Component-Based Software Engineering George Heineman, Ivica Crnkovic, Heinz W. Schmidt, Judith A. Stafford, Clemens Szyperski, Kurt Wallnau. 2005-05-03 On behalf of the Organizing Committee I am pleased to present the proceedings of the 2005 Symposium on Component-Based Software Engineering (CBSE). CBSE is concerned with the development of software-intensive systems from reusable parts (components), the development of reusable parts, and system maintenance and improvement by means of component replacement and c- tomization. CBSE 2005, “Software Components at Work,” was the eighth in a series of events that promote a science and technology foundation for achieving predictable quality in software systems through the use of software component technology and its associated software engineering practices. We were fortunate to have a dedicated Program Committee comprised of 30 internationally recognized researchers and industrial practitioners. We received 91 submissions and each paper was reviewed by at least three Program Committee members (four for papers with an author on the Program Committee). The entire reviewing process was supported by CyberChair Pro, the Web-based paper submission and review system developed and supported by Richard van de Stadt of Borbala Online Conference Services. After a two-day virtual Program Committee meeting, 21 submissions were accepted as long papers and 2 submissions were accepted as short papers.

Contagion Capitalism Sean Creaven. 2023-12-15 Contagion Capitalism situates the COVID-19 pandemic within the systems of global political economy and their attendant cultural modes and theorizes that these systems act as facilitators and drivers of global pandemic risk. Contagion Capitalism therefore critiques the institutionalized corporate-capitalist control of the economy, the state, and science, and the grave consequences this has on global public health policy, the ecological crisis of sustainability, and zoonotic pandemic events such as COVID-19. In doing so, this book addresses the failings of what may be termed as “state science” or “establishment science” in managing the pandemic, as personified especially by those elements of the scientific elite placed in the service of the neoliberal state. This book also explores the limitations of corporate pharmacological

technoscience in safeguarding public health, arguing that “Big Pharma” offers only partial remedies for problems of human illness and well-being, poses its own dangers to public health, and obfuscates the social bases of public ill-health and of pandemic risk. Contagion Capitalism further argues that COVID-19 will not be the last or even the most dangerous such epidemiological event. This is because the social production and global dissemination of zoonotic diseases is integral to contemporary capitalism, by virtue of its instrumental mode of science, its central dynamic of production for the sake of accumulation, and the consumer mode this sustains as its own condition of existence. These are the drivers of what may be termed as zoonotic accelerationism. Contagion Capitalism will appeal to scholars in the humanities and social sciences with interests in neoliberal ideology and global political economy, and their impact upon social, political and cultural life.

Handbook of Research on Contemporary Storytelling Methods Across New Media and Disciplines Mih?e?, Lorena Clara,Andreescu, Raluca,Dimitriu, Anda.2021-01-15 Stories are everywhere around us, from the ads on TV or music video clips to the more sophisticated stories told by books or movies. Everything comes wrapped in a story, and the means employed to weave the narrative thread are just as important as the story itself. In this context, there is a need to understand the role storytelling plays in contemporary society, which has changed drastically in recent decades. Modern global society is no longer exclusively dominated by the time-tested narrative media such as literature or films because new media such as videogames or social platforms have changed the way we understand, create, and replicate stories. The Handbook of Research on Contemporary Storytelling Methods Across New Media and Disciplines is a comprehensive reference book that provides the relevant theoretical framework that concerns storytelling in modern society, as well as the newest and most varied analyses and case studies in the field. The chapters of this extensive volume follow the construction and interpretation of stories across a plethora of contemporary media and disciplines. By bringing together radical forms of storytelling in traditional disciplines and methods of telling stories across newer media, this book intersects themes that include interactive storytelling and narrative theory across advertisements, social media, and knowledge-sharing platforms, among others. It is targeted towards professionals, researchers, and students working or studying in the fields of narratology, literature, media studies, marketing and communication, anthropology, religion, or film studies. Moreover, for interested executives and entrepreneurs or prospective influencers, the chapters dedicated to marketing and social media may also provide insights into both the theoretical and the practical aspects of harnessing the power of storytelling in order to create a cohesive and impactful online image.

