Grammar and the Teaching of Writing Rei R. Noguchi.1991 Intended for practitioners, this study has three principal aims: (1) to reduce the breadth of formal grammar instruction by first locating those areas where grammar and writing overlap and then identifying those kinds of writing problems most amenable to treatment with a grammar-based approach; (2) to decrease the classroom hours spent on formal grammar instruction by showing how to capitalize on the already acquired yet unconscious knowledge that all native writers have of their language; and (3) to make this streamlined writer's grammar more productive by showing how to integrate it with style, content, and organization. The book is directed toward teachers of writing who, to varying degrees, struggle with the unwieldy partnership of grammar and writing. Chapters 1 and 2 serve to examine some probable reasons why grammar instruction has failed to improve writing quality, to delimit radically the scope of grammar instruction, and to identify specific areas where a knowledge of a minimal set of grammatical categories might be of help. Chapters 3 and 4 focus on the use of native-speaker abilities in place of formal grammar instruction to treat certain kinds of sentence-level writing problems. Chapter 5 suggests a promising way to integrate the diminished focus on grammar with style, content, and organization. Finally, chapter 6 summarizes several pragmatic paradoxes that currently beset grammar instruction in the schools. (MG)

Intracellular Lipid Transport Guillaume Drin.2019-02-21 This detailed book provides technical approaches to tackle a variety of questions related to intracellular lipid transport in order to improve our understanding at different scales of how lipids are accurately displaced between organelles, across long distances or at membrane contact sites, or within cellular membranes. The volume begins with methodologies to measure the movement of varied lipid species between or in organelle membranes, inside eukaryotic cells, including plant cells, or in bacteria, and continues in vitro or in silico approaches aiming to define, more from a biochemical and structural standpoints, how lipid transfer proteins (LTPs) or flippases/scramblases precisely function. Written for the highly successful *Methods in Molecular Biology* series, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls. Authoritative and practical, *Intracellular Lipid Transport: Methods and Protocols* serves as an ideal guide for researchers seeking to shed light on diverse aspects of this critical and often elusive cellular process.

Lignin and Lignans as Renewable Raw Materials Francisco G. Calvo-Flores, José A. Dobado, Joaquín Isac-García, Francisco J. Martín-Martínez. 2015-12-14 As naturally occurring and abundant sources of non-fossil carbon, lignin and lignans offer exciting possibilities as a source of commercially valuable products, moving away from petrochemical-based feedstocks in favour of renewable raw materials. Lignin can be used directly in fields such as agriculture, livestock, soil rehabilitation, bioremediation and the polymer industry, or it can be chemically modified for the fabrication of specialty and high-value chemicals such as resins, adhesives, fuels and greases. Lignin and Lignans as Renewable Raw Materials presents a multidisciplinary overview of the state-of-the-art and future prospects of lignin and lignans. The book discusses the origin, structure, function and applications of both types of compounds, describing the main resources and values of these products as carbon raw materials. Topics covered include: • Structure and physicochemical properties • Lignin detection methods • Biosynthesis of lignin • Isolation methods • Characterization and modification of lignins • Applications of modified and unmodified lignins • Lignans: structure, chemical and biological properties • Future perspectives This book is a comprehensive resource for researchers, scientists and engineers in academia and industry working on new possibilities for the application of renewable raw materials. Saline Lakes John M. Melack, Robert Jellison, David B. Herbst. 2013-04-18 Inland saline waters are threatened worldwide by diversion and pollution of their inflows, introductions of exotic species and economic development of these ecologically valuable habitats. Since 1979 a series of international symposia on inland saline waters has served to strengthen and expand the scope of limnological research on inland saline waters. The seventh conference continued this tradition and the papers derived from the conference focused on the ecology of microbial communities, the influence of habitat geochemistry on biogeography of flora and fauna, physical and geochemical processes, and the conservation of inland saline waters. Of particular note are papers on Walker Lake, Nevada (USA), and the Salton Sea and Mono Lake, California (USA). Continued local, national and international efforts are required to inform the public and decision-makers about the environmental problems faced by saline waters. The papers in

this volume will serve this end and should be of interest to aquatic ecologists, limnologists, aquaculturalists, and water resource managers.

Sustainable Insect Pest Management S. Ignacimuthu,S. Jayaraj.2005 Overexploitation of natural resources and excessive chemicalization of agriculture have led to poor sustainability of farm production. Indiscriminate use of agricultural chemicals has resulted in problems of pest resurgence and development of resistance on the one hand and has posed serious problems of environmental contamination through residues in food chain on the other hand. The importance of achieving food production through the use of ecofriendly sustainable pest management techniques is being realized more and more in the recent past. Eminent scientists from different research institutions have looked into this aspect seriously and have come up with many enlightening suggestions compiled together in this book.

