Arado Ar 234 A J. Richard Smith,Eddie J. Creek.2006 The Arado Ar-234 was the first purpose-built jet bomber. Although the prototypes were completed largely by the end of 1941, delays in the supply of the engines meant that it was not until July 1943 that the type first flew. By the end of the war, more than 220 of the type had been constructed, although only a small proportion of these had actually entered service. The first of Midland Publishing's new 'Military Aircraft in Detail' series provides a detailed history of the development and operation of the Ar-234, supported by many photos, line drawings, and specially commissioned artworks. The camouflage schemes applied to the aircraft are also examined: many of the illustrations are previously unpublished, making the book an essential addition to the limited range of publications available on this important aircraft type. Aimed specifically at the aviation modeler and those interested in the history of the Luftwaffe, this first volume gets the new Military Aircraft in Detail series off to a good start and adds greatly to our knowledge of one of the most advanced aircraft which saw service during World War II.

Dragon's Wings Andreas Rupprecht.2013-09-26 As China continues its rise as a world power, there is growing interest in its military aviation. Very little has been published in the past on the subject because of the difficulty of obtaining information, but aviation authors Tony Buttler and Andreas Rupprecht have been researching this subject together for a number of years, both from the perspective of their interest in the Chinese aircraft and also through an interest in Chinese secret aviation projects. They have now amassed enough material to put together a book on Chinese fighter and bomber aircraft development since Mao's Communist Party took control of the country in 1949. The book examines the design and development of the country's major military combat aircraft (fighters, bombers, attack aircraft, antisubmarine) since the industry became established after the Second World War, plus a good number of design proposals which, for whatever reason, were rejected or abandoned. The text is supplemented with photographs, line drawings, and color artwork of the aircraft.

For every line drawing there is an accompanying photograph and explanatory text. This work takes you through the pre-war period, the Polish campaign, the war in northern Europe and western Europe in the spring of 1940, the Battle of Britain, the Russian front, the Mediterranean theatre, Defence of the Reich, and night fighters. Lesser-known sub-variants are also featured, such as the Messerschmitt 110s used in transport glider-towing duties. A comprehensive appendix takes the reader through the changes to each sub-variant by way of cutaway drawings. The colored artwork by Fernando Estanislau is simply breathtaking, and establishes him immediately in the top ranks of aviation artists. A 'must-have' for the Luftwaffe enthusiast and modeller alike.

McDonnell XP-67 "Moonbat" Steve Richardson, Peggy Mason. 2022-11-24 Packed with never-before-seen photos, plans and meticulous new digital artwork, this is the first history of the USAAF's futuristic World War II prototype interceptor, the XP-67 Moonbat. The series of X-planes that sprang from the US Army's Request for Data R40C, focused on high-altitude, high-speed, long-range bomber interceptors. Among these aircraft was the McDonnell Aircraft Company's first ever clean sheet design, the XP67. Its futuristic lines promised performance that it was ultimately unable to deliver, but development was still underway when disaster struck. Just before Army performance demonstration flights were scheduled to begin, an engine fire destroyed the only XP-67 prototype, leaving a host of unanswered questions about what might have been, and leading to decades of continuing fascination with the XP-67 among aviation buffs and aircraft modelers. The authors of this book have uncovered new sources of information and a wealth of photographs and line drawings that document not just the XP-67 but also its immediate precursors within the McDonnell Aircraft design community, as well as alternative configurations for unbuilt variants aimed at different missions. Packed with unpublished photos of all stages of construction including key airframe changes made after initial flight tests, showing in detail how the final configuration was evolved, this volume finally provides clear focus on a story that has long been shrouded in mystery.