ECOOP 2005 - Object-Oriented Programming Andrew Black.2005-07-18 The 19th Annual Meeting of the European Conference on Object-Oriented Programming—ECOOP 2005—took place during the last week of July in Glasgow, Scotland, UK. This volume includes the refereed technical papers presented at the conference, and two invited papers. It is traditional to preface a volume of proceedings such as this with a note that emphasizes the importance of the conference in its respective field. Although such self-evaluations should always be taken with a large grain of salt, ECOOP is undisputedly the pre-eminent conference on object-orientation outside of the United States. In its turn, object-orientation is today's principal technology not only for programming, but also for design, analysis and specification of software systems. As a consequence, ECOOP has expanded far beyond its roots in programming to encompass all of these areas of research—which is why ECOOP has remained such an interesting conference. But ECOOP is more than an interesting conference. It is the nucleus of a technical and academic community, a community whose goals are the creation and dissemination of new knowledge. Chance meetings at ECOOP have helped to spawn collaborations that span the boundaries of our many subdisciplines, bring together researchers and practitioners, cross cultures, and reach from one side of the world to the other. The ubiquity of fast electronic communication has made maintaining these collaborations easier than we would have believed possible only a dozen years ago. But the role of conferences like ECOOP in establishing collaborations has not diminished.

Arts of Living on a Damaged Planet Anna Lowenhaupt Tsing, Nils Bubandt, Elaine Gan, Heather Anne Swanson.2017-05-30 Living on a damaged planet challenges who we are and where we live. This timely anthology calls on twenty eminent humanists and scientists to revitalize curiosity, observation, and transdisciplinary conversation about life on earth. As human-induced environmental change threatens multispecies livability, *Arts of Living on a Damaged Planet* puts forward a bold proposal: entangled histories, situated narratives, and thick descriptions offer urgent "arts of living." Included are essays by scholars in anthropology, ecology, science studies, art, literature, and bioinformatics who posit critical and creative tools for collaborative survival in a more-than-human Anthropocene. The essays are organized around two key figures that also serve as the publication's two openings: Ghosts, or landscapes haunted by the violences of modernity; and Monsters, or interspecies and intraspecies sociality. Ghosts and Monsters are tentacular, windy, and arboreal arts that invite readers to encounter ants, lichen, rocks, electrons, flying foxes, salmon, chestnut trees, mud volcanoes, border zones, graves, radioactive waste—in short, the wonders and terrors of an unintended epoch. The CERT Oracle Secure Coding Standard for Java Fred Long, Dhruv Mohindra, Robert C. Seacord, Dean F. Sutherland, David Svoboda.2011-09-06

“In the Java world, security is not viewed as an add-on a feature. It is a pervasive way of thinking. Those who forget to think in a secure mindset end up in trouble. But just because the facilities are there doesn’t mean that security is assured automatically. A set of standard practices has evolved over the years. The Secure® Coding® Standard for Java™ is a compendium of these practices. These are not theoretical research papers or product marketing blurbs. This is all serious, mission-critical, battle-tested, enterprise-scale stuff.” —James A. Gosling, Father of the Java Programming Language

