Food Safety U.s. Government Accountability Office.2017-08-10 Numerous outbreaks of foodborne illnesses in past years continue to draw public attention to the safety of the nation's food supply. Prompt responses from government entities and the food industry can play a vital role in stopping the spread of illnesses and deaths, but unwarranted recalls of food products can trigger serious economic losses for the food industry. In response to congressional direction regarding the FDA Food Safety Modernization Act, GAO (1) examined government entities having the authority to order product recalls and how FDA implements its authority; (2) examined the challenges FDA faces, if any, in advising the public about food recalls or outbreaks of foodborne illness and how the agency has addressed these challenges; and (3) identified mechanisms that may compensate the food industry for erroneously ordered food recalls or erroneous food-related advisories. GAO reviewed documents from FDA and other government entities and FDA data and interviewed stakeholders from the food industry and consumer organizations, government officials, and experts in food safety or food law. *Product Recall Guidelines* British Retail Consortium.2003 Legislation places obligations on all those in the supply chain to ensure that only safe products are placed on the market. However, there will be occasions where mistakes occur or there are unforeseen circumstances that place the consumer at risk. Every year a significant number of products are withdrawn from the market, and in cases where the safety risk to the consumer is judged to be high, these result in product recalls. This publication provides practical guidance and advice on the key requirements for the product recall process, particularly to small and medium-sized companies who may lack experience in the handling of product safety issues. It is designed to

assist the development of policies and plans that can be linked to detailed operational procedures, with the aim of providing improved consumer protection whilst minimising the commercial impact.

Food Industry Quality Control Systems Mark Clute.2008-10-22 After a sordid litany of recalls courtesy of the food industry, consumers are pointing the finger at companies that have failed to institute proper recall prevention techniques. While historical analysis shows no company is exempt from recall risk, most can be prevented with an efficient and verifiable quality control program. Authored by a 20-year food management specialist, Food Industry Quality Control Systems is the only single-source summary of basic quality control program requirements. With an emphasis on top-down management commitment, this book demonstrates the complete information collection process and essential program elements, including pest control, lot coding, organizational charts, specifications, supplier certification, and sanitation programs. This valuable reference devotes an entire chapter to each of the program areas discussed for enhanced understanding of each. Additionally, it outlines a variety of sub-programs and functions, including HACCP, a seven-principle framework that assists food manufacturers in ensuring comprehensive and sustainable food safety. This example-filled resource helps industry decision-makers answer these key questions: What will management's commitment to quality be? Will top management provide the personnel and resources to create and maintain a thorough quality control program? Who will run the quality program, and what will the reporting structure be? Where will ideas regarding quality come from? This book is a springboard for food industry professionals to start their own quality protection program while adhering to federal, state, and local regulations. It is a clear and concise knowledge base that food safety and quality managers truly cannot afford to be without. Readers can visit the CRC website to download supporting programs in a plug-and-play format and adaptable forms with specific examples and resources that enable companies to customize forms to fit their own needs.
