The Caste of Merit Ajantha Subramanian. 2019-12-03 How the language of "merit" makes caste privilege invisible in contemporary India. Just as Americans least disadvantaged by racism are most likely to endorse their country as post-racial, Indians who have benefited from their upper-caste affiliation rush to declare their country post-caste. In *The Caste of Merit*, Ajantha Subramanian challenges this comfortable assumption by illuminating the controversial relationships among technical education, caste formation, and economic stratification in modern India. Through in-depth study of the elite Indian Institutes of Technology (IITs)—widely seen as symbols of national promise—she reveals the continued workings of upper-caste privilege within the most modern institutions. Caste has not disappeared in India but instead acquired a disturbing invisibility—at least when it comes to the privileged. Only the lower castes invoke their affiliation in the political arena, to claim resources from the state. The upper castes discard such claims as backward, embarrassing, and unfair to those who have earned their position through hard work and talent. Focusing on a long history of debates surrounding access to engineering education, Subramanian argues that such defenses of merit are themselves expressions of caste privilege. The case of the IITs shows how this ideal of meritocracy serves the reproduction of inequality, ensuring that social stratification remains endemic to contemporary democracies.

Graph Theory with Applications to Engineering and Computer Science Narsingh Deo. 1974 Because of its inherent simplicity, graph theory has a wide range of applications in engineering, and in physical sciences. It has of course uses in social sciences, in linguistics and in numerous other areas. In fact, a graph can be used to represent almost any physical situation involving discrete objects and the relationship among them. Now with the solutions to engineering and other problems becoming so complex leading to larger graphs, it is virtually difficult to analyze without the use of computers. This book is recommended in IIT Kharagpur, West Bengal for B.Tech Computer Science, NIT Arunachal Pradesh, NIT Nagaland, NIT Agartala, NIT Silchar, Gauhati University, Dibrugarh University, North Eastern Regional Institute of Management, Assam Engineering College, West Bengal University of Technology (WBUT) for B.Tech, M.Tech Computer Science, University of Burdwan, West Bengal for B.Tech. Computer Science, Jadavpur University, West Bengal for M.Sc. Computer Science, Kalyani College of Engineering, West Bengal for B.Tech. Computer Science. Key Features: This book provides a rigorous yet informal treatment of graph theory with an emphasis on computational aspects of graph theory and graph-theoretic algorithms. Numerous applications to actual engineering problems are incorporated with software design and optimization topics.

Engineering Mathematics II Sergei Silvestrov, Milica Rančić. 2017-02-10 This book highlights the latest advances in engineering mathematics with a main focus on the mathematical models, structures, concepts, problems and computational methods and algorithms most relevant for applications in modern technologies and engineering. Poverty and Famines Amartya Sen.1983-01-20 The main focus of this book is on the causation of starvation in general and of famines in particular. The author develops the alternative method of analysis—the 'entitlement approach'—concentrating on ownership and exchange, not on food supply. The book also provides a general analysis of the characterization and measurement of poverty. Various approaches used in economics, sociology, and political theory are critically examined. The predominance of distributional issues, including distribution between different occupation groups, links up the problem of conceptualizing poverty with that of analyzing starvation.
