Inelastic Analysis of Solids and Structures M. Kojic, Klaus-Jürgen Bathe. 2006-03-30 *Inelastic Analysis of Solids and Structures* presents in a unified manner the physical and theoretical background of inelastic material models and computational methods, and illustrates the behavior of the models in typical engineering conditions. The book describes experimental observations and principles of mechanics, and efficient computational algorithms for stress calculations as typically performed in finite element analysis. The theoretical background is given to an extent necessary to describe the commonly employed material models in metal isotropic and orthotropic plasticity, thermoplasticity and viscoplasticity, and the plasticity of geological materials. The computational algorithms are developed in a unified manner with some detailed derivations of the algorithmic relations. Many solved examples are presented, which are designed to give insight into the material behavior in various engineering conditions, and to demonstrate the application of the computational algorithms.

Egon Schiele's Portraits Alessandra Comini.2014-08 Egon Schiele was a meteor that flashed across the galaxy of Viennese art at the beginning of the last century. Although he lived only twenty-eight years-dying quite suddenly of influenza in 1918 just as World War I came to an end-he left a stunning pictorial oeuvre. Schiele's obsession with sexuality, his own and that of others, made him at once a voyeur and a participant in that sexual imperative which Freud was simultaneously plumbing with such unsettling results. The disturbing revelations of Schiele's unmasking portraiture and of the new science of psychology disclosed a collective cultural anxiety during the last years of the crumbling Austrian empire. As a seer into the souls of his sitters, Schiele redefined portraiture in the age of Angst. Alessandra Comini is University Distinguished Professor of Art History Emerita at Southern Methodist University, where she taught for thirty-one years after having served on the faculty at Columbia University for ten years. She is the author of eight books, one of which, *Egon Schiele's Portraits*, was nominated for the National Book Award. The Republic of Austria extended her its Grand Decoration of Honor in 1990. This is her third book on the artist; she has also published *Schiele in Prison*, an extended essay and English translation of the 1912, makeshift diary Schiele kept during his twenty-four days in a provincial prison cell-a forgotten cell which she discovered and photographed in 1963. The cell is now part of a Schiele Museum in the village of Neulengbach. Her 2014 Megan Crespi mystery novel, *Killing for Klimt*, is followed by *The Schiele Slaughters*.

A New Biology for the 21st Century National Research Council,Division on Earth and Life Studies,Board on Life Sciences,Committee on a New Biology for the 21st Century: Ensuring the United States Leads the Coming Biology Revolution.2009-11-20 Now more than ever, biology has the potential to contribute practical solutions to many of the major challenges confronting the United States and the world. A New

Biology for the 21st Century recommends that a New Biology approach—one that depends on greater integration within biology, and closer collaboration with physical, computational, and earth scientists, mathematicians and engineers—be used to find solutions to four key societal needs: sustainable food production, ecosystem restoration, optimized biofuel production, and improvement in human health. The approach calls for a coordinated effort to leverage resources across the federal, private, and academic sectors to help meet challenges and improve the return on life science research in general.

This is the first book in the Black Hole collection of short poetry books. Each book in the black hole series can be read as a standalone.

Kissing Architecture Sylvia Lavin.2011-05-09 Architecture's growing intimacy with new types of art Kissing Architecture explores the mutual attraction between architecture and other forms of contemporary art. In this fresh, insightful, and beautifully illustrated book, renowned architectural critic and scholar Sylvia Lavin develops the concept of kissing to describe the growing intimacy between architecture and new types of art—particularly multimedia installations that take place in and on the surfaces of buildings—and to capture the sensual charge that is being designed and built into architectural surfaces and interior spaces today. Initiating readers into the guilty pleasures of architecture that abandons the narrow focus on function, Lavin looks at recent work by Pipilotti Rist, Doug Aitken, the firm Diller Scofidio + Renfro, and others who choose instead to embrace the viewer in powerful affects and visual and sensory atmospheres. Kissing Architecture is the first book in a cutting-edge new series of short, focused arguments written by leading critics, historians, theorists, and practitioners from the world of urban development and contemporary architecture and design. These books are intended to spark vigorous debate. They stake out the positions that will help shape the architecture and urbanism of tomorrow. Addressing one of the most spectacular and significant developments in the current cultural scene, Kissing Architecture is an entertainingly irreverent and disarmingly incisive book that offers an entirely new way of seeing--and experiencing--architecture in the age after representation.

The famous naturalist brings a humanist?s vision to this superbly written book. *On Becoming a Biologist* is grounded in reality, cognizant of practical matters (education and jobs) as well as the ideals that inform the profession?a reverence for life and a responsibility to humankind and its future. Janovy draws on his experiences as a graduate and postdoctoral student, on his rewarding relationships with teachers, and on his fieldwork as a naturalist.
