Comparative Law Uwe Kischel.2019-02-21 Uwe Kischel's comprehensive treatise on comparative law offers a critical introduction to the central tenets of comparative legal scholarship. The first part of the book is dedicated to general aspects of comparative law. The controversial question of methods, in particular, is addressed by explaining and discussing different approaches, and by developing a contextual approach that seeks to engage with real-world issues and takes a practical perspective on contemporary comparative legal scholarship. The second part of the book offers a detailed treatment of the major legal contexts across the globe, including common law, civil law systems (based on Germany and France, and extended to Eastern Europe, Scandinavia, and Latin America, among others), the African context (with an emphasis on customary law), different contexts in Asia, Islamic law and law in Islamic countries (plus a brief treatment of Jewish law and canon law), and transnational contexts (public international law, European Union law, and *lex mercatoria*). The book offers a coherent treatment of global legal systems that aims not only to describe their varying norms and legal institutions but to propose a better way of seeking to understand how the overall context of legal systems influences legal thinking and legal practice.

The Demand for Life Insurance Wookjae Heo.2019-12-27 This book, adopting machine learning techniques for the financial planning field, explores the demand for life insurance as seen in previous literature and both estimates and predicts the demand for the adoption of life insurance using these techniques. Previous studies used diverse perspectives, like actuarial and life span, in order to understand the demand for life insurance, though these approaches have shown inconsistent findings. Employing two theoretical backgrounds—ecological systemic theory and artificial intellectual methodology—this book explores a better estimation and a prediction of the demand for life insurance and will be of interest to academics and students of insurance, financial planning, and risk management.

E-Voting Case Law Ardita Driza Maurer, Jordi Barrat.2016-03-09 E-voting is the use of electronic means in the casting of the vote at political elections or referendums. This book provides an overview of e-voting related case-law worldwide and explains how judicial decisions impact e-voting development. With contributions by renowned experts on thirteen countries, the authors discuss e-voting both from controlled environments, such as voting machines in polling stations, and uncontrolled ones, including internet voting. Each chapter examines a group of country-specific leading judicial decisions on e-voting and their likely impact on its future development. Reference is made to emerging standards on e-voting such as the Recommendation Rec(2004)11 of the Council of Europe, the only international instrument on e-voting regulation, and to other countries' case-law. The work provides a broader, informative and easily accessible perspective on the historical, political and legal aspects of an otherwise very technical subject, and contributes to a better understanding of the significance of case law and its impact in shaping e-voting's future development. The book will be significantly useful to anyone with an interest in e-voting, in particular decision makers and officials, researchers and academia, as well as NGOs and providers of e-voting solutions.

Global Positioning Systems, Inertial Navigation, and Integration Mohinder S. Grewal, Lawrence R. Weill, Angus P. Andrews. 2007-03-05 An updated guide to GNSS and INS, and solutions to real-world GPS/INS problems with Kalman filtering. Written by recognized authorities in the field, this second edition of a landmark work provides engineers, computer scientists, and others with a working familiarity with the theory and

contemporary applications of Global Navigation Satellite Systems (GNSS), Inertial Navigational Systems (INS), and Kalman filters. Throughout, the focus is on solving real-world problems, with an emphasis on the effective use of state-of-the-art integration techniques for those systems, especially the application of Kalman filtering. To that end, the authors explore the various subtleties, common failures, and inherent limitations of the theory as it applies to real-world situations, and provide numerous detailed application examples and practice problems, including GNSS-aided INS, modeling of gyros and accelerometers, and SBAS and GBAS. Drawing upon their many years of experience with GNSS, INS, and the Kalman filter, the authors present numerous design and implementation techniques not found in other professional references. This Second Edition has been updated to include: GNSS signal integrity with SBAS Mitigation of multipath, including results Ionospheric delay estimation with Kalman filters New MATLAB programs for satellite position determination using almanac and ephemeris data and ionospheric delay calculations from single and dual frequency data New algorithms for GEO with L1 /L5 frequencies and clock steering Implementation of mechanization equations in numerically stable algorithms To enhance comprehension of the subjects covered, the authors have included software in MATLAB, demonstrating the working of the GNSS, INS, and filter algorithms. In addition to showing the Kalman filter in action, the software also demonstrates various practical aspects of finite word length arithmetic and the need for alternative algorithms to preserve result accuracy.