Sabkha Ecosystems M. Ajmal Khan,Hans-Jörg Barth,Benno Böer.2006-09-22 Research on sabkha ecology commenced only a few decades ago and sabkhat were considered as wasteland. It is only now, that environmental managers realize that sabkhat are ecosystems with a research, development, and conservation value. This multidisciplinary volume is a first comprehensive documentation of sabkha research in the Arabian peninsula region, including contributions from 16 countries. Topics covered include aspects of geology, hydrology, geomorphology, zoology, botany, ecology, ecosystem analysis, past, present, and future land use methods and development, and nature conservation at the landscape level.

Solar and Interplanetary Dynamics M. Dryer, Einar Tandberg-Hanssen. 2012-12-06 Informal discussions in 1977 among a number of scientists asso

ciated with solar and interplanetary physics revealed a need for a dialogue between the two often-divergent groups. It was clear that the latter group was dependent essentially on the sun for its *raison d'etre*. On the other hand it was also clear that the former group could benefit in its search for insight vis-a-vis solar activity by looking beyond the shell of the inner corona. Needless to add that the combined solar/interplanetary topic is relevant to astrophysics when one considers stellar winds and binary star flows. It was felt, therefore, that a symposium was essential to bring together, for the first time, leading solar and interplanetary physicists from the international community to discuss and record herein their own research. The fundamental physical processes underlying our own capricious star's activity can be understood only by the coupling of solar and interplanetary topics in an intimate observational and theoretical structure. This book, intended for active research scientists and advanced graduate students, is an important step in this direction. The background of solar and interplanetary dynamics is provided in Part I (The Life History of Coronal Structures and Fields) and Part II (Coronal and Interplanetary Responses to Long Time Scale Phenomena).

Sustainable Ammonia Production Inamuddin, Rajender Boddula, Abdullah M. Asiri. 2020-01-09 This book presents sustainable synthetic pathways and modern applications of ammonia. It focuses on the production of ammonia using various catalytic systems and its use in fuel cells, membrane, agriculture, and renewable energy sectors. The book highlights the history, investigation, and development of sustainable pathways for ammonia production, current challenges, and state-of-the-art reviews. While discussing industrial applications, it fills the gap between laboratory research and viable applications in large-scale production.

Nicotinic Acetylcholine Receptors in the Nervous System Francesco Clementi, Cecilia Gotti, Emanuele Sher. 2013-06-29 The acetylcholine nicotinic receptor is an ionic channel whose aperture is directly controlled by acetylcholine. It is a key molecule in the chemical communication between nerve cells and between nerve cell and muscle. The structure and function of muscular nicotinic receptors have been unraveled in recent years and its beauty and mysteries were reviewed in the Santorini NATO ARW organized by Dr. Maelicke in 1986. The neat, linear structure of this molecule and its conservation throughout evolution, from bacteria to humans, have led to the suggestion that it has reached the optimal structure for performing its function. But when scientists began to look at the nicotinic receptor in the nervous system, they found several surprises. From the beginning, pharmacological and physiological experiments, have made it clear that the functional characteristics of neuronal nicotinic receptors are substantially different from those of muscle receptors. Furthermore, recent sophisticated techniques such as patch clamp and gene cloning have revealed that the nicotinic receptor in the nervous system is not a single molecule but (although there are some important exceptions) a large family of similar molecules, which have in common the property of binding nicotinic agonists or antagonists. Over the last few years, the physiological implications of nicotinic receptors have been reevaluated on the basis of more precise behavioural and pharmacological techniques. Moreover, the involvement of nicotinic receptors in degenerative pathologies of the eNS, such as Parkinson's and Alzheimer's disease, has also been discovered very recently.

Stratigraphic Analysis of Layered Deposits Ömer Elitok. 2012-04-27 Stratigraphy, a branch of geology, is the science of describing the vertical and lateral relationships of different rock formations formed through time to understand the earth history. These relationships may be based on lithologic properties (named lithostratigraphy), fossil content (labeled biostratigraphy), magnetic properties (called magnetostratigraphy), chemical features (named chemostratigraphy), reflection seismology (named seismic stratigraphy), age relations (called chronostratigraphy). Also, it refers to archaeological deposits called archaeological stratigraphy. Stratigraphy is built on the concept the present is the key to the past which was first outlined by James Hutton in the late 1700s and developed by Charles Lyell in the early 1800s. This book focuses particularly on application of geophysical methods in stratigraphic investigations and stratigraphic analysis of layered basin deposits from different geologic settings and present

continental areas extending from Mexico region (north America) through Alpine belt including Italy, Greece, Iraq to Russia (northern Asia).
