Life in the Air Mark Gottdiener.2001 This book is not just about air travel. It is about the emergent social world of flying. It concerns air space and behavior in the air the way someone else might look at cities and street behavior. Economic, political, and cultural aspects are all considered. . . . Airports have now become specific places in their own right that, in a certain sense, now. . . are very much like cities. Frequent flying also has produced its very own culture. Rules of behavior are subscribed to in the air. Unique behaviors at terminals and in the passenger cabin have emerged that contrast with life on the ground. In chapters below I explore these interesting aspects of etiquette, eroticism, and bi-coastalism, a human activity that is only possible because of our present society's evolution. . . . Only now have we begun to appreciate our emergent global culture. The world is shrinking just as the opportunities for travel expand. -from the Introduction

The Loyal Subject: Heinrich Mann Heinrich Mann.1998-03-01 Published in 1918, *Der Untertan* by Heinrich Mann (1871-1950) - previously issued in the United States only in parts under the title *Man of Straw* - is a satirical novel that connects the tradition of nineteenth-century German literature with the larger problems faced on the eve of the Nazi era. This edition of *The Loyal Subject* is introduced and edited by Helmut Peitsch. The translation is adapted, with new portions translated by Daniel Theisen.

Ecolinguistics Reader Alwin Fill,Peter Mühlhäusler.2006-05-01 Thirty years ago a new linguistic paradigm was created when Einar Haugen combined language with ecology. For Haugen, 'the ecology of language' meant the study of the interrelations between languages in the human mind and in the multilingual community. Since then a special branch of linguistics, named Ecolinguistics, has developed in which the connection between language and ecology has been established in a variety of ways and using a multitude of methods and approaches. In addition to the original ecolinguistic topics of language interrelation, language endangerment and language pressure, *Ecolinguistics Reader* also gives due consideration to the themes of biological and linguistic diversity as well as the ecocritical aspect.

Aspects of Metaphor in Physics Hanna Pulaczewska.2011-05-03 With reference to copious case studies, this book attempts to give a broad and comprehensive view of the multiplicity of forms taken by metaphor in physics. A diachronic presentation of the views hitherto advanced on the role of metaphor in the natural sciences provides an introduction to the crucial issues. By means of a broad definition of metaphor as a lexical, semantic, and conceptual phenomenon, metaphor is identified at various levels of physics discourse: in metatheory and methodology; in the sociology of the origin and evolution of science; in theory and conceptualization, including physics models; in education; and finally in linguistic expression, including terminology. Whereas historians and theoreticians of science reduce the question of metaphor in physics to the question of the role of scientific models, where one area of physics provides concepts and structures for another area, the perspective adopted here is that of cognitive semantics. The study inquires into the way in which concept-formation and terminology in physics avails itself of the metaphoric bent immanent in everyday

language, conceptualizing abstract ideas in spatial terms, inanimate things as intelligent, measurable phenomena in terms of the visual. Attention is also given to the way in which metaphoric processes make it possible to integrate new knowledge into old and sometimes obsolete structures rather than eliminating those structures altogether.

America in Europe Germán Arciniegas.1986 In this nimble work, Germán Arciniegas, one of South America's great minds, sets history on its ear. Too often have we heard that Columbus's discovery of America heralded the importation of Europe to the New World. What Arciniegas considers here is the argument in reverse. Indeed, the New World has so profoundly affected the Old, Arciniegas says, that 1492 marks the date Europe began its Americanization. With a grand, almost cinematic sweep, Arciniegas takes the reader from continent to continent and from influence to outcome. Copernicus, for example, was twenty when Columbus discovered America. The discovery had an enormous effect on his concept of astronomy and that, in turn, had the most profound effects on European intellectual identity. He shows how Cartesian philosophy and baroque art have identifiable roots in American soil. How Vivaldi's music was inspired by Moctezuma. How Garibaldi's Risorpimento can be traced to Montevideo. How Benjamin Franklin, Thomas Jefferson, and Tom Paine decisively influenced the French Revolution. It was from America's experience with slavery and colonialism that Europe learned the meaning of the word independence. And, lofty concepts aside, it was from America that Europe received goods that would change the tastes of its palate and the face of its trade: tobacco, potatoes, corn, tomatoes, chocolate...and gold. Combining deftness with scholarly mastery, Arciniegas here gives us his most daring work--one that will stimulate animated discussion among European and American intellectuals for many years to come.--From jacket flap.