Sustainable Logistics Wolf-Rüdiger Bretzke,Karim

Barkawi.2012-12-14 Currently the notion of sustainability is used in an inflationary manner. Therefore the authors start with a

definition which is stable to serve as an anchor for further research as well as for discussions among scientists, managers and politicians, ideally across different disciplines. The character of this book is purely conceptual. The argumentation is based on comparison of new and demanding requisites with existing models (process and network architectures in the field of logistics). Formerly neglected impacts on the environment will be included. Main features of a new approach will be developed which are capable to avoid these impacts and to align logistics with the requirements of sustainability. In order to make logistics sustainable large parts will have to be reinvented. The focus needs to be on decoupling transportation activities from economic growth rates.

Transparency in Insurance Contract Law

Pierpaolo Marano,Kyriaki Noussia.2020-03-11 This Volume of the AIDA Europe Research Series on Insurance Law and Regulation focuses on transparency as the guiding principle of modern insurance law. It consists of chapters written by leaders in the respective field, who address transparency in a range of civil and common law jurisdictions, along with overview chapters. Each chapter reviews the transparency principles applicable in the jurisdiction discussed. Whether expressly or impliedly, all jurisdictions recognize a duty on the part of the insured to make a fair presentation of the risk when submitting a proposal for cover to the insurers, although there is little consensus on the scope of that duty. Disputed matters in this regard include: whether it is satisfied by honest answers to express questions, or whether there is a spontaneous duty of disclosure; whether facts relating

to the insured's character, as opposed to the nature of the risk itself, are to be presented to the insurers; the role of insurance intermediaries in the placement process; and the remedy for breach of duty. Transparency is, however, a much wider concept. Potential policyholders are in principle entitled to be made aware of the key terms of coverage and to be warned of hidden traps (such as conditions precedent, average clauses and excess provisions), but there are a range of different approaches. Some jurisdictions have adopted a "soft law" approach, using codes of practice for pre-contract disclosure, while other jurisdictions employ the rather nebulous duty of (utmost) good faith. Leaving aside placement, transparency is also demanded after the policy has been incepted. The insured is required to be transparent during the claims process. There is less consistency in national legislation regarding the implementation of transparency by insurers in the context of handling claims.

Contextual Innovation Management Patrick van der Duin, Roland Ortt. 2020-02-17 Innovation has a pivotal role for companies in attaining business survival but making an organization innovative is not straightforward. By determining contextual factors, managers can help decide how to employ a portfolio of innovation management processes. This book explores how contingency influence the management of innovation. Taking the perspective of innovation managers, the authors focus on the decision-making process to demonstrate that different approaches are required depending on the business context. In breaking the process into three levels (culture, industry and company), the book helps choose an optimal innovative approach. With references to real-world innovation cases and organizations, this book will prove useful reading for students and researchers in the field of innovation studies and management.

The Innovation Machine Rolf-Christian Wentz. 2012-07-29

Innovation is critical for the survival of any enterprise. But most company leaders are still dissatisfied with the innovation management of their companies. Why is it so? In order to launch successful innovations like a high-performance machine on a sustainable basis, most companies have to transform themselves. What they need is an innovation management system whose components are consistent and, preferably, self-reinforcing. Vision, objectives, strategy, culture, process, structure & systems and competencies must be aligned. This book demonstrates how the world's best innovators such as Apple, Google, Microsoft, IBM, Toyota, Amazon, GE, Procter & Gamble, Samsung, BMW, 3M etc., which the author calls innovation machines, succeed at this. By means of various case studies and based on his own practical experience, the author describes how the use of the innovation management system will make your company successful, and he lays out the change management to transform your firm into an innovation machine. In doing this, he uses storytelling and the vivid language of a practitioner. The conclusions and main indicated actions at the end of each chapter plus worksheets and checklists support the practitioner in the

