Overextended and Loving Most of It Lisa Harper.2013-09-03 Would you consider your life stretched to the limit? Are you a burn-the-candle-at-both-ends kind of gal with lots of room for improvement when it comes to creating margins for rest? But you actually love it and wouldn’t want it any other way? Well, so does Lisa Harper. In her humorous and packed-with-biblical-wisdom way, Lisa shows us that it is possible for a frazzled nature to be glorifying to the Lord. Every late-night conversation with a hurting friend and each precious, adopted child needing a little extra tender loving care—exhausting, yet imperative, ways to be extensions of the gospel. In each of these vignettes illustrating Lisa’s overextended life, we learn that even in the middle of our own pure motives and hectic schedules, it is only by resting in God’s sovereign mercy that we are able to keep risking our hearts to serve his people and fulfill the callings he has placed on us. Real life . . . abundant life . . . godly life is about loving Jesus and the people he allows us to rub shoulders with well—which means some days you’ll be stretched emotionally and physically. You’ll feel overextended. Thankfully God will expand our hearts and calendars to accommodate the calling. He is in the business of supplying us with new mercies every morning . . . new candles to burn, for more lives needing his light.

Recent Progress in Slow Sand and Alternative Biofiltration Processes Rolf Gimbel,Nigel Graham,M. Robin Collins.2006-03-31 Slow sand filtration is typically cited as being the first engineered process in drinking-water treatment. Proven modifications to the conventional slow sand filtration process, the awareness of induced biological activity in riverbank filtration systems, and the growth of oxidant-induced biological removals in more rapid-rate filters (e.g. biological activated carbon) demonstrate the renaissance of biofiltration as a treatment process that remains viable for both small, rural communities and major cities. Biofiltration is expected to become even more common in the future as efforts intensify to decrease the presence of disease-causing microorganisms and disinfection by-products in drinking water, to minimize microbial regrowth potential in distribution systems, and where operator skill levels are emphasized. *Recent Progress in Slow Sand and Alternative Biofiltration Processes* provides a state-of-the-art assessment on a variety of biofiltration systems from studies conducted around the world. The authors collectively represent a perspective from 23 countries and include academics, biofiltration system users, designers, and manufacturers. It provides an up-to-date perspective on the physical, chemical, biological, and operational factors affecting the performance of slow sand filtration (SSF), riverbank filtration (RBF), soil-aquifer treatment (SAT), and biological activated carbon (BAC) processes. The main themes are: comparable overviews of biofiltration systems; slow sand filtration process behavior, treatment performance and process developments; and alternative biofiltration process behaviors, treatment performances, and process developments.

The first chapter of this book takes a general description of nutrient solution used for hydroponics followed by an outline of in vitro hydroponic culture system for vegetables. Detailed descriptions on use of hydroponics in the context of scientific research into plants responses and tolerance to abiotic stresses and on the problems associated with the reuse of culture solution and means to overcome it are included. Some chapters provides information on the role of hydroponic technique in studying plant-microbe-environment interaction and in various aspects of plant biological research, and also understanding of root uptake of nutrients and thereof role of hydroponics in environmental clean-up of toxic and polluting agents. The last two chapters outlined the hydroponic production of cactus and fruit tree seedlings. Leading research works from around the world are brought together in this book to produce a valuable source of reference for teachers, researcher, and advanced students of biological science and crop production.
