**Geek Mafia** Rick Dakan.2008-03-01 Fired from a job he hated at a company he loved, videogame designer Paul Reynolds is drowning his sorrows in late-morning margaritas when he meets an alluring, pink-haired conwoman named Chloe. With her gang of technopirate friends, Chloe helps Paul not only take revenge on his former employers, but also extort a small fortune from them in the process. What more could a recently unemployed, over-worked videogame designer in Silicon Valley ask for? In return for Chloe’s help, Paul agrees to create counterfeit comic books for one of her crew’s criminal schemes. In the process he falls in for their fun loving, drug fueled “off the grid” lifestyle almost as fast as he falls head over heels for Chloe. Wary of the Crew’s darker side, but eager to impress both the girl and the gang, Paul uses his game design expertise to invent a masterful con of his own. If all goes according to plan, it will be one for the ages. But can he trust any of them, or is he the one who’s really being conned? Inspired by author Rick Dakan’s own eventful experiences in the videogame and comic book industries, *Geek Mafia*, satisfies the hunger in all of us to buck the system, take revenge on corporate America, and live a life of excitement and adventure.

**Pipeline Systems** E.P. Evans,B. Coulbeck.2013-03-09 This conference provides a forum for exchange of technical and operational information across a wide range of pipeline activities. Various supply and distribution industries, and their service organisations, have traditionally approached pipeline systems from many different perspectives. The organisers believe that significant benefits can be gained by enabling representatives from the oil, gas, water, chemical, power and related industries to present their latest ideas and methods. An awareness of these alternative methodologies and technologies should result in a more unified and coherent approach to each individual type of pipeline system. The overall theme of the conference is the optimisation of pipeline systems, through design analysis, component specification, operational strategies and performance evaluation, in order to minimise both risk and the lifetime cost of ownership. Wherever possible emphasis is given to important developing technologies with special consideration to use of computational equipment and methods. SYSTEMS APPROACH For the major activities of design, operation and performance; pipeline systems can be conveniently classified in terms of the system: components, constraints and objectives. These are described using fluid terminology, to suit the majority of conference participants, as given below: Components consist of pumps and valves (controls), pipe networks (transmission and distribution), reservoirs (storage) and consumer demands (disturbances). The arrangement of these components, to form the system, must take into account the conflicting requirements of structural, hydraulic, and cost, performance.
