The Oxford Handbook of Compassion Science Emma M. Seppälä, Emiliana Simon-Thomas, Stephanie L. Brown, Monica C. Worline, C. Daryl Cameron, James R. Doty. 2017-09-26 How do we define compassion? Is it an emotional state, a motivation, a dispositional trait, or a cultivated attitude? How does it compare to altruism and empathy? Chapters in this Handbook present critical scientific evidence about compassion in numerous conceptions. All of these approaches to thinking about compassion are valid and contribute importantly to understanding how we respond to others who are suffering. Covering multiple levels of our lives and self-concept, from the individual, to the

group, to the organization and culture, The Oxford Handbook of Compassion Science gathers evidence and models of compassion that treat the subject of compassion science with careful scientific scrutiny and concern. It explores the motivators of compassion, the effect on physiology, the co-occurrence of wellbeing, and compassion training interventions. Sectioned by thematic approaches, it pulls together basic and clinical research ranging across neurobiological, developmental, evolutionary, social, clinical, and applied areas in psychology such as business and education. In this sense, it comprises one of the first multidisciplinary and systematic approaches to examining compassion from multiple perspectives and frames of reference. With contributions from well-established scholars as well as young rising stars in the field, this Handbook bridges a wide variety of diverse perspectives, research methodologies, and theory, and provides a foundation for this new and rapidly growing field. It should be of great value to the new generation of basic and applied researchers examining compassion, and serve as a catalyst for academic researchers and students to support and develop the modern world.

(Re)Constructing Memory: Textbooks, Identity, Nation, and State James H. Williams, Wendy D. Bokhorst-Heng.2016-07-08 This book engages readers in thirteen conversations presented by authors from around the world regarding the role that textbooks play in helping readers imagine membership in the nation. Authors' voices come from a variety of contexts – some historical, some contemporary, some providing analyses over time. But they all consider the changing portrayal of diversity, belonging and exclusion in multiethnic and diverse societies where silenced, invisible, marginalized members have struggled to make their voices heard and to have their identities incorporated into the national narrative. The authors discuss portrayals of past exclusions around religion, ethnicity, sexual orientation, as they look at the shifting boundaries of insider and outsider. This book is thus about “who we are” not only demographically, but also in terms of the past, especially how and whether we teach discredited pasts through textbooks. The concluding chapters provides ways forward in thinking about what can be done to promote curricula that are more inclusive, critical and positively bonding, in increasingly larger and more inclusive contexts.

Because Oxford's response has not taken a revolutionary or dramatic form, outside observers have not always appreciated the scale of its transformation. Here full attention is given to the forces for change: the rapid growth in provision for the natural and social sciences; the advance of professionalism in scholarship, sport, and cultural achievement; the diffusion of international influences through Rhodes scholars, two world wars, and the University's mounting research priorities; the growing impact of government and of public funding; the steady advance of women; and the impact made by Oxford's broadened criteria for undergraduate admission. The

volume also provides valuable background material for the discussion of educational policy. In short, it presents the reader with a rich cornucopia of insight into many aspects of British life.
