Seeking Patterns, Building Rules Mary Jane Schmitt. 2005 The EMPOWER project aimed at integrating recent mathematical education reform into education programmes for adults and out-of-school youth. Over four years a collaboration of teachers and researchers with expertise in adult numeracy education and K-12 mathematics reform developed and piloted eight contextualised curriculum units organised around: number and operation sense; patterns, functions, and relations; geometry and measurement; and data and graphs. The content of the EMPOWER curriculum is consistent with the Principles and Standards for School Mathematics as well as adult focused frameworks such as Equipped for the Future Content Standards, Massachusetts ABE Curriculum Frameworks for Mathematics and Numeracy and the Adult Numeracy Network's Framework for Adult Numeracy Standards. The EMPOWER curriculum fosters a pedagogy of learning for understanding. Each unit comes with a teacher support guide and student workbook: * 'Seeking Patterns, Building Rules. Algebraic Thinking' (7.1 SCH 1) * 'Many Points Make a Point. Data and Graphs' (7.1 SCH 2) * 'Over, Around, and Within. Geometry and Measurement' (7.1 SCH 3) * 'Using Benchmarks. The scenarios are arranged to show how new math concepts are related to previous concepts they have already learned. Students naturally learn at different paces and these books help teachers manage flexible pacing in their classes. Learn more at www.summitmathbooks.com. Topics in this book: Using equations to find an intersection point The substitution method The elimination method When two lines do not intersect at a single point Scenarios that involve systems of equations Systems of linear inequalities More scenarios that involve systems of equations Cumulative Review Answer Key Book description: In this book, students find the intersection point of two lines by looking at their graphs. They then learn that they can find the intersection point by using algebraic methods called substitution and elimination. They use these methods to solve a variety of scenarios that can be modeled by two variables and two equations. They also learn how to graph systems of linear inequalities. Near the end of the book, they analyze a variety of scenarios that involve linear systems, while also getting a preview of nonlinear systems, which is a topic they will learn more about in Algebra 2: Book 6. This book builds on Algebra 1: Book 2. Student testimonials: This is the best way to learn math. Summit Math books are unlike typical textbooks. It doesn't matter how you learn or what speed you go at...you can learn at your own pace while still understanding all the material. Summit Math Books have guided me through algebra. They are the stepping stones of what it takes to think like a mathematician... I really enjoy learning from these books...they clearly demonstrate how concepts are built over other concepts. You don't just memorize, you actually understand it. Parent testimonials: Summit Math Books not only helped my daughter learn the math, they helped her to love learning math in and of itself! Summit Math books have a fun, self-paced way to explain math concepts... I am absolutely thrilled with this math program. The books are so well organized and the content builds from one lesson to the next. We are really impressed and grateful for our boys' understanding of what the math means, not just how to get problems right...we should all learn to understand math this way. As the mother of a teenage daughter who previously had occasional difficulty in math, it was refreshing to watch her actually enjoy her math class and to understand the subject matter without struggling I have three kids that have used Summit Math. Using these books, they have more freedom to learn and explore at their own pace during class, with notes already incorporated within the book. Teacher testimonials: Summit Math allows students to work at their own pace which allows me the opportunity to provide individualized attention to those who need it... Summit Math emphasizes understanding concepts rather than memorizing rules. Students take ownership while acquiring the necessary skills to solve meaningful math problems... It has been a real benefit having problem sets that are explicitly designed to guide students through the development of their understanding of the how and why behind the concepts they are studying.