implementation. Praise for Die Innovationsmaschine (German edition): Rolf-Christian Wentz is exceptionally successful at describing his insights concerning the topic of innovation management ... and at deriving from them practical indicated actions. Ego Frank Schirrmacher. 2015-11-30 Twenty-five years after the end of the Cold War, a new Cold War is being waged in our societies. During the Cold War a theoretical model of man was developed by economists and the military, an egotistical being interested only in his own benefit and in duping his opponents to achieve his ends: a modern homo oeconomicus. After his career in the Cold War ended, he was not scrapped but adapted to the needs of the twenty-first century. He became the ringmaster of a new era of information capitalism. He sought to read, control and influence thoughts; to predict, price and eliminate risks. Today stock-market trading is guided by him. He uses computer algorithms and Big Data to build up detailed pictures of our preferences and then suggest and sell goods to us. The model has become a self-fulfilling prophecy. We are no longer the masters of our own fate. The Game of Life runs without us. Schirrmacher traces the progress of this extreme rationalization of social life from the Cold War games of the 1950s Rand Corporation to the stock-market trading techniques that brought about the financial crash of 2008, showing how these developments were interwoven with the rise of game theory, rational choice theory and neoliberal economics. The state and politics increasingly submitted themselves to the logic of computerized game theory and an economic view of the world, evading real decision-making in the process. In this brave new world individuals, alone in front of their computers, may think they are constructing a reality of their own choosing, but in fact they are being manipulated all along by others who are setting the rules of the game. This international bestseller by one of Germany's most distinguished journalists is a

powerful indictment of a way of thinking that has become pervasive and threatens to undermine not only parliaments and constitutions but also the sovereignty of the individual to be the person he or she wants to be.

Inertial Navigation Systems with Geodetic Applications

Christopher Jekeli.2012-10-25 This book covers all aspects of inertial navigation systems (INS), including the sensor technology and the estimation of instrument errors, as well as their integration with the Global Positioning System (GPS) for geodetic applications. Complete mathematical derivations are given. Both stabilized and strapdown mechanizations are treated in detail. Derived algorithms to process sensor data and a comprehensive explanation of the error dynamics provide not only an analytical understanding but also a practical implementation of the concepts. A self-contained description of GPS, with emphasis on kinematic applications, is one of the highlights in this book. The text is of interest to geodesists, including surveyors, mappers, and photogrammetrists; to engineers in aviation, navigation, guidance, transportation, and robotics; and to scientists involved in aerogeophysics and remote sensing.

öffentlichen Beschaffungsprozess und untersucht, weshalb die öffentlichen Einkäufer auf Nachhaltigkeitskriterien oftmals keine Rücksicht nehmen. Florian Hepperle erforscht, welche Hemmnisse einem Mehr an Nachhaltigkeit in der öffentlichen Beschaffung im Wege stehen. Im Gegensatz zu anderen Arbeiten rückt der Autor mögliche fördernde prozessuale Aspekte, die einen positiven Einfluss auf eine nachhaltigere Beschaffung haben können, in den Fokus seiner Untersuchung. Mit Hilfe der Strukturgleichungsmodellierung werden die aufgeworfenen Hypothesen empirisch getestet.

Media and Convergence Management Sandra Diehl, Matthias Karmasin. 2013-05-24 Convergence has gained an enormous amount of attention in media studies within the last several years. It is used to describe the merging of formerly distinct functions, markets and fields of application, which has changed the way companies operate and consumers perceive and process media content. This book's main purpose is to shed some light on crucial phenomena of media and convergence management, while also addressing more specific issues brought about by innovations related to media, technologies, industries, business models, consumer behavior and content management. This book gathers insights from renowned academic researchers and pursues a highly interdisciplinary approach. It will serve as a valuable reference guide for students, practitioners and researchers interested in media convergence processes.
