The Bluest Eye Toni Morrison.2007-05-08 NATIONAL BESTSELLER • From the acclaimed Nobel Prize winner—a powerful examination of our obsession with beauty and conformity that asks questions about race, class, and gender with characteristic subtlety and grace. In Morrison’s acclaimed first novel, Pecola Breedlove—an 11-year-old Black girl in an America whose love for its blond, blue-eyed children can devastate all others—prays for her eyes to turn blue: so that she will be beautiful, so that people will look at her, so that her world will be different. This is the story of the nightmare at the heart of her yearning, and the tragedy of its fulfillment. Here, Morrison’s writing is “so precise, so faithful to speech and so charged with pain and wonder that the novel becomes poetry” (The New York Times).

Evolutionary Cognitive Neuroscience Steven Platek,Julian Keenan,Todd Shackelford.2007 An essential reference for the new discipline of evolutionary cognitive neuroscience that defines the field's approach of applying evolutionary theory to guide brain-behavior investigations. Since Darwin we have known that evolution has shaped all organisms and that biological organs—including the brain and the highly crafted animal nervous system—are subject to the pressures of natural and sexual selection. It is only relatively recently, however, that the cognitive neurosciences have begun to apply evolutionary theory and methods to the study of brain and behavior. This landmark reference documents and defines the emerging

field of evolutionary cognitive neuroscience. Chapters by leading researchers demonstrate the power of the evolutionary perspective to yield new data, theory, and insights on the evolution and functional modularity of the brain. Evolutionary cognitive neuroscience covers all areas of cognitive neuroscience, from nonhuman brain-behavior relationships to human cognition and consciousness, and each section of Evolutionary Cognitive Neuroscience addresses a different adaptive problem. After an introductory section that outlines the basic tenets of both theory and methodology of an evolutionarily informed cognitive neuroscience, the book treats neuroanatomy from ontogenetic and phylogenetic perspectives and explores reproduction and kin recognition, spatial cognition and language, and self-awareness and social cognition. Notable findings include a theory to explain the extended ontogenetic and brain development periods of big-brained organisms, fMRI research on the neural correlates of romantic attraction, an evolutionary view of sex differences in spatial cognition, a theory of language evolution that draws on recent research on mirror neurons, and evidence for a rudimentary theory of mind in nonhuman primates. A final section discusses the ethical implications of evolutionary cognitive neuroscience and the future of the field. Contributors: C. Davison Ankney, Simon Baron-Cohen, S. Principles of Psychology Marc Breedlove. 2015 Organized around four well-established core principles, *Principles of Psychology* provides students with a framework to understand the science of behavior. Written in a conversational style, the text is organized around the following four well-established principles that serve as touchstones for the field of psychology: --The mind is a process at work in a physical machine, the brain. --We are consciously aware of only a fraction of our mental activity. --We constantly modify our behavior, beliefs, and attitudes according to what we perceive about the people around us. --Experience physically alters the structure and function of the brain. With these four principles as a framework for the text, *Principles of Psychology* emphasizes that psychology is a science through discussion of relevant big-picture and proven concepts and cutting-edge research-based investigations that examine behavioral, psychological, and neuroscience experiments. By presenting data and facts from other scientific disciplines, as well as real-world vignettes and stories, Marc Breedlove teaches the reader how to think critically and scientifically about the underlying mechanisms of behavior. In-Text Features --Vignette: Each chapter begins with a story, an instance when behavior has a big impact on someone's life. The chapter returns to the vignette several times as we cover findings that relate to that particular case. --Researchers at Work: In every chapter, important discoveries are explained and illustrated to highlight the process of experimentation and hypothesis testing. Over the course of the book, the progression of experiments provides an increasingly sharper picture of the factors shaping behavior. --Skeptic at Large: Intended to sharpen the student's critical thinking skills, these boxes explore a widespread misconception and demonstrate how scientific research disproves it. The exploration of scientific experimentation also reinforces the Researchers at Work feature. --Psychology in Everyday Life: These are topics where knowledge of psychology might be applicable to everyday life, such as whether people with schizophrenia are violent, the importance of blind auditions for musicians, how to stop smoking, or how conditioned taste aversion might cause you to stop eating sushi when you used to love it. --The Cutting Edge: Just prior to the end of every chapter, this feature explores an exciting report of current research. Showing students these vibrant and bold experiments will emphasize that psychology research remains alive and well. --Think Like a Psychologist: Principles in Action: To close each chapter, each principle is related back to the vignette to show the student that when they observe an interesting behavior they can recall and apply the four principles. If they can do this, they will indeed be thinking like a psychologist.
