**There is No Such Thing as a Natural Disaster** Gregory Squires, Chester Hartman. 2013-01-11 There is No Such Thing as a Natural Disaster is the first comprehensive critical book on the catastrophic impact of Hurricane Katrina on New Orleans. The disaster will go down on record as one of the worst in American history, not least because of the government's inept and cavalier response. But it is also a huge story for other reasons; the impact of the hurricane was uneven, and race and class were deeply implicated in the unevenness. Hartman and Squires assemble

two dozen critical scholars and activists who present a multifaceted portrait of the social implications of the disaster. The book covers the response to the disaster and the roles that race and class played, its impact on housing and redevelopment, the historical context of urban disasters in America and the future of economic development in the region. It offers strategic guidance for key actors - government agencies, financial institutions, neighbourhood organizations - in efforts to rebuild shattered communities.

**Handbook of Research on Multidisciplinary Perspectives on Managerial and Leadership Psychology** Johnson, Rick

D..2021-01-22 The subject of leadership and managerial psychology exists as a sub-branch of psychology within the fields of industrial and organizational psychology. There still appears to be ongoing debate regarding the core pathology for gaining managerial expertise in professional roles relative to having suitable leadership skills and managerial knowledge beyond the direct daily work involved in organizations. Professional organizations inherently include varied levels of sensitive human interactions, which further necessitates their management professionals to have leadership styles that are adjustable contingent on a given situation. Relative to this edited book, managerial psychology is being utilized in a way that may subsequently seek to develop a series of scientific theory principles where the focus is to develop managerial axioms that advance contemporary existing knowledge surrounding professional management logic. The Handbook of Research on Multidisciplinary Perspectives on Managerial and Leadership Psychology provides value uncovered by a collaboration of generalists and specialists who bring professional managerial and leadership opinions to light through narratives and research inclusive of fundamental theory principles that can be applied in practice and academia. This edited reference is focused on the enhancement of management research through managerial psychology while highlighting topics including business process knowledge, management in diverse discipline situations and professions, corporate leadership responsibility, leadership of self and others, and leadership psychology in a variety of different fields of work. This book is ideally designed for leadership and management professionals, academicians, students, and

**Only in New Orleans** Luis Mirón, Brian R. Beabout, Joseph L. Boselovic. 2015-07-22 With 2015 marking the 10th commemoration of Hurricane Katrina, education reform in New Orleans continues to garner substantial local, national, and international attention. Advocates and critics alike have continued to cite test scores, new school providers, and different theories of governance in making multiple arguments for and against how contemporary education policy is shaping public education and its role in the rebuilding of the city. Rather than trying to provide a single, unified account of education reform in New Orleans, the chapters in this volume provide multiple ways of approaching some of the most significant questions around school choice and educational equity that have arisen in the years since Katrina. This collection of research articles, essays, and journalistic accounts of education reform in New Orleans collectively argues that the extreme makeover of the city's public schools toward a new market-based model was shaped by many local, historically specific conditions. In consequence, while the city's schools have been both heralded as a model for other cities and derided as a lesson in the limits of market-based reform, the experience of education reform that has taken place in the city – and its impacts on the lives of students, families, and educators – could have happened only in New Orleans.

The Opportunity Equation Eric Schwarz.2014-09-02 Schwarz, founder of the groundbreaking Citizen Schools program, shares his vision for reducing inequality by pairing successful adults with low-income students. Parental wealth now predicts adult success more than at any point in the last hundred years. And yet as debates about education rage on, and wealth-based achievement gaps grow, too many people fix the blame on one of two convenient scapegoats: poverty or our public schools. But in fact, low-income kids are learning more now than ever before. The real culprit for rising inequality, Eric Schwarz argues in *The Opportunity Equation*, is that wealthier kids are learning much, much more—mostly outside of school. In summer camps, robotics competitions, sessions with private tutors, and conversations around the dinner table, children from more affluent families build the skills and social networks that propel them to success. In *The Opportunity Equation*, Schwarz tells the story of how he founded the pioneering Citizen Schools program to combat rising inequality by bringing these same opportunities to children who don't have access to them. By increasing learning time in schools and harnessing the power of an army of volunteers with various skills and professional backgrounds—lawyers, engineers, carpenters, journalists, nonprofit leaders, and grandmothers who sew—Citizen Schools offers after-school apprenticeships that provide the building blocks for adult success. Recounting the triumphs and setbacks he's encountered in implementing the

program, Schwarz shows that some of the nation’s lowest-performing schools in its lowest-income cities can, with help, provide their students with many of the same experiences wealthy communities afford to their children. The results have been proven: in the dozen school districts, from New York to Oakland, that have partnered with Citizen Schools, rates of attendance, proficiency, graduation, and college acceptance have gone up—and the achievement gap closes. At a time when many stakeholders in the education debates are looking for new, silver-bullet shortcuts to educational excellence, Schwarz shows that the best solution is human-centered, rooted in the American tradition of citizen voluntarism, and, most important, achievable. We can provide quality education for all students and close the opportunity gap in this country—and we can do it together.

Foundation for Success.2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform

future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.
