Ocean's Trial Demelza Carlton.2014 Smuggled ashore by the kind widow Merry D'Angelo, Maria begins her new life in the colonial port city of Fremantle. With the help of a young fisherman named Tony, she fights to find her place among a people so different to her own. Yet danger lurks beneath the surface of the turbulent harbour waters as her past races to catch up with her; threatening her future and her friends, and forcing her to choose between her old love and the new. A tiny taste of what's in store: Merry bowed her head. I understand. But what will you do? What work do you know? I know fish and I know the ocean. That is all, I said forlornly. For all my hopes, I already felt lost. Her world was still painfully new to me. I think I can help you find a job. A job for a girl who knows fish and the ocean. But you will need a name. Your father's, your husband's... as I am Meryl D'Angelo, you must have a last name, too. I can't tell you, I replied. I'd hoped... She laughed. Speranza. Hope in Italian. If you won't tell me your real name, you will be Maria Speranza, the young fisherman's widow who lives in hope. She shooed me toward the door. Go now and send the telegram. The sooner he hears you're alive, the sooner you'll be in his arms again. She squeezed past me, pulling on her gloves before donning a hat. I need to speak to some friends to see if they can help you. Merry hurried out the front door. I had a goal, a hope for the future. And a name to go with it. Maria Speranza, the widow who lived in hope. And for the first time, I did. Arctic Human Development Report Joan Nymand Larsen, Gail Fondahl. 2015-02-18 The goals of the second volume of the AHDR - Arctic Human Development Report: Regional Processes and Global Linkages - are to provide an update to the first AHDR (2004) in terms of an assessment of the state of Arctic human development; to highlight the major trends and changes unfolding related to the various issues and thematic areas of human development in the Arctic over the past decade; and, based on this assessment, to identify policy relevant conclusions and key gaps in knowledge, new and emerging Arctic success stories. The production of AHDR-II on the tenth anniversary of the first AHDR makes it possible to move beyond the baseline assessment to make valuable comparisons and contrasts across a decade of persistent and rapid change in the North. It addresses critical issues and emerging challenges in Arctic living conditions, quality of life in the North, global change impacts and adaptation, and Indigenous livelihoods. The assessment contributes to our understanding of the interplay and consequences of physical and social change processes affecting Arctic residents' quality of life, at both the regional and global scales. It shows that the Arctic is not a homogenous region. Impacts of globalization and environmental change differ within and between regions, between Indigenous and non-Indigenous northerners, between genders and along other axes.

The Spanish Lake Oskar Hermann Christian Spate. 2004-11-01 This work is a history of the Pacific, the ocean that became a theatre of power and conflict shaped by the politics of Europe and the economic background of Spanish America. There could only be a concept of the Pacific once the limits and lineaments of the ocean were set and this was undeniably the work of Europeans. Fifty years after the Conquista, Nueva España and Peru were the bases from which the ocean was turned into virtually a Spanish lake.

What did it get me? A small raft drifting across the Indian Ocean, with nothing but the sound of waves and the smell of salt and coal-smoke. Smoke meant a ship. I was saved. I'll take care of you.

How Modern Science Came Into the World H. F. Cohen.2010 Once upon a time 'The Scientific Revolution of the 17th century' was an innovative concept that inspired a stimulating narrative of how modern science came into the world. Half a century later, what we now know as 'the master narrative' serves rather as a strait-jacket - so often events and contexts just fail to fit in. No attempt has been made so far to replace the master narrative. H. Floris Cohen now comes up with precisely such a replacement. Key to his path-breaking analysis-cum-narrative is a vision of the Scientific Revolution as made up of six distinct yet narrowly interconnected, revolutionary transformations, each of some twenty-five to thirty years' duration. This vision enables him to explain how modern science could come about in Europe rather than in Greece, China, or the Islamic world. It also enables him to explain how half-way into the 17th century a vast crisis of legitimacy could arise and, in the end, be overcome.