An essential element of secure coding in the Java programming language is a well-documented and enforceable coding standard. Coding standards encourage programmers to follow a uniform set of rules determined by the requirements of the project and organization, rather than by the programmer’s familiarity or preference. Once established, these standards can be used as a metric to evaluate source code (using manual or automated processes). The CERT® Oracle® Secure Coding Standard for Java™ provides rules designed to eliminate insecure coding practices that can lead to exploitable vulnerabilities. Application of the standard’s guidelines will lead to higher-quality systems—robust systems that are more resistant to attack. Such guidelines are required for the wide range of products coded in Java—for devices such as PCs, game players, mobile phones, home appliances, and automotive electronics. After a high-level introduction to Java application security, seventeen consistently organized chapters detail specific rules for key areas of Java development. For each area, the authors present noncompliant examples and corresponding compliant solutions, show how to assess risk, and offer references for further information. Each rule is prioritized based on the severity of consequences, likelihood of introducing exploitable vulnerabilities, and cost of remediation. The standard provides secure coding rules for the Java SE 6 Platform including the Java programming language and libraries, and also addresses new features of the Java SE 7 Platform. It describes language behaviors left to the discretion of JVM and compiler implementers, guides developers in the proper use of Java’s APIs and security architecture, and considers security concerns pertaining to standard extension APIs (from the javax package hierarchy). The standard covers security issues applicable to these libraries: lang, util, Collections, Concurrency Utilities, Logging, Management, Reflection, Regular Expressions, Zip, I/O, JMX, JNI, Math, Serialization, and JAXP.

Breastfeeding and Female Employment in Rural Java Marie Claire Rens.1980

Cyberspace in Peace and War Martin Libicki.2016-10-15 This book is written to be a comprehensive guide to cybersecurity and cyberwar policy and strategy, developed for a one- or two-semester class for students of public policy (including political science, law, business, etc.). Although written from a U.S. perspective, most of its contents are globally relevant. It is written essentially in four sections. The first (chapters 1 - 5) describes how compromises of computers and networks permit unauthorized parties to extract information from such systems (cyber-espionage), and/or to force these systems to misbehave in ways that disrupt their operations or corrupt their workings. The section examines notable hacks of systems, fundamental challenges to cybersecurity (e.g., the lack of forced entry, the measure-countermeasure relationship) including the role of malware, and various broad approaches to cybersecurity. The second (chapters 6 - 9) describes what government policies can, and, as importantly, cannot be expected to do to improve a nation’s cybersecurity thereby leaving leave countries less susceptible to cyberattack by others. Among its focus areas are approaches to countering nation-scale attacks, the cost to victims of broad-scale cyberespionage, and how to balance intelligence and cybersecurity needs. The third (chapters 10 - 15) looks at cyberwar in the context of military operations. Describing cyberspace as the 5th domain of warfare feeds the notion that lessons learned from other domains (e.g., land, sea) apply to cyberspace. In reality, cyberwar (a campaign of disrupting/corrupting computers/networks) is quite different: it rarely breaks things, can only be useful against a sophisticated adversary, competes against cyber-espionage, and has many first-strike characteristics. The fourth (chapters 16 - 35) examines strategic cyberwar within the context of state-on-state relations. It examines what strategic cyberwar (and threats thereof) can do against whom - and how countries can respond. It then

considers the possibility and limitations of a deterrence strategy to modulate such threats, covering credibility, attribution, thresholds, and punishment (as well as whether denial can deter). It continues by examining sub rosa attacks (where neither the effects nor the attacker are obvious to the public); the role of proxy cyberwar; the scope for brandishing cyberattack capabilities (including in a nuclear context); the role of narrative and signals in a conflict in cyberspace; questions of strategic stability; and norms for conduct in cyberspace (particularly in the context of Sino-U.S. relations) and the role played by international law. The last chapter considers the future of cyberwar.

Big Data Analysis: New Algorithms for a New Society Nathalie Japkowicz,Jerzy Stefanowski.2015-12-16 This edited volume is devoted to Big Data Analysis from a Machine Learning standpoint as presented by some of the most eminent researchers in this area. It demonstrates that Big Data Analysis opens up new research problems which were either never considered before, or were only considered within a limited range. In addition to

providing methodological discussions on the principles of mining Big Data and the difference between traditional statistical data analysis and newer computing frameworks, this book presents recently developed algorithms affecting such areas as business, financial forecasting, human mobility, the Internet of Things, information networks, bioinformatics, medical systems and life science. It explores, through a number of specific examples, how the study of Big Data Analysis has evolved and how it has started and will most likely continue to affect society. While the benefits brought upon by Big Data Analysis are underlined, the book also discusses some of the warnings that have been issued concerning the potential dangers of Big Data Analysis along with its pitfalls and challenges.
