroom practice. The results both support and challenge

prevailing views on the efficacy of testing as a vehicle for educational reform. Catherine Horn (University of Houston) and I lay the groundwork for the case studies through a set of introductory chapters that examine the current environment, the research literature, and the technical qualities of history tests.

**Assessment of Mars Science and Mission Priorities** National Research Council, Division on Engineering and Physical Sciences, Space Studies Board, Committee on Planetary and Lunar Exploration. 2003-07-08 Within the Office of Space Science of the National Aeronautics and Space Administration (NASA) special importance is attached to exploration of the planet Mars, because it is the most like Earth of the planets in the solar system and the place where the first detection of extraterrestrial life seems most likely to be made. The failures in 1999 of two NASA missions-Mars Climate Orbiter and Mars Polar Lander-caused the space agency's program of Mars exploration to be systematically rethought, both technologically and scientifically. A new Mars Exploration Program plan (summarized in Appendix A) was announced in October 2000. The Committee on Planetary and Lunar Exploration (COMPLEX), a standing committee of the Space Studies Board of the National Research Council, was asked to examine the scientific content of this new program. This goals of this report are the following: -Review the state of knowledge of the planet Mars, with special emphasis on findings of the most recent Mars missions and related research activities; -Review the most important Mars research opportunities in the immediate future; -Review scientific priorities for the exploration of Mars identified by COMPLEX (and other scientific advisory groups) and their motivation, and consider the degree to which recent discoveries suggest a reordering of priorities; and -Assess the congruence between NASA's evolving Mars Exploration Program plan and these recommended priorities, and suggest any adjustments that might be warranted.