Maximum Harm Michele R. McPhee.2017-04-04 In *Maximum Harm*, veteran investigative journalist Michele R. McPhee unravels the complex story behind the public facts of the Boston Marathon bombing. She examines the bombers' roots in Dagestan and Chechnya, their struggle to assimilate in America, and their growing hatred of the United States - a deepening antagonism that would prompt federal prosecutors to dub Dzhokhar Tsarnaev America's worst nightmare. The difficulties faced by the Tsarnaev family of Cambridge, Massachusetts, are part of the public record. Circumstances less widely known are the FBI's recruitment of the older brother, Tamerlan Tsarnaev, as a mosque crawler to inform on radical separatists here and in Chechnya; the tracking down and killing of radical Islamic separatists during the six months he spent in Russia - travel that raised eyebrows, since he was on several terrorist watchlists; the FBI's botched deals and broken promises with regard to his immigration; and the disenchantment, rage, and growing radicalization of Tamerlan and Dzhokhar, along with their mother, sisters, and Tamerlan's wife, Katherine. *Maximum Harm* is also a compelling examination of the Tsarnaev brothers' movements in the days leading up to the Boston Marathon bombing on April 15, 2013, the subsequent investigation, the Tsarnaevs' murder of MIT police officer Sean Collier, the high-speed chase and shootout that killed Tamerlan, and the

manhunt in which the authorities finally captured Dzhokhar, hiding in a Watertown backyard. McPhee untangles the many threads of circumstance, coincidence, collusion, motive, and opportunity that resulted in the deadliest attack on the city of Boston to date.

Science and Anti-science Gerald James Holton.1993 What is good science? What goal--if any--is the proper end of scientific activity? Is there a legitimating authority that scientists may claim? How serious a threat are the anti-science movements? These questions have long been debated but, as Gerald Holton points out, every era must offer its own responses. This book examines these questions not in the abstract but shows their historic roots and the answers emerging from the scientific and political controversies of this century. Employing the case-study method and the concept of scientific themata that he has pioneered, Holton displays the broad scope of his insight into the workings of science: from the influence of Ernst Mach on twentieth-century physicists, biologists, psychologists, and other thinkers to the rhetorical strategies used in the work of Albert Einstein, Niels Bohr, and others; from the bickering between Thomas Jefferson and the U.S. Congress over the proper form of federal sponsorship of scientific research to philosophical debates since Oswald Spengler over whether our scientific knowledge will ever be complete. In a masterful final chapter, Holton scrutinizes the anti-science phenomenon, the increasingly common opposition to science as practiced today. He approaches this contentious issue by examining the world views and political ambitions of the proponents of science as well as those of its opponents--the critics of establishment science (including even those who fear that science threatens to overwhelm the individual in the postmodern world) and the adherents of alternative science (Creationists, New Age healers, astrologers). Through it all runs the thread of the author's deep historical knowledge and his humanistic understanding of science in modern culture. *Science and Anti-Science* will be of great interest not only to scientists and scholars in the field of science studies but also to educators, policymakers, and all those who wish to gain a fuller understanding of challenges to and doubts about the role of science in our lives today.

A Psalm for the Wild-Built Becky Chambers.2021-07-13 Winner of the Hugo Award! In *A Psalm for the Wild-Built*, bestselling Becky Chambers's delightful new Monk and Robot series, gives us hope for the future. It's been centuries since the robots of Panga gained self-awareness and laid down their tools; centuries since they wandered, en masse, into the wilderness, never to be seen again; centuries since they faded into myth and urban legend. One day, the life of a tea monk is upended by the arrival of a robot, there to honor the old promise of checking in. The robot cannot go back until the question of what do people need? is answered. But the answer to that question depends on who you ask, and how. They're going to need to ask it a lot. Becky Chambers's new series asks: in a world where people have what they want, does having more matter? The cabins are all full of supplies Grumpy McGregor ordered in Fremantle. There's definitely no women aboard, the second man scoffed.The voices sounded like they were just outside the door. The wide open door, I realised, wishing I'd thought to close it behind me. I know what I saw. They were as big as melons. Not one of them flappers - a real woman.Melons? the second man echoed. Next thing you'll tell me she was beautiful, too, and beckoning. His pitch crept impossibly high. Come to my cabin, Black, and I'll show you my melons.Black laughed. Didn't need to go into the cabin to see 'em. She was as naked as the day she was born. I could see every jiggle as she walked...You're daft. Not three hours out of port and you're imagining naked women with enormous melons. Warfare in a Fragile World Stockholm International Peace Research Institute, Arthur H. Westing. 1980 Among the crucial problems that confront mankind today are those associated with a degraded environment. This book examines the extent to which warfare and other military activities contribute to such degradation. The military capability to damage the environment and to cause ecological disruption has escalated, and there is no sign that the level of conflict in the world is decreasing. The military use and abuse of each of the several major global habitats -- temperate, tropical, desert, arctic, insular, and oceanic -- are evaluated separately in the light of the civil use and abuse of that habitat--Dust jacket.
