Trends in Midwifery Research Randell E. Balin. 2005 Midwifery is used to describe a number of different types of health practitioners, other than doctors, who provide prenatal care to expecting mothers, attend the birth of the infant and provide postnatal care to the mother and infant. Nurse-midwives also provide gynaecological care to women of all ages. Practitioners of midwifery are known as midwives, a term used in reference to both women and men (the term means with the woman). Most are independent practitioners who work with obstetricians when the need arises. They usually deal with normal births only but are trained to recognise and deal with deviation from the norm. If something abnormal is discovered during prenatal care, the client is sent to an obstetrician. Other midwives will deal with abnormal births, including breech birth. There are two main divisions of modern midwifery in the United States, nurse-midwives and direct-entry midwives. In the United Kingdom midwives are practitioners in their own right, and take responsibility for the antenatal, intrapartum and immediate postnatal care of women. In many parts of the world, midwives deliver far more children than doctors. This new book brings together the latest research on this ever-changing field.

Evidence Based Midwifery Helen Spiby, Jane Munro. 2009-10-13 Evidence based practice is now widely accepted as a fundamental tenet of midwifery. The importance of evidence in defining midwifery policy and practice in the UK health system, and others, is acknowledged and enduring. While the development and evaluation of research in midwifery is well charted, the question of how such evidence is incorporated into practice has, to date, received less attention and discussion in the midwifery profession. Answering this need, *Evidence Based Midwifery* focuses on the dissemination and use of evidence for midwifery practice, and explores midwives' experiences in using the evidence base to inform policy and enhance clinical practice. Written by a highly-regarded and diverse group from the UK and international midwifery community, *Evidence Based Midwifery* addresses issues of relevance to all midwives whether clinical practitioners or educators, students or supervisors, researchers or managers. Issues that influence evidence based midwifery are discussed, and topics covered include problem based learning, implementation of evidence based guidelines and the involvement of service users. Edited by founder members of the Evidence Based Midwifery Network International collaboration with contributions from the UK, Greece, Canada and the Netherlands Primary focus on the incorporation of evidence into midwifery practice Real-life examples throughout
