The Social (Re)Production of Architecture Doina Petrescu,Kim Trogal.2017-07-14 The Social (Re)Production of Architecture brings the debates of the 'right to the city' into today's context of ecological, economic and social crises. Building on the 1970s' discussions about the 'production of space', which French sociologist Henri Lefebvre considered a civic right, the authors question who has the right to make space, and explore the kinds of relations that are produced in the process. In the emerging post-capitalist era, this book addresses urgent social and ecological imperatives for change and opens up questions around architecture's engagement with new forms of organization and

practice. The book asks what (new) kinds of 'social' can architecture (re)produce, and what kinds of politics, values and actions are needed. The book features 24 interdisciplinary essays written by leading theorists and practitioners including social thinkers, economic theorists, architects, educators, urban curators, feminists, artists and activists from different generations and global contexts. The essays discuss the diverse, global locations with work taking different and specific forms in these different contexts. A cutting-edge, critical text which rethinks both practice and theory in the light of recent crises, making it key reading for students, academics and practitioners.

American Scientists and Nuclear Weapons Policy Robert G. Gilpin.2015-12-08 As this study traces the history of the dramatic intra-scientific conflict over nuclear weapons which has developed since World War II, it analyzes the politically relevant ideas, attitudes, and behavior of those scientists who have been influential in the formulation of American policy toward nuclear weapons. The author contends that the emergence of the scientist into the mainstream of American political life is one of the great events of our history. As he assays the situation, he emphasizes the growing need for effective measures for integrating scientist-advisers into national policy-making processes. This well documented book will be of lasting value to both scientists and public administrators, and it will be of vital interest to all concerned with current problems of the nuclear era. Peter Hujar Paul Kasmin Gallery.2016 It's a vanished world, and Peter Hujar was right there in it. The Lower East Side between 1972 and 1985 - filled with artists, wannabe artists and hangers-on - was a community of the misbegotten gathered from every town in America and relocated in the mean streets between Broadway and the Bowery. Nothing but their talent, their flamboyance, their rank gender-bending mockery and their arch irony supported them. Some made their names. Many came to grief. A few made art. In those days, the gutted streets of the Lower East Side looked like a war zone. Everyone lived and worked on the extreme outer margins of money and art, penniless and unknown. As a community, Downtown was a counterstatement to the rich New York of the banks, museums,

media, corporations ... and the art world itself. That Downtown is forever gone. Time, gentrification, disease and death have taken their toll and turned this vibrant epoch into a chapter of art history. But before it vanished, its extravagant cast sat for Peter Hujar's camera - and is now alive again in front of our eyes. Featured among others: Joe Brainard, William Burroughs, Remy Charlip, Edwin Denby, Divine, Ray Johnson, Fran Lebowitz, Charles Ludlum, Susan Sontag, Paul Thek, John Waters, Robert Wilson, David Wojnarowicz.

Acoustic Guitars Ben Elder, Teja Gerken, John Morrish, Jerry Uwins, Mikael Jansson, Dave Hunter. 2018-02-13 Acoustic Guitars: The Illustrated Encyclopedia is the most comprehensive guide of its type ever produced, covering decades of great instruments and the people who played them. You will find here the highest quality photos of acoustic guitars produced by every significant maker, from Alvarez to Zemaitis, plus detailed information, and a host of action pictures of important players from pop, rock, jazz, country classical, blues, and folk. An acoustic guitar need not be a simple brown box with a neck attached. Acoustic Guitars: The Illustrated Encyclopedia celebrates the unusual, the different and the purely bizarre in addition to the assured roots-based craft of the finest unadorned instruments, underlining the sheer diversity and variety of the acoustic stringed instruments that have been built and sold and played through three centuries. Here are resonator guitars made since the 1920s by Dobro, National, and others, often with highly decorated metal bodies; revered flat-tops from Martin, Taylor, Gibson, and more; peculiarly shaped and oddly featured creations from many of the custom builders; early 20th-century harp guitars with extra strings and extended bodies; creative archtops from D'Angelico, Epiphone, Benedetto, and more; and plastic-equipped constructions from Ovation. The comprehensive and informative text is in a clear A-to-Z format organized by brand name, written and researched by a unique team of the world's leading authorities on the subject. Acoustic

Celtic Myths Miranda Jane Green.1993 As non-literates, the Celts left no written record of their lives, their beliefs, and the stories which were such an important part of their culture. Here Dr. Green uses the works of contemporary commentators from the Classical world, later Christian scribes recording oral traditions, and archaeological evidence to discuss Celtic myths and their religious beliefs and rituals. Codes and Automata Jean Berstel, Dominique Perrin, Christophe Reutenauer.2010 This major revision of Berstel and Perrin's classic Theory of Codes has been rewritten with a more modern focus and a much broader coverage of the subject. The concept of unambiguous automata, which is intimately linked with that of codes, now plays a significant role throughout the book, reflecting developments of the last 20 years. This is complemented by a discussion of the connection between codes and automata, and new material from the field of symbolic dynamics. The authors have also explored links with more practical applications, including data compression and cryptography. The treatment remains self-contained: there is background material on discrete mathematics, algebra and theoretical computer science. The wealth of exercises and examples make it ideal for self-study or courses. In summary, this is a comprehensive reference on the theory of variable-length codes and their relation to automata.

From Christoffel Words to Markoff Numbers Christophe Reutenauer. 2019-01-15 In 1875, Elwin Bruno Christoffel introduced a special class of words on a binary alphabet linked to continued fractions which would go on to be known as Christoffel words. Some years later, Andrey Markoff published his famous theory, the now called Markoff theory. It characterized certain quadratic forms and certain real numbers by extremal inequalities. Both classes are constructed using certain natural numbers known as Markoff numbers and they are characterized by a certain Diophantine equality. More basically, they are constructed using certain words essentially the Christoffel words.

The link between Christoffel words and the theory of Markoff was noted by Ferdinand Frobenius in 1913, but has been neglected in recent times. Motivated by this overlooked connection, this book looks to expand on the relationship between these two areas. Part 1 focuses on the classical theory of Markoff, while Part II explores the more advanced and recent results of the theory of Christoffel words.
