**Making Meaning by Making Connections** Kathy L.

Schuh.2016-10-20 This book documents those first links that students make between content they learn in their classrooms and their prior experiences. Through six late-elementary school case studies these knowledge construction links are brought to life. The links of the students are often rich in describing who these individuals are, where they are in their learning process, and what is meaningful to them. Many times, these links point to what has been learned, both in and out of school, and the contexts when and where that learning took place. The mind as rhizome metaphor was used to guide the development and interpretation of the studies while the lens of Peircian semiotics provides an interpretation for these initial links. The resulting grounded theory is presented through a rich and extensive presentation of excerpts from classroom observations, student interviews, and a student writing activity and describes the varying types of student links, how the links were prompted, the relationships between what the students were learning and what they already knew, and specific types of in-school links. The narrative includes how these links were supported or inhibited in the classroom drawing on the roles of the teachers in the classrooms and what constituted authority sources of information in those classrooms. Before exploring the students' linking as a process of ongoing semiosis and how this process is part of a dynamic system, a study of the relationship between student knowledge links and achievement is shared. This rich narrative will be of interest to scholars and practitioners alike, and includes an extensive appendix documenting the research methods.

Not what was fashionable, not what political and educational vested interests wanted to champion, but what actually produced the best results in terms of improving learning and educational outcomes. It became an instant bestseller and was described by the TES as revealing education's 'holy grail'. Now in this latest book, John Hattie has joined forces

with cognitive psychologist Greg Yates to build on the original data and legacy of the Visible Learning project, showing how it's underlying ideas and the cutting edge of cognitive science can form a powerful and complimentary framework for shaping learning in the classroom and beyond. Visible Learning and the Science of How We Learn explains the major principles and strategies of learning, outlining why it can be so hard sometimes, and yet easy on other occasions. Aimed at teachers and students, it is written in an accessible and engaging style and can be read cover to cover, or used on a chapter-by-chapter basis for essay writing or staff development. The book is structured in three parts - 'learning within classrooms', 'learning foundations', which explains the cognitive building blocks of knowledge acquisition and 'know thyself' which explores, confidence and self-knowledge. It also features extensive interactive appendices containing study guide questions to encourage critical thinking, annotated bibliographic entries with recommendations for further reading, links to relevant websites and YouTube clips. Throughout, the authors draw upon the latest international research into how the learning process works and how to maximise impact on students, covering such topics as: teacher personality; expertise and teacher-student relationships; how knowledge is stored and the impact of cognitive load; thinking fast and thinking slow; the psychology of self-control; the role of conversation at school and at home; invisible gorillas and the IKEA effect; digital native theory; myths and fallacies about how people learn. This fascinating book is aimed at any student, teacher or parent requiring an up-to-date commentary on how research into human learning processes can inform our teaching and what goes on in our schools. It takes a broad sweep through findings stemming mainly from social and cognitive psychology and presents them in a useable format for students and teachers at all levels, from preschool to tertiary training institutes.

Creating Connections Erin Tobul,Ellen D'Amore.2018 The middle grades years can be a difficult time for young adolescents. Before students can learn, they need to know that you, their teacher, see them and get them. But making connections with students can be challenging. What do we need to change in our pedagogy or our teaching styles to relate to our students with a better balance of social-emotional care and academic content? And how can we do this so we bond with each and every student? The Advisory Pride Program offers a way for you to create connections with students, helping them feel like they are cared for while helping them develop the soft skills essential for high school and college. The Advisory Pride Program has five themes arranged in three sequences, and each chapter includes an overview of the theme, a sample agenda, activities, and formative assessments. be read by anyone concerned with the academic success of the increasingly diverse population of undergraduates in colleges and universities.--Ernest Pascarella, Petersen Professor of Higher Education, University of Iowa Comprehensive yet easy to follow, *Learning and Development* is designed to help faculty, student affairs professionals, and other educators understand how students learn and what they can do to foster student achievement. Sharon Silverman and Martha Casazza reveal how diverse developmental needs--such as lack of self-esteem or cultural alienation--can be at the root of a student's learning difficulties. They draw from the latest theory and research to explore the critical connection between learning and development in six key areas: (1) self and identity; (2) motivation; (3) interaction with the environment; (4) ways of knowing; (5) learning styles and preferences; and (6) self-regulation and goal setting. The authors also present six case studies to show how educators can assess and resolve learning problems while enriching and advancing their own teaching expertise. Written in clear, nontechnical language, *Learning and Development* provides useful, systematic approaches for making connections between teaching and learning.

**A Connected Curriculum for Higher Education** Dilly Fung.2017-06-07 Is it possible to bring university research and student education into a more connected, more symbiotic relationship? If so, can we develop programmes of study that enable faculty, students and 'real world' communities to connect in new ways? In this accessible book, Dilly Fung argues that it is not only possible but also potentially transformational to develop new forms of research-based education. Presenting the Connected Curriculum framework already adopted by UCL, she opens windows onto new initiatives related to, for example, research-based education, internationalisation, the global classroom, interdisciplinarity and public engagement. A Connected Curriculum for Higher Education is, however, not just about developing engaging programmes of study. Drawing on the field of philosophical hermeneutics, Fung argues how the Connected Curriculum framework can help to create spaces for critical dialogue about educational values, both within and across existing research groups, teaching departments and learning communities. Drawing on vignettes of practice from around the world, she argues that developing the synergies between research and education can empower faculty members and students from all backgrounds to contribute to the global common good.

The legality of Library Genesis has been in question since 2015 because it allegedly grants access to pirated copies of books and paywalled articles, but the site remains standing and open to the public. Ebooks and Text Archives: From the Internet Archive; a library of fiction, popular books, children's books, historical texts and academic books. The free books on this site span every possible interest. If you are looking for Indie books, Bibliotastic provides you just that for free. This platform is for Indie authors and they publish modern books. Though they are not so known publicly, the books range from romance, historical or mystery to science fiction that can be of your interest. The books are available to read online for free, however, you need to create an account with Bibliotastic in order to download a book. The site they say will be closed by the end of June 2016, so grab your

favorite books as soon as possible. Both fiction and non-fiction are covered, spanning different genres (e.g. science fiction, fantasy, thrillers, romance) and types (e.g. novels, comics, essays, textbooks). Unlike Project Gutenberg, which gives all books equal billing, books on Amazon Cheap Reads are organized by rating to help the cream rise to the surface. However, five stars aren't necessarily a guarantee of quality; many books only have one or two reviews, and some authors are known to rope in friends and family to leave positive feedback. Want to listen to books instead? LibriVox is home to thousands of free audiobooks, including classics and out-of-print books.
