Aviation Psychology in Practice Neil Johnston,Nick McDonald.2017-09-29 This book seeks to extend the boundaries of aviation psychology in two interrelated ways: by broadening the focus of aviation psychology beyond the flight deck to the whole aviation system; and by discussing new theoretical developments which are shaping this applied discipline. A key feature of these theoretical advances is that they are grounded in a more developed, ecologically valid, understanding of practice. Among the issues addressed in this new integration of theory and practice are the following: what goes on in the flight deck is dependent on the wider organisational context; human factors issues in aircraft maintenance and grounding are critical to aviation safety; our capacity to learn from aviation accidents and incidents needs to be supported by more systematic human factors investigation and research; we must also develop our understanding of the human factors of accident survival as well as accident prevention; theories of crew coordination and decision making must be supported by an analysis of how decisions are actually made in the real world with all its stresses and constraints; training should be grounded in a thoroughgoing analysis of the complexity of the job and a full understanding of the training process itself. The text will be of interest to human factors researchers and practitioners in aviation and related areas. It will be of particular relevance to those who have a role in training, management or regulation throughout the aviation system.

Tate British Artists: J.M.W. Turner Sam Smiles.2014-05-06 J.M.W. Turner is probably the greatest painter Britain has ever produced. Both profoundly original and astonishingly prolific, he helped transform landscape painting into an expressive art form of enormous range and power. This book reveals the extent to which Turner wanted his paintings to communicate intellectually as well as emotionally; and how intensely involved he was with the culture of his times, using landscape as a vehicle for the deepest ruminations on society, politics and the human condition. Sam Smiles discusses and illustrates the whole range of Turner's work, tracking his career from the 1790s to the 1840s, exploring the themes that motivated him, and explaining his importance to subsequent generations. -- Publisher's description.

[Forgotten Heroes & Villains of Sand Creek](#) Carol Turner.2010-06-18 On November 29, 1864, Colonel John Chivington led a bloody and terrible raid on an encampment of Arapahos and Cheyennes who had come to the area believing they were on a path to peace. Before it was over, between 130 and 180 Native Americans had been massacred. This attack, known as the Sand Creek Massacre, is one of the most well-known and notorious events in Colorado's history. In *Forgotten Heroes and Villains of Sand Creek*, author Carol Turner turns an eye to the central characters, their histories and how they came to be part of this bloody episode. This fascinating look at such a pivotal event, its instigators and its martyrs includes the stories of John Chivington, an ambitious preacher with a streak of cruelty; Captain Silas Soule, a man who is still honored today by the Cheyenne and Arapaho tribes for his efforts in saving their ancestors; Ned Wynkoop, one of Soule's compatriots who had a change of heart regarding the tribes; Chief One Eye, a persuasive and charismatic medicine man; and many, many more.

Contemporary Topics in Molecular Immunology F. P. Inman, W. J. Mandy.2013-03-14 Included in this volume is a broad range of topics. Immunology is such a diverse field that many of the subspecialties overlap, and one finds it convenient and necessary to integrate information from several of them. We try to focus on the molecular aspects of immunology as much as is reasonable, but some contributions consist of a blend of molecular and cellular immunology and even immunopathology. This is as it should be, since information at the molecular level often provides an explanation of phenomena observed at other levels. Myelin basic protein holds the interest of immunologists because it is implicated in the induction of the autoimmune disease called experimental allergic encephalomyelitis (EAE). Although much biochemical and immunological information about this protein has been uncovered, it is not understood how such an inaccessible self-antigen can serve as the focal point in the central nervous system for myelin basic protein-specific EAE-inducing T cells. Day discusses the problem by first reviewing the sequences of the proteins from several species and the antigenicity of the proteins and peptides derived from them. The reader is then led into a thorough discussion of the immunological relationships that do and do not influence development of the encephalitis. From this discussion, the author promulgates the bystander model as the best overall mechanism to explain why different fragments of the highly conserved protein are needed by various species to give rise to the same type of localized central nervous system disease.