The Benthic Boundary Layer I. McCave.2012-12-06 The Conference on the Benthic Boundary Layer was held under the auspices of the NATO Science Committee as part of its continuing effort to promote the useful progress of science through international cooperation. Science Committee Conferences are deliberately designed to focus attention on unsolved problems, with carefully selected participants invited to provide complementary expertise from a variety of relevant disciplines. Through intensive discussion in small groups they seek to reach a consensus on assessments and recommendations for future research emphasis, which it is hoped will be of value to the larger scientific community. The subjects treated over the past few years have been as varied as science itself-e.g., computer software engineering, chemical catalysis, and materials and energy research. The present effort evolved from informal discussions between marine geologists, chemists, and biologists which underlined the desirability of improved communication among those concerned with the benthic layer. In both scientific and technological terms this is an exciting frontier, rich in promise but poorly understood at present. It is particularly striking to realize that there are at least as many definitions of the benthic layer as there are disciplines involved, and it seemed clear that there was much to be gained by a detailed exchange of views on research capabilities, trends, and priorities. The results of the meeting appear to have confirmed the hopes of the sponsors.

Floods Keith Smith,Roy Ward.1998-06-29 This book is concerned with the causes and consequences of river and coastal floods and the ways in which people can respond to the flood hazard. Individual chapters address issues such as floods as natural hazards; impacts and interpretations of flood hazard; causes, spatial characteristics and form of river floods and coastal floods; flood estimation; flood defence; flood forecasting and warning; other responses including land use planning and insurance; and a concluding discussion of problems, policies and prospects. Floods has been written by two experienced and successful authors whose complementary skills are combined to give a broad, comprehensive and up-to-date treatment of the subject which can be used not only as a text book or learning manual but also as an authoritative reference source. This has been achieved by organising and structuring the material to demonstrate the continuity and linkages between the causes and impacts of flooding and the many possible responses to the flood hazard. At the same time the book ensures that discussion of each of the main themes and topics is, as far as is practicable, self-contained. The book is timely in several aspects. It addresses the topicality and universality of floods which are an increasing hazard at a time of global environmental change (climate, land use, population distribution etc.). It also offers the layman and practitioner alike a synthesis and clarification of many individual research efforts near the close of the International Decade for Natural Disaster Reduction.

Oceanic Hotspots Roger Hekinian,Peter Stoffers,Jean-Louis Cheminée.2012-12-06 Ocean Hotspots provides a comprehensive overview of recent and ongoing research on intraplate volcanism in the ocean basins with special emphasis on the Pacific Ocean. The geology of the seamounts and their associated seamount chains is described, along with detailed geophysical, geochemical and hydrothermal observations made by a multi-disciplinary group of marine geoscientists. These observations lead to a deeper understanding of how the ascending mantle melts, represented by hotspots, are able to penetrate the lithosphere, build seamounts, and enhance hydrothermal circulation. The fixed hotspot-generated seamount chains also provide key constraints on plate tectonic reconstructions on the Earth's crust.

Das Boot Lothar Gunther Buchheim.2021-11-25 Filled with almost unbearable tension and excitement, DAS BOOT is one of the best stories ever written about war, a supreme novel of the Second World War and an acclaimed film and TV drama. It is autumn 1941 and a German U-boat commander and his crew set out on yet another hazardous patrol in the Battle of the Atlantic. Over the coming weeks they must brave the stormy waters of the Atlantic in their mission to seek out and destroy British supply ships. But the tide is beginning to turn against the Germans in the war for the North Atlantic. Their targets now travel in convoys, fiercely guarded by Royal Navy destroyers, and when contact is finally made the hunters rapidly become the hunted. As the U-boat is forced to hide beneath the surface of the sea a cat-and-mouse game begins, where the increasing claustrophobia of the submarine becomes an enemy just as frightening as the depth charges that explode around it. Of the 40,000 men who served on German submarines, 30,000 never returned. Written by a survivor of the U-boat fleet, DAS BOOT is a psychological drama merciless in its intensity, and a classic novel of the Second World War.

Greenspeak Rom Harré,Jens Brockmeier,Mühlhäusler.1998-11-12 In this interdisciplinary examination of the discourse of environmentalism, the authors explore the linguistic, philosophical, psychological and cultural-historical aspects of environmental discourse; rather than environmental phenomena themselves. This volume is not advocacy on environmentalism, rather, it is an analysis of the means of persuasion and the techniques of advocacy used by both sides of the environmental debate between 'conservationists' and 'conservatives'. The book includes an analysis of the

concepts of time and space in their linguistic manifestations. Another theme is the interdependencies of the natural world with political and economic institutions.
